

SECTION 900 – MATERIALS DETAILS**SECTION 901 – PCC MATERIALS****901.01 Hydraulic Cement****(a) General**

At the time cement is incorporated into the work, it shall meet the quality requirements of these specifications.

10 Cement which has been in storage may be tested prior to use, and if tests show that it does not meet the requirements specified, it will be rejected.

A means for storing and protecting the cement against dampness shall be provided. Cement which has become partially set or which contains lumps or caked cement will be rejected. Cement salvaged from discarded or used sacks shall not be used.

20 Different kinds or brands of cement, or cement of the same brand from different mills, even if tested and approved, shall not be mixed during use unless permitted, and then only as directed. They shall not be used alternately in any one pour for any structure, unless otherwise permitted.

(b) Portland Cement

Portland cement shall conform to the requirements of the following cited specifications except as noted.

1. Requirements**Cement Specifications**

30 Air-Entraining Portland Blast-Furnace
 Slag Cement.....AASHTO M 240, Type ISA
 Air-Entraining Portland Cement.....AASHTO M 85, Type IA or IIIA
 Air-Entraining Portland-Pozzolan
 Cement..... AASHTO M 240, Type IP-A
 Portland Blast-Furnace Slag Cement..... AASHTO M 240, Type IS
 Portland Cement AASHTO M 85, Type I, II, or III
 Portland-Pozzolan Cement AASHTO M 240, Type IP
 Slag Modified Portland Cement, Type ISM AASHTO M 240

40 The exceptions to AASHTO M 240 are as follows:

- a. The amount of pozzolan shall be limited to $20\% \pm 5\%$ by weight of the portland-pozzolan cement for the types IP and IP-A.

- b. The pozzolan in the portland-pozzolan cements, types IP and IP-A, shall be in accordance with ASTM C 618, class C or class F with the loss on ignition of the pozzolan limited to a maximum of 3%.

50

- c. The pozzolan in the portland-pozzolan cements, types IP and IP-A, shall be interground with the portland cement clinker.

2. Acceptance Criteria

Portland cements and blended cements will be accepted based upon the manufacturer's or manufacturer/distributor's documented ability to consistently furnish these materials in accordance with the applicable AASHTO requirements.

a. General Requirements

- 60 Cements shall comply with the applicable requirements of 901 and will be accepted by certification from qualified manufacturers or manufacturer/distributor. The manufacturer is defined as the plant producing the cement. A manufacturer or manufacturer/distributor shall become qualified by establishing a history of satisfactory quality control of cement produced as evidenced by results of tests performed by a testing laboratory which is regularly inspected by the Cement and Concrete Reference Laboratory of the National Institute of Standards and Technology. Proof of such inspection shall be furnished upon request. All certifications shall be prepared by the manufacturer or distributor in accordance with the applicable requirements of 916. If a manufacturer or distributor elects to supply
- 70 portland cement with a higher sulfur trioxide content in accordance with footnote B from Table 1 in AASHTO M 85, it shall supply all of the required supporting data to the Materials and Tests Division prior to supplying such cement. A list of Qualified Manufacturers and Manufacturer/Distributors will be maintained by the Department.

The manufacturer or manufacturer/distributor shall conduct sufficient tests to ensure that adequate quality control is maintained and that cement furnished is in accordance with the specification requirements. Documentation pertaining to cement shipped on certification shall be maintained for a period of at least three years and shall be provided when requested.

80

Random samples of cement will be obtained at the concrete plant. If the sample is not in accordance with the specification requirements, an investigation will be conducted. A copy of the findings and conclusions resulting from the investigation will be furnished to the Contractor. Unless the investigation finds the Department is responsible for the failure to comply, the cost of the investigation plus any required corrective action will be assessed to the Contractor.

b. Requirements for Domestic Source Qualification

- 90 Cement manufacturers requesting to be qualified to supply cement shall provide the following:

- (1) For the initial qualification, the manufacturer shall provide to the Materials and Tests Division a QCP in accordance with the applicable requirements of ITM 806. The QCP shall also include the location and type of samples taken, and a monthly summary of mill test data for the previous years production. A current Material Safety Data Sheet shall be submitted as an integral part of the initial qualification package.

100

- (2) To maintain qualification, a monthly average of mill test data shall be submitted to the Materials and Tests Division. If a specific type of cement is not manufactured in a given month, the monthly submittal shall state "No type _____ cement was manufactured during the month of _____ 20____".

c. Requirements for Foreign Source Qualification

Foreign cement manufacturers or their domestic distributors requesting to be
 110 qualified to supply cement shall provide the following:

- (1) For the initial qualifications, the manufacturer and distributor shall provide to the Materials and Tests Division a QCP in accordance with the applicable requirements of ITM 806. The QCP shall also include the location and type of samples taken, and a summary of complete test results from the proposed cement source. A current Material Safety Data Sheet shall be submitted as an integral part of the initial qualification package. The QCP must explain the linkage between the cement being furnished and the manufacturer's/distributor's quality control data, relative to ship-loads, barge-loads, railroad car-loads, etc.

120

- (2) Once the initial qualifications have been met, the manufacturer or distributor shall be required to furnish the cement test results for each shipment prior to Department cement usage for the first five cement shipments, which are intended for Department use. The test results for all five of these cement shipments must fully comply with the required material specifications. If not, this requirement will be continued for subsequent cement shipments until five consecutive cement shipment test results fully comply with the required material specifications, or Department source approval is withdrawn due to the inability to consistently supply satisfactory cement.

130

140

- (3) To maintain qualification after compliance with the previous requirements, a monthly submission of all cement shipment test results for cement which is intended for Department usage shall be submitted to the Materials and Tests Division. If no cement shipments are received during a given month, the monthly submittal shall state "No cement was received during the month of _____, 20____".

d. Certification

150

Only qualified manufacturers and manufacturer/distributors as identified by the Department's list of Qualified Manufacturers and Manufacturer/Distributors may furnish cement on certification.

A sample certification form addressing all of the required information is included in ITM 804. Alternate procedures and forms will be considered when requested, and will be approved if there is a positive link between the cement furnished and the manufacturer's quality control data.

(c) Masonry Cement

160

Masonry cement shall be in accordance with ASTM C 91, except the air content test and the water retention test may be waived.

901.02 Fly Ash Used as a Pozzolan

(a) General

Fly ash is the finely divided residue that results from the combustion of ground or powered coal. In general, class F fly ash is produced from burning anthracite or bituminous coal and class C fly ash is produced from burning lignite or subbituminous coal.

170

Fly ash will be accepted from one of the sources on the Department's list of approved Fly Ash and Ground Granulated Blast Furnace Slag Sources. Fly ash from different sources or different types of fly ash shall not be mixed or used alternately in the same construction unless authorized in writing. Fly ash will be subject to random assurance sampling and testing by the Department. Failure of these random samples to meet the specified requirements will be cause for suspension of the fly ash source approval.

(b) Acceptance Criteria

180

Acceptance is based upon the supplier's documented ability to consistently furnish material in accordance with the specified requirements.

1. Requirements

The fly ash shall be in accordance with AASHTO M 295 for class C or class F, with the following exceptions:

Loss on Ignition (LOI), Maximum %.....	3
Autoclave Expansion or Contraction, Maximum %.....	0.5
Fineness: Amount retained when wet-sieved on No. 325 (45 µm) sieve, Maximum %.....	30

- 190 On days when fly ash is being accumulated for use as a pozzolan, the supplier shall obtain a minimum of one sample per day and furnish test results for moisture content, loss on ignition, and No. 325 (45 µm) sieve residue for each sample.

For each 2,000 t (1800 Mg) produced, a complete AASHTO M 295 analysis shall be performed on a sample composited randomly from the daily samples. The method of randomization shall be subject to approval by the Department.

2. Test and Calibration Procedure

- 200 The testing procedures followed shall be in accordance with ASTM C 311 or other methods approved in writing by the Department.

The minimum frequency for calibration of test equipment is:

- a. The No. 325 (45 µm) sieve shall be calibrated every 100 determinations or every six months, whichever comes first.
- b. The muffle furnace used for LOI determinations shall have a newly installed thermocouple every six months.
- 210 c. The analytical balances and scales shall be calibrated each year.
- d. The concrete compression machine shall be calibrated annually.
- e. The Blaine apparatus shall be calibrated annually.
- f. All instrumentation used for rapid chemical analysis shall comply with applicable requirements of ASTM C 114 using NIST Fly Ash reference materials.

220

3. Documentation

Fly ash suppliers requesting approval shall supply the following:

- a. For the initial approval, a current Materials Safety Data Sheet and a summary of results for all specified tests for six

consecutive months shall be submitted. No test results shall be more than one year old at the time of request.

- 230 b. To maintain approval, a summary of results for all specified tests shall be submitted monthly. The results of the daily tests shall be available by telephone during normal working hours.
- c. The fly ash suppliers shall furnish a QCP in accordance with the applicable requirements of ITM 806. The QCP shall ensure the Department of a continuous supply of fly ash complying with the requirements. This QCP will be reviewed to determine its adequacy.
- 240 d. Certification:
- (1) For source approval, the supplier shall furnish a certification indicating the class of fly ash, the name, location, and unit of the generating plant. It shall state that all fly ash shipped for use on Department projects will be produced under appropriate quality control and shall be in accordance with the specified requirements. It shall further indicate that the power company will participate in appropriate inspection and assurance testing. A sample certification form is set out in ITM 804.
- 250 (2) For certification of test reports, the test results generated in accordance with 901.02(b)1 shall be summarized and submitted monthly. The reports shall state the name and location of the testing facility, and shall be signed by the chemist or technical manager. This certification shall also identify the concrete plants receiving fly ash represented by these results.

901.03 Ground Granulated Blast Furnace Slag Used As a Pozzolan

260

(a) General

Blast furnace slag shall consist of the non-metallic product, consisting essentially of silicates and aluminosilicates of calcium and other bases, that is developed in a molten condition simultaneously with iron in a blast furnace. A glassy granular material is formed when molten blast furnace slag is rapidly chilled by immersion in water. This material is then ground to cement fineness, producing ground granulated blast furnace slag.

- 270 Ground granulated blast furnace slag will be accepted from one of the sources on the Department's list of approved Fly Ash and Ground Granulated Blast Furnace Slag Sources. Ground granulated blast furnace slag from different sources or

different grades of ground granulated blast furnace slag shall not be mixed or used alternately in the same construction unless approved in writing. Ground granulated blast furnace slag will be subject to random assurance sampling and testing by the Department. Failure of these random samples to be in accordance with the specified requirements will be cause for suspension of ground granulated blast furnace slag source approval.

(b) Acceptance Criteria

- 280 Ground granulated blast furnace slag will be accepted based on the manufacturer's or manufacturer/distributor's documented ability to consistently furnish these materials in accordance with the applicable ASTM and AASHTO requirements.

1. Requirements

The ground granulated blast furnace slag shall be in accordance with ASTM C 989 for grade 100 or 120.

- 290 For each 2,000 t (1800 Mg) produced, a complete ASTM C 989 analysis shall be performed on a sample composited randomly from the daily samples. The method of randomization shall be subject to approval by the Department.

2. Test and Calibration Procedure

The testing procedures followed shall be in accordance with ASTM C 989 or other methods approved in writing by the Department.

The minimum frequency for calibration of test equipment is:

- 300
- a. The No. 325 (45 μm) sieve shall be calibrated every 100 determinations or every six months, whichever comes first.
 - b. The analytical balances and scales shall be calibrated each year.
 - c. The concrete compression machine shall be calibrated annually.
 - d. The Blaine apparatus shall be calibrated annually.
- 310
- e. All instrumentation used for rapid chemical analysis shall be in accordance with the applicable requirements of ASTM C 114 using NIST reference materials.

3. Documentation

Ground granulated blast furnace slag suppliers requesting approval shall supply the following:

- 320 a. For the initial approval, a current Materials Safety Data Sheet and a summary of results for all specified tests for six consecutive months shall be submitted. No test results shall be more than one year old at the time of request.
- b. To maintain approval, a summary of results for all specified tests shall be submitted monthly. The results of the daily tests shall be available by telephone during normal working hours.
- 330 c. The ground granulated blast furnace slag suppliers shall furnish a QCP in accordance with the applicable requirements of ITM 806. The QCP shall ensure the Department of a continuous supply of ground granulated blast furnace slag which is in accordance with the requirements. This QCP will be reviewed to determine its adequacy.
- d. Certification:
- 340 (1) For source approval, the supplier shall furnish a certification indicating the grade of ground granulated blast furnace slag, the name, location, and type of manufacturing facility. It shall state that the ground granulated blast furnace slag shipped for use on Department projects will be produced under appropriate quality control and shall be in accordance with the specified requirements. A sample certification form addressing all of the required information is included in ITM 804.
- 350 (2) For certification of test reports, the test results generated in accordance with 901.03(b) shall be summarized and submitted monthly. The reports shall state the name and location of the testing facility, and shall be signed by the chemist or technical manager. This certification shall also identify the concrete plants receiving ground granulated blast furnace slag represented by these results.

901.04 Silica Fume Used As a Pozzolanic Mineral Admixture

(a) General

360 Silica fume will be accepted from one of the suppliers on the Department's list of approved Pozzolanic Suppliers. Silica fume from more than one of these suppliers shall not be mixed or used alternatively in the same construction unless authorized in writing. Silica fume will be subject to random assurance sampling and testing by the Department. Failure of the random samples to meet the specified requirements will be cause for suspension of the silica fume supplier's approval.

(b) Acceptance Criteria

Acceptance of silica fume will be based on the manufacturer's documented ability to consistently furnish material in accordance with the specified requirements.

1. Requirements

The silica fume shall be in accordance with AASHTO M 307 with the following exceptions:

- a. Reactivity with cement alkalies shall not be required.
- b. The oversize, amount retained on the No 325 (45 μ m) sieve, in accordance with ASTM C 1240, shall be conducted.
- c. The oversize, amount retained on the No. 325 (45 μ m) sieve, shall not be more than 10%.
- 380 d. Accelerated pozzolanic activity index, in accordance with ASTM C 1240, shall be conducted in lieu of strength activity index.
- e. The accelerated pozzolanic activity index shall be a minimum of 85% at seven days.
- f. The increase of drying shrinkage of mortar bars at 28 days shall be conducted in accordance with ASTM C 1240.
- 390 g. The increase of drying shrinkage of mortar bars at 28 days shall be not more than 0.10%.

2. Frequency of Testing

- a. The manufacturer shall obtain a minimum of one sample for each 400 t (400 Mg) of material produced. Test results for moisture content, and loss on ignition, shall be furnished for each sample.
- 400 b. For each 2000 t (2000 Mg) produced, a complete AASHTO M 307 analysis shall be performed on a sample composed randomly from daily samples. The method of randomization shall be subject to approval by the Department. The optional chemical requirements identified in AASHTO M 307 shall be reported in addition to the increase of drying shrinkage of mortar bars as well as the standard chemical and physical requirements.

3. Test and Calibration Procedure

410 The minimum frequencies for calibration of test equipment shall be as follows:

- a. The analytical balances and scales shall be calibrated annually.
- b. The concrete compression machine shall be calibrated annually.
- c. The Blaine apparatus shall be calibrated annually.
- d. All instrumentation used for rapid chemical analysis shall be in accordance with AASHTO T 105.

420

4. Documentation

Silica fume suppliers requesting approval shall supply the following to the Materials and Tests Division:

- a. For initial approval, a current Material Safety Data Sheet and a summary of results for all specified tests for six consecutive months shall be submitted. No test results shall be more than one year old at the time of the request.
- b. To maintain approval, a summary of results for all specified tests shall be submitted monthly.
- c. A QCP in accordance with the applicable requirements of ITM 806 shall be submitted. The QCP shall ensure the Department a continuous supply of silica fume complying with the material requirements and calibration procedures. This QCP will be reviewed by the Materials and Tests Division to determine its adequacy.
- d. Certification:
 - (1) For approval, the supplier shall furnish a certification indicating the name, location, and type of manufacturing facility, which includes the metallurgical process and furnace. It shall state that the silica fume shipped for use on Department projects will be produced under appropriate quality control and shall be in accordance with the specified requirements. A sample certification is set out in ITM 804.
 - (2) For certification of test reports, the results generated in accordance with 901.04(b) shall be summarized and submitted monthly. The reports shall state the name and

430

440

450

location of the testing facility, and shall be signed by the chemist or technical manager. This certification shall also identify the concrete plants receiving silica fume represented by these results.

460 **901.05 Chemical Anchor System**

Chemical anchor systems shall be furnished from the Department's list of approved Chemical Anchor Systems. Chemical anchor systems may be added to the approved list by completing the requirements of ITM 806, Procedure F and passing required laboratory testing.

(a) Requirements

Chemical anchor systems shall be in accordance with the following:

- 470 1. Chemical anchor systems shall be two part systems which are capable of anchoring deformed steel reinforcing bars and grouting load transfer dowels.
2. Chemically anchored steel reinforcing bars shall be capable of withstanding a tensile load equal to the yield strength of a #7 (#22), grade 60 (400), epoxy coated, deformed steel reinforcing bar.
- 480 3. Chemical anchor systems shall be capable of filling the entire annular space between the concrete and the steel reinforcing bar or dowel and remain in place until the chemical anchor is completely cured.

(b) Laboratory Testing

The Department will test chemical anchor systems in accordance with ITM 807.

901.06 PCC Sealer/Healers

PCC sealer/healers shall be furnished from the Department's list of approved PCC Sealer/Healers. PCC sealer/healers may be added to the approved list by completing the requirements in ITM 806, Procedure F and passing required
490 laboratory testing.

(a) Requirements

PCC sealer/healers shall be in accordance with the following:

1. PCC sealer/healers shall be two part systems, capable of sealing and healing cracks in PC pavement.
2. PCC sealer/healers shall be capable of restoring the original integrity of a PCC beam broken in flexure.

3. All four beams used for testing sealer/healers shall break at a location different from the original break or with a flexural strength greater than or equal to 550 psi (3800 kPa).
4. The viscosity of PCC sealer/healers shall be sufficient to penetrate a crack 1/32 in. (0.8 mm) wide and 6 in. (150 mm) in depth.

(b) Laboratory Testing

The Department will test PCC sealer/healers in accordance with ITM 808.

510

901.07 Rapid Setting Patch Materials

Rapid setting patch materials shall be selected from the Department's list of approved Rapid Setting Patch Materials. A rapid setting patch material may be added to the approved list by completing the requirements in ITM 806, Procedure F.

(a) Normal Weather Mixes

Normal weather rapid setting patch materials shall be used for ambient temperatures of 32 - 85°F (0 - 30°C).

520

(b) Hot Weather Mixes

Hot weather rapid setting patch materials shall be used for ambient temperatures above 85°F (30°C).

(c) Requirements

Rapid setting patch materials shall be capable of being utilized in patches ranging from 1 in. (25 mm) to full depth without bonding agents, no curing material shall be required, and shall be capable of being surface sealed with an epoxy sealer.

530 These products shall not contain soluble chlorides as an ingredient of manufacture nor shall they require chemical additives. The color shall be similar to PCC.

They shall be single packaged dry mix requiring only water just prior to mixing. They shall be packaged in 40 – 60 lb (18 – 27 kg) bags with a neat yield of approximately 0.40 cu yd (0.011 m³) and shall allow at least a 50% extension, by weight (mass) with a 3/8 in. (10 mm) or a 1/2 in. (13 mm) round aggregate. The minimum shelf life shall be twelve months.

540 Mixing shall be conducted with small concrete mixers or with a drill or paddle mixer and shall be suitable for finishing with hand tools.

Rapid setting patch materials shall be in accordance with ASTM C 928 with the following exceptions.

	<u>Physical Test</u>	<u>Specification</u>	<u>Requirement</u>
	Setting Time	ASTM C 266	
550	Normal Weather	Initial at 72°F (22°C)	10 – 20 min
		Final at 72°F (22°C)	12 – 35 min
	Hot Weather	Initial at 95°F (35°C)	10 – 20 min
		Final at 95°F (35°C)	12 – 35 min
560	Compressive Strength, Min*	AASHTO T 109	72°F (22°C), Normal
	1 h		2000 psi (14 MPa)
	2 h		3000 psi (21 MPa)
	24 h		5000 psi (34.5 MPa)
	28 day		8000 psi (55 MPa)
	Compressive Strength, Min*	ASTM C 109	95°F (35°C), Hot
	3 h		3000 psi (21 MPa)
	24 h		5000 psi (34.5 MPa)
	28 days		8000 psi (55 MPa)
	Relative Dynamic Modulus Procedure B 300 cycles	ASTM C 666	95% Min.
570	Slant Shear Bond Strength, Min.	ASTM C 882	
	28 days		2500 psi (17 MPa)
	Flexural Strength, 24 h	ASTM C 78	
	mortar only		500 psi (3.5 MPa)
	mortar – aggregate extension		600 psi (4.0 MPa)
	Shrinkage, Max.	ASTM C 157	
	28 days		0.03%
580	Scaling Resistance	ASTM C 157	
	5 cycles		0 rating, No scale
	25 cycles		0 rating, No scale
	50+ cycles		1.5 rating, Lt. scale

* Material used shall be neat rapid setting patch material mixed in accordance with the manufacturer's installation instructions.

590 All rapid setting patch materials complying with the specified physical requirements will be subjected to a field performance demonstration. The field performance demonstration will take place as directed. Rapid setting patch materials shall be used to patch a designated site, typical of a standard repair. The site will be

evaluated after one year's exposure. Approval will be based on visible signs of distress, such as cracking, crazing, scaling, spalling, wearing, edge fraying, corner cracking, or debonding.

(d) Test Report

Testing shall be performed by a recognized laboratory in accordance with ITM 806. Test reports shall not be more than five years old on January first of the approval year.

600

901.08 Packaged, Dry, Combined Materials for Mortar and Concrete

These materials shall be in accordance with ASTM C 387. All packages shall be identified as conforming to ASTM C 387. The markings shall also show the kind and type of material, the net weight in each bag, the yield in cubic feet (cubic meters) or yield in square feet per inch (square meters per millimeter) of thickness, and the amount of water recommended for mixing to produce a 2 in. to 3 in. (50 mm to 75 mm) slump.

SECTION 902 – ASPHALT MATERIALS

902.01 Asphalt

Asphalt is defined as a cementitious material obtained from petroleum processes. Asphalts shall be sampled and tested in accordance with the applicable requirements of 902.02.

(a) Performance Graded Asphalt Binders

Performance graded asphalt binders shall be supplied by an approved supplier in accordance with ITM 581.

10

Performance graded, PG asphalt binders shall be in accordance with the following:

GRADE	PG 58-28	PG 64-22	PG 64-28	PG 70-22	PG 70-28	PG 76-22
ORIGINAL BINDER						
Flash Point, minimum °C	230					
Viscosity, maximum, 3 Pa·s, Test Temp, °C	135					
DSR, $G^*/\sin \delta$ (delta), minimum, 1.00 kPa, Test Temp. @ 10 rad/s, °C	58	64	64	70	70	76
ROLLING THIN FILM OVER RESIDUE						
Mass Loss, maximum, %	1.00					
DSR, $G^*/\sin \delta$ (delta), minimum, 2.20 kPa, Test Temp. @ 10 rad/s, °C	58	64	64	70	70	76

PRESSURE AGING VESSEL (PAV) RESIDUE						
PAV Aging Temperature °C (Note 1)	100	100	100	100	100	100
DSR, $G^*\sin \delta$ (delta), maximum, 5000 kPa, Test Temp. @ 10 rad/s, °C	19	25	22	28	25	31
Physical Hardening (Note 2)	Report					
Creep Stiffness, S, maximum, 300 MPa, m-value, minimum, 0.300 Test Temp. @ 60 s, °C	-18	-12	-18	-12	-18	-12
Notes 1. Oven temperature tolerance shall be $\pm 0.5^\circ\text{C}$. 2. Physical Hardening is performed on a set of asphalt beams according to AASHTO T 313, Section 12.1, except the conditioning time is extended to 24 h ± 10 min at 10°C above the minimum performance temperature. The 24 h stiffness and m-value are reported for information purposes only.						

1. Lots and Sublots

A binder lot for each grade of PG binder will be one week of HMA production. Lots will be further subdivided into sublots for each twelve hour period when HMA is produced within a calendar day. A lot will contain one to fourteen sublots.

20

2. Sampling

Each sample shall be taken from the asphalt delivery system at the HMA plant. Each sample will represent a subplot. The Department will randomly select one subplot from each lot in accordance with ITM 802 for either complete or partial testing. If the subplot selected is in compliance, the lot will be accepted. If the subplot is not in compliance, the material will be adjudicated as a failed material in accordance with 105.03.

3. PG Binder Testing

30 PG binder testing will be performed on completed PG binder lots and will consist of either complete or partial testing. Complete PG binder testing consists of RTFO-DSR and PAV-BBR testing. Complete PG binder testing will be performed on the first subplot of the first lot of production for each grade of material for each supplier, per plant, and then randomly once every ten lots. Partial PG binder testing consists of RTFO-DSR testing on a random subplot of each lot. Lots and/or sublots to be tested will be selected in accordance with Section 3.0 of ITM 802. Random lots designated for complete testing will be selected upon the delivery of the first lot. Rotational viscosity and flashpoint tests are not required for complete or partial testing.

40

If the test results from the complete or the partial testing are in accordance with the specifications, the entire lot of PG material is considered to be acceptable.

If the test results from a complete test are not in accordance with the specifications, the results will be reported to the DMTE and the Department's Asphalt Engineer. The DMTE will prepare a failed materials report in accordance with 105.03, and the next PG binder lot will be selected for complete testing.

50 If the test results from the partial test are not in accordance with the specifications, the Department's laboratory will initiate a PAV-BBR test on the same subplot. The test results will be reported to the DMTE and the Department's Asphalt Engineer. The DMTE will prepare a failed material report in accordance with 105.03, and the next PG binder lot will be selected for complete testing.

For any PG binder lot having test results not complying with the specifications, the remaining samples for that lot and all the backup samples will be held for 60 days from the date written notification is provided for possible appeal testing. After 60 days, all samples will be discarded. PG binder samples and backups for lots meeting specifications will be discarded promptly.

60

The Department's Asphalt Engineer will review the supplier's ASC program and the appropriate DMTE will review the Certified HMA Producer's QCP for compliance for all failing complete test results.

4. Appeals

If the Contractor does not agree with the acceptance test results for the lot, a request may be made in writing for additional testing. The appeal shall be submitted within 30 calendar days of receipt of the Department's written results. The basis of the appeal shall include complete AASHTO M 320 test results for the specific subplot
70 in question plus test values from all other sublots for the parameters being disputed.

If an appeal is accepted, the Department will randomly select two additional subplot samples if available from the lot in question. The additional subplot samples if available and the backup sample will be tested in an AASHTO accredited laboratory for the failing test parameters. The backup and additional test results for each test will be averaged. The average value for each test will be considered the final lot value. The Contractor will be notified in writing of the additional test results, the final lot values, and the appeal conclusions.

80 If the appeal is not accepted, the Department will respond to the Contractor stating the grounds for the denial.

(b) Asphalt Emulsions

Asphalt emulsions shall be composed of an intimate homogeneous suspension of a base asphalt, an emulsifying agent, and water. Asphalt emulsions may contain additives to improve handling and performance characteristics. Failure of an emulsion to perform satisfactorily in the field shall be cause for rejection, even though it passes laboratory tests. The grade used shall be in accordance with the table for asphalt emulsions as shown herein.

90

AE-90 is a medium breaking, low-penetration, high-asphalt content type, intended for hot and cold plant mixing, road mixing, and seal coats or as otherwise specified.

AE-90S is a rapid setting, anionic type emulsion for seal coat applications.

AE-150 is a medium breaking, moderately soft penetration type, intended for use in surface treating, tack coats, and coating open and dense graded aggregate, or as otherwise specified.

100

AE-150-L is a medium-breaking, relatively low-viscosity type. It may be specified in lieu of AE-T or AE-150 when a softer asphalt or greater aggregate penetration is desired. AE-150-L is suitable for sand seals.

AE-PL is a medium-slow-breaking, low-viscosity, low-asphalt content type, intended for use as a prime or as dust palative.

AE-T is a medium-breaking, comparatively low penetration type, intended for tack coats, seed mulching, or as otherwise specified.

110

HFRS-2 is a quick-breaking, high-viscosity, high-float, relatively high asphalt content type, intended for seal coats.

RS-2 is a quick-breaking, high-viscosity, relatively high-asphalt content type, intended for seal coats.

AE-PMP is a polymerized modified asphalt emulsion intended for use as a prime coat material.

120

AE-PMT is a polymerized modified asphalt emulsion intended for use as a tack coat material.

The requirements for asphalt emulsions shall be in accordance with the following:

(c) Cutback Asphalts

130 Cutback asphalts shall be composed of an intimate homogeneous mixture of an asphalt base and a suitable distillate designed for medium, or slow curing. Cutback asphalts may also contain an additive as an aid in uniformly coating wet, damp, or dry aggregates used in patching mixtures or HMA pavements. These asphalts shall not contain more than 0.3% water as determined by AASHTO T 55, shall not separate when allowed to stand, and shall not foam when heated to permissible temperatures. When an additive is used, it shall be incorporated homogeneously in the asphalt at the point of manufacture. The temperature of the cutback asphalt shall not be higher than shown for that grade in 902.03.

1. Medium Curing Asphalts With and Without Additives

140 Medium curing asphalts with and without additives shall be in accordance with the following:

Characteristics	Grades			
	MC-70 MCA-70	MC-250 MCA-250	MC-800 MCA-800	MC-3000 MCA-3000
Flash Point (Open Tag.), °C ⁽⁴⁾	38+	66+	66+	66+
Kinematic Viscosity at 60°C (cSt) ⁽²⁾	70-140	250-500	800-1600	3000-6000
Saybolt-Furol Viscosity at 50°C (s)	60-120	125-250	100-200	300-600
Saybolt-Furol Viscosity at 60°C (s)				
Saybolt-Furol Viscosity at 83°C (s)				
Distillation ⁽¹⁾				
Distillate (% of total distillate to 360°C				
MC-70 @ 225°C):				
to 225°C	0-20	0-10		
to 260°C	20-60	15-55	35+	15+
to 316°C	65-90	60-87	45-80	15-75

(with additive)	120-300	120-300	120-300	120-300
Ductility, 25°C (10 mm) ⁽³⁾	100+	100+	100+	100+
Solubility in organic solvents, %	99.5+	99.5+	99.5+	99.5+
(1) Test may be waived when approved. (2) Viscosity may be determined by either the Saybolt-Furol or Kinematic test. In case of dispute, the Kinematic viscosity test shall prevail. (3) If the ductility at 25°C is less than 100, the material will be acceptable if its ductility at 16°C is 100+. (4) Flash point by Cleveland Open Cup may be used for products having a flash point greater than 80°C.				

2. Slow Curing Asphalts With and Without Additives

Slow curing asphalts with and without additives shall be in accordance with the following:

Characteristics	Grades			
	SC-70 SCA-70	SC-250 SCA-250	SC-800 SCA-800	SC-3000 SCA-3000
Flash Point (Cleveland Open Cup), (°C)	66+	79+	93+	107+
Kinematic Viscosity at 60°C (cSt) ⁽²⁾	70-140	250-500	800-1600	3000-6000
Saybolt-Furol Viscosity at 50°C (s)	60-120	125-250	100-200	300-600
Saybolt-Furol Viscosity at 60°C (s)				
Saybolt-Furol Viscosity at 83°C (s)				
Distillation ⁽¹⁾ Total Distillate to 360°C (% by volume)	10-30	4-20	2-12	5
Float Test of Distillation Residue at 50°C (s)	20-100	25-110	50-140	75-200
Ductility of Asphalt Residue at 25°C (10 mm) ⁽¹⁾	100+	100+	100+	100+
Solubility in organic solvents, % ⁽¹⁾	99.5+	99.5+	99.5+	99.5+
(1) Test may be waived when approved.				
(2) Viscosity may be determined by either the Saybolt-Furol or Kinematic test. In case of dispute, the Kinematic viscosity test shall prevail.				

(d) Utility Asphalt

The asphalts shall be uniform in character and shall not foam when heated to 150 350°F (177°C). Utility asphalts shall be in accordance with the following:

Characteristics/Grades	UA-I	UA-II	UA-III
Softening Point (Ring & Ball), °C	46-63	63-85	79.5-96
Penetration of Original Samples ⁽¹⁾ (0.1 mm) at 4°C, 200 g, 60 s, Min. at 25°C, 100 g, 5 s at 46°C, 50 g, 5 s	10 50-100 100 Min.	10 25-45 130 Max.	10 15-35 90 Max.
Ductility @ 25°C, 50 mm/min, 10 mm, Min. ⁽¹⁾	30	10	2.5
Solubility in Organic Solvents, %, Min. ⁽¹⁾	99.0	99.0	99.0
Flash Point (Cleveland Cup), °C, Min. ⁽¹⁾	225	225	225
Penetration of Residue from Thin Film Oven Test, 25°C, 100 g, 5 s, (0.1 mm) Min. ⁽¹⁾	30	15	10
(1) Test will be performed when complete physical characteristics are needed or desired.			

(e) Asphalt for Coating Corrugated Metal Pipe

Asphalt for coating corrugated metal pipe shall be in accordance with the following:

Physical Properties	Minimum	Maximum
Softening Point (Ring & Ball), °C	93	110
Penetration of Original Samples (0.1 mm) at 4°C, 200 g, 60 s, Min. at 25°C, 100 g, 5 s	20 35 ⁽¹⁾	
Solubility in Organic Solvents, %	99.0	
Flash Point (Cleveland Open Cup), °C	232	
Flow Test, mm		6.4
Shock Test	3 of 4 specimens shall pass	
(1) May be 30 minimum provided all four shock test specimens pass.		

902.02 Sampling and Testing Asphalt Materials

The tests and AASHTO references are as follows:

160

- (a) Sampling Bituminous Materials AASHTO T 40

The following exceptions to AASHTO T 40 shall apply:

1. Samples may be obtained at any time before material is incorporated into the work.
2. Samples for all grades of asphalt emulsion shall be a minimum of 1/2 gal. (1.9 L). The size of samples of other liquid material may be 1 qt (1.0 L).
3. Samples of liquid materials shall be obtained at one of the following:

170

- a. bulk storage tanks from sampling valves located in the tank or line and asphalt plant storage tanks from sampling valves located in the tank
- b. transports from sampling valves
- c. distributors from valves
- d. other storage or locations as approved
- e. sampling by other recognized devices may be approved

180

- (b) Water in petroleum products, except the solvent
or carrier may be toluene AASHTO T 55

- 190 (c) Density, Specific Gravity, or API Gravity of
Crude Petroleum and Liquid Products by
Hydrometer Method AASHTO T 227
- (d) Specific Gravity of Semi-Solid Bituminous
Materials AASHTO T 228
- (e) Specific Gravity of Solid Pitch and Asphalt AASHTO T 229
- (f) Flash and Fire Points (Open Cup)
- 200 1. When the flash point is higher than 175°F
(79°C), “Flash and Fire Points by
Cleveland Open Cup” AASHTO T 48
2. When the flash point is 175°F
(79°C) or lower, “Flash Point with Tagliabue
Open Cup” AASHTO T 79
- (g) Softening Point of Bituminous Materials,
Ring and Ball AASHTO T 53
- 210 (h) Penetration of Bituminous Materials AASHTO T 49
- (i) Loss of Heating AASHTO T 47
- (j) Solubility in Organic Solvents, except the
solvent may be 1,1,1,-Trichloroethane AASHTO T 44
- (k) Inorganic Matter or Ash AASHTO T 59
- 220 (l) Saybolt-Furol Viscosity AASHTO T 72
- (m) Ductility of Binder Material, except that the conditioning period of the
specimens may be shortened, and that only one normal test will be
required. Shortened conditioning period: The specimen shall be allowed
to cool in air for at least 30 min. It shall then be trimmed and placed in
the water bath for a period of 60 to 90 min before testing. In case of
failure or dispute, three normal tests will be required and specimens
shall be conditioned as in AASHTO T 51.
- 230 (n) Distillation of Cutback Asphaltic Products, except the
length of condenser tube may be 400 mm ± 24 mm AASHTO T 78
- (o) Float Test for Bituminous Materials AASHTO T 50

- (p) Kinematic Viscosity of Asphalts AASHTO T 201
- (q) Absolute Viscosity of Asphalts AASHTO T 202
- 240 (r) Effect of Heat and Air on Asphalt Materials,
Thin-Film Oven Test AASHTO T 179
- (s) Effect of Heat and Air on a Moving Film of
Asphalt, Rolling Thin Film Oven Test AASHTO T 240
- (t) Testing Asphalt Emulsions AASHTO T 59
The following exceptions to T 59 shall apply:
1. For the Residue by Distillation test, the specified aluminum alloy
250 still shall be the referee still.
 2. When tests on the residue are not required, the percent of residue
for emulsion grades RS-2, AE-60, AE-90, and AE-T only, may be
determined by the Residue by Evaporation test of AASHTO T 59.
The percent of residue shall be determined by the Residue of
Distillation test in all cases of failure or dispute.
 3. The stone coating test shall be performed as follows on a mixture
of 465 ± 1 g of reference stone and 35.0 ± 0.1 g of asphalt
emulsion:
260
 - a. For AE-90 the mixture of stone and asphalt shall be mixed
vigorously for 5 min. At the end of the mixing period, the mix
shall be rinsed by running sufficient tap water at the side of the
container to completely immerse the mix. The tap water shall
then be poured off and the rinsing step repeated as necessary
until the rinse water pours off essentially clear. The stone shall
remain a minimum of 90% coated.
 - 270 b. For AE-150 and AE-150-L, the mixture of stone and asphalt
shall be mixed vigorously for 5 min and then allowed to stand
for 3 h. At the end of this time, the mixture shall again be
mixed vigorously for 5 min. At the end of the mixing period,
the mix shall be rinsed by running sufficient tap water at the
side of the container to completely immerse the mix. The tap
water shall then be poured off and the rinsing step repeated as
necessary until the rinse water pours off essentially clear. The
stone shall remain a minimum of 90% coated for AE-150 and
AE-150-L.

- 280 4. For the Demulsibility test, normally only one test will be required. In case of failure or dispute, the specified procedure in AASHTO T 59 will be followed.
5. For oil portion from Residue by Distillation, report the number of milliliters of oil per 100 g of emulsion.
- 290 (u) For coating test for cutback asphalts with additive, 20 g of 20 to 30 mesh Ottawa sand shall be placed in a clean 2 oz (60 mL) wide-mouthed jar and covered with 25 g of distilled water at room temperature. One gram of the liquid asphalt to be tested shall be placed gently upon the surface of the water so that it floats and does not contact the sand. The lid shall then be placed on the jar and tightened securely. If the liquid asphalt to be tested is grade 70 or 250, the jar and contents shall be shaken vigorously for 30 s. If the grade is 800 or 3000, the jar and contents shall be immersed in a 115°F (46°C) water bath for 5 min to bring the contents of the jar to a temperature of approximately 100°F (38°C). The jar shall then be shaken vigorously for 30 s. After shaking, the asphalt coating on the sand shall be observed under a constant, strong light. Complete coating of the sand is required.
- 300 (v) Stripping tests for HMA mixtures using binder materials, with or without additives, shall be performed as follows:

1. Test 1. A sample of produced mixture, 500 g, minimum, shall be obtained for testing. The size of test specimen and the amount of distilled water shall be:

310	Approximate Size of Aggregate	Minimum Weight of Test Specimen	Amount of Distilled Water
	Sand	100 g	400 mL
	12	100 g	400 mL
	11	150 g	600 mL
	9	200 g	600 mL

320 Place the specimen in the boiling distilled water and stir with a glass rod at the rate of one revolution per second for 3 min. The aggregate shall retain a minimum of 90% of its asphalt film compared with the remainder of the sample, upon completion of this procedure.

2. Test 2. Approximately 500 g of produced mixture shall be heated to 250°F (121°C) in a laboratory oven for 2 h; stirred and cooled to 200°F (92.5°C). Then a portion of the mix shall be placed in boiling distilled

water, quantity of mix and quantity of boiling water shall be as specified in Test 1, and stirred with a glass rod at the rate of one revolution per second for 3 min. The aggregate shall retain a minimum of 90% of its asphalt film compared with the remainder of the sample, upon completion of this procedure.

Note: The purpose of these tests is to determine the relative compatibility of the aggregate and asphalt, and to detect tendency of Asphalt Emulsions to re-emulsify. Test 2 may be performed as a method of determining whether compatibility can be achieved, Test 1 having given unsatisfactory results.

(w) Penetrating Ability of AE-PL.

1. Apparatus and Equipment:

a. Sand mixture:

(1) Dry Ottawa Sand (AASHTO T 106) 90 parts

(2) Dry Reference Limestone Dust, portion passing #50 (300 mm) sieve only. Reference Limestone Dust used by the Department is Limestone Calcium Carbonate manufactured by France Stone Co. The Department will furnish approximately 5 lb (2.3 kg) of Reference Limestone Dust upon request. 10 parts

(3) Water 3 parts

b. Container, 6 oz (170 g) ointment tin

c. Ruler or other measuring device

d. Timing device readable in seconds

e. Compacting Device. Rimac Spring Tester or other device suitable for compacting sand by applying a 20 psi (140 kPa) load. The compacting device shall include an adapter consisting of two metal discs slightly smaller in diameter than a 6 oz (170 g) ointment tin separated by a spacer 1 to 2 in. (25 to 50 mm). The 2.5 in. (65 mm) diameter discs used in determining weight of coating in AASHTO T 65 or ASTM A 90 are satisfactory.

f. Small, square ended spatula or putty knife

2. Procedure:

380 Thoroughly mix Standard Ottawa Sand, Reference Limestone Dust, and water. Weigh 190 ± 1 g of sand mixture into a 6 oz (170 g) ointment tin. Level surface of sand with a spatula. Place the compacting adapter on the sand surface and slowly, over a period of about 5 s, compact the sand until the 20 psi (140 kPa) load is achieved, which is approximately 100 lb (45 kg) on the Rimac Spring Tester. Remove the compacting device, avoiding disturbance to the sand surface. Quickly pour 12 g of the emulsion from a height of about 4 in. (100 mm) onto top of sand mixture. Start timer at start of pour. Stop timer when all emulsion penetrates into sand mixture. Delay 2 min then remove sand and mixture from one side of ointment tin, about 1/2 of mixture. Measure to determine average depth of penetration into sand mixture. Penetration time shall be 100 s or less; penetration depth shall be 1/4 in. (6 mm) or more.

Note (1): In accordance with manufacturer's recommendations.		

SECTION 903 – CLASSIFICATION OF SOILS

903.01 Definitions

All of the soils shall be tested and classified in accordance with AASHTO M 145, and in accordance with the grain-size classification procedure as follows:

Soil Classification	Definition
Boulders	Retained on 3 in. (75 mm) sieve
Gravel	3 in. (75 mm) to No. 10 (2.0 mm) sieve
Coarse Sand	No. 10 (2.0 mm) to No. 40 (425 µm) sieve
Fine Sand	No. 40 (425 µm) to No. 200 (75 µm) sieve
Silt	0.075 to 0.002 mm
Clay	Smaller than 0.002 mm
Colloids	Smaller than 0.001 mm

903.02 Soils Having 0% to 19% Retained on No. 10 (2.00 mm) Sieve

These soils shall be classified as follows:

10

Classification	Percent Sand and Gravel	Percent Silt	Percent Clay
Sand	80 – 100	0 – 20	0 – 20
Sandy Loam	50 – 80	0 – 50	0 – 20
Loam	30 – 50	30 – 50	0 – 20
Silty Loam	0 – 50	50 – 80	0 – 20
Silt	0 – 20	80 – 100	0 – 20
Sandy Clay Loam	50 – 80	0 – 30	20 – 30
Clay Loam	20 – 50	20 – 50	20 – 30
Silty Clay Loam	0 – 30	50 – 80	20 – 30
Sandy Clay	50 – 70	0 – 20	30 – 50
Silty Clay	0 – 20	50 – 70	30 – 50
Clay	0 – 50	0 – 50	30 – 100

903.03 Soils Having 20% or More Retained on No 10 (2.00 mm) Sieve and More Than 20% Passing No. 200 (75 µm) Sieve

These soils shall be classified in accordance with 903.02, followed by a term describing the relative amount of gravel as follows:

20% to 35%:	“with some gravel”
36% to 50%:	“and gravel”

20 **903.04 Soils Having 20% or More Retained on No. 10 (2.00 mm) Sieve and Less Than 20% Passing No. 200 (75 µm) Sieve**

These soils shall be classified as follows:

Classification	Percent Gravel	Percent Sand	Percent Silt	Percent Clay
Gravel	85 – 100	0 – 15	0 – 15	0 – 15
Sandy Gravel	40 – 85	15 – 40	0 – 20	0 – 20
Gravelly Sand	20 – 40	40 – 80	0 – 20	0 – 20
Sand & Gravel	20 – 50	20 – 50	0 – 20	0 – 20

If the gradation of a given sample is not in exact accordance with the requirements for a given classification, it shall be placed in the classification to which it comes the closest.

903.05 Organic Soils

- 30 The following classification system shall be used for organic soils in accordance with AASHTO T 267.

Classification	Percentage
With Trace Organic Matter	1 to 6
With Little Organic Matter	7 to 12
With Some Organic Matter	13 to 18
Organic Soil (A-8)	19 – 30
Peat (A-8)	More than 30

903.06 Marly Soils

The following classification system shall be used for marly soils with calcium and magnesium carbonate content.

Classification	Percentage
With Trace Marl	1 to 9
With Little Marl	10 to 17
With Some Marl	18 to 25
Marly Soil (A-8)	26 to 40
Marl (A-8)	More than 40

SECTION 904 – AGGREGATES

904.01 Aggregates

Aggregates shall consist of natural or manufactured materials produced from but not limited to limestone, dolomite, gravels, sandstones, steel furnace slag (SF), air-cooled blast furnace slag (ACBF), granulated blast furnace (GBF), wet bottom boiler slag, or other geologic rock types approved by the Engineer.

- 10 A source will not be considered for acceptance of material until a preliminary investigation has been made. As part of this investigation, samples will be obtained and tests conducted to determine the quality and classification of the aggregates in accordance with ITM 203.

Two types of samples are required for the preliminary investigation: ledge samples for crushed stone sources and production samples for crushed stone, natural sand and gravel, and slag sources.

- 20 Ledge samples will be obtained from bedrock units as they naturally occur in the proposed working face of the quarry. Ledges will be identified by their differences in color, texture, geological formation, etc.

Production samples will be obtained from stockpiles of finished materials.

Aggregates, except those used for precast concrete units or fine aggregates used for snow and ice abrasive, shall be supplied by a Certified Aggregate Producer in accordance with 917. Structure backfill may be obtained from a non-CAPP source in accordance with 211.02. SF for SMA mixtures shall also require the following.

- 30 (a) Specific gravity quality control tests shall be completed at a frequency of one test per 2000 t (2000 Mg) produced.
- (b) Target bulk specific gravity shall be established using the average of the first four tests.
- (c) Subsequent individual tests shall be within 0.050 of the target bulk specific gravity.
- 40 (d) Moving average of four consecutive tests shall be within 0.040 of the target bulk specific gravity.
- (e) Tests outside these ranges shall require the material to be isolated from the approved stockpile until action has been taken to eliminate the cause of the non-conformity. Any non-conforming test shall be followed immediately by a corrective action. Corrective actions shall include, but are not limited to, investigation for assignable cause, correction of known assignable cause, and retesting.

- (f) If it is determined that a new target is necessary, a request shall be made in writing to the District Materials and Tests Engineer to establish the new target.

Dolomite aggregates are defined as carbonate rock containing at least 10.3% elemental magnesium when tested in accordance with ITM 205.

Polish resistant aggregates are defined as those aggregates in accordance with ITM 214. Aggregates meeting these requirements will be maintained on the Department's list of approved Polish Resistant Aggregates.

- Sandstone aggregates shall only be used in HMA surface or SMA surface mixtures. Sandstone aggregates are defined as a sedimentary rock composed of siliceous sandgrains containing quartz, chert, and quartzose rock fragments in a carbonate matrix or cemented with silica, calcite, or dolomite. The Materials and Tests Division will determine identification of sandstone.

Steel furnace (SF) slag shall only be used in aggregate shoulders, HMA surface or SMA surface mixtures, dumped riprap, and snow and ice abrasives.

- Adjustments in weight (mass) shall be made to compensate for the difference in specific gravity of slag compared to natural aggregate when payment is on a weight (mass) basis. The following typical values for specific gravity will be used: natural aggregate both fine and coarse, 2.6; ACBF slag coarse aggregate, 2.3; ACBF slag fine aggregate, 2.6; GBF slag fine aggregate, 2.1; and SF slag both fine and coarse, 3.4. The contract quantity shall not be adjusted on any pay item less than 500 t (500 Mg).

- When slag is furnished as an aggregate, the approximate quantity of tons (megagrams) to be supplied will be determined by multiplying the pay item quantity of tons (megagrams) by the specific gravity of slag divided by 2.6. The adjusted contract quantities will be determined by multiplying the accepted quantity of tons (megagrams) by 2.6 divided by the specific gravity of the slag.

At time of use, aggregates shall be free from lumps or crusts of hardened or frozen materials.

- Composite stockpiling of natural sand fine aggregate from multiple sources into one stockpile will be allowed provided the fine aggregates are within a range of 0.10 for the bulk specific gravity (dry) and a range of 1.0% for the absorption. The range of bulk specific gravity (dry) and absorption values shall be the difference between the highest and lowest value, respectively, of the fine aggregate sources within the stockpile. A written request for the composite stockpiling shall be made to the Materials and Tests Division.

904.02 Fine Aggregates

Fine aggregates are defined as 100% passing the 3/8 in. (9.5 mm) sieve and a minimum of 80% passing the No. 4 (4.75 mm) sieve. Characteristics of fine aggregates are as follows:

Characteristic	PCC	HMA	SMA
Physical			
Organic Impurities, AASHTO T 21 lighter than or equal to, Color Standard (Note 1).....	3		
Acid Insoluble, ITM 202 (Note 2)		40	
Soundness			
Freeze and Thaw, AASHTO T 103, Method A, % Max. (Note 3)	10.0%	10.0%	10.0%
Brine Freeze and Thaw, ITM 209, % Max. (Note 3)	12.0%	12.0%	12.0%
Sodium Sulfate Soundness, AASHTO T 104, % Max. (Note 3)	10.0%	10.0%	10.0%
Notes: 1. When subjected to the colormetric test for organic impurities and a color darker than the standard is produced, it shall be tested for effect of organic impurities on strength of mortar in accordance with AASHTO T 71. If the relative strength at seven days is less than 95% it shall be rejected. 2. For ABCF or GBF slag sands, the minimum acid insoluble content shall be 25%. Acid insoluble requirements shall not apply to crushed limestone or dolomite sands. 3. AASHTO T 104 and ITM 209 may be run at the option of the Engineer, in-lieu of AASHTO T 103.			

(a) For Portland Cement Concrete

100 Fine aggregate for use in PCCP or bridge decks shall be natural sand. Fine aggregate for other PCC shall be natural sand or crushed limestone, dolomite, gravel, or ACBF.

Natural sand which has been used as foundry sand when tested in accordance with ITM 215, and complying with IDEM Class III or Class IV in accordance with 329 IAC 10-7-4 may be used in precast concrete units or precast concrete pipe. When foundry sand is used, the precast concrete manufacturer shall maintain a copy of the Waste Classification issued by IDEM and an indemnification statement shall accompany the precast items to each contract.

110

(b) For HMA Mixtures

Fine aggregates for use in HMA shall be natural sand or crushed limestone, dolomite, gravel, sandstone, SF, or ACBF. SF sand may be used only in HMA surface mixtures. The amount of crushed limestone sand shall not exceed 20% of the total aggregate used in HMA surface mixtures with ESAL equal to or greater than 3,000,000, except limestone sands manufactured from aggregates on the Department's list of approved Polish Resistant Aggregates will not be limited. If

904.02

soundness testing cannot be conducted, the aggregate shall come from a Category I source in accordance with ITM 203.

120

The fine aggregate angularity value of the total blended aggregate material from the fine and coarse aggregates, and recycled materials shall meet or exceed the minimum values for the appropriate ESAL category and position within the pavement structure as follows:

FINE AGGREGATE ANGULARITY		
TRAFFIC ESAL	DEPTH FROM SURFACE	
	≤ 100 mm	> 100 mm
< 300,000		
300,000 to < 3,000,000	40	40
3,000,000 to < 10,000,000	45	40
10,000,000 to < 30,000,000	45	40
≥ 30,000,000	45	45

Fine Aggregate Angularity, Method A AASHTO T 304

130 The clay content of the blended aggregate material from the fine and coarse aggregates shall meet or exceed the minimum values for the appropriate ESAL category as follows:

CLAY CONTENT	
TRAFFIC ESAL	SAND EQUIVALENT, MINIMUM
< 300,000	40
300,000 to < 3,000,000	40
3,000,000 to < 10,000,000	45
10,000,000 to < 30,000,000	45
≥ 30,000,000	50

Clay Content, Sand Equivalency AASHTO T 176

(c) For SMA Mixtures

140 Fine aggregate for SMA shall be limestone, dolomite, crushed gravel, SF, or ACBF. Crushed gravels shall have a minimum fine aggregate angularity of 45 in accordance with AASHTO T 304 Method A. Fine aggregates shall be non-plastic in accordance with AASHTO T 90.

(d) For Pneumatically Placed Mortar

Fine aggregate shall be natural sand suitable for use with a pneumatic cement gun. Fine aggregate shall be size No. 15, or size PP in accordance with 904.02(h), or an approved gradation from a CAPP source.

(e) Mortar Sand

150 Fine aggregate for mortar shall consist of uniformly graded natural sand in accordance with gradation requirements of 904.02(h) for size No. 15 or an approved gradation from a CAPP source.

(f) Mineral Filler for SMA

160 Mineral filler shall consist of dust produced by crushing stone, portland cement, or other inert mineral matter having similar characteristics. Mineral filler shall be in accordance with the gradation requirements of 904.02(h) for size No. 16. Mineral filler shall be in accordance with ITM 203 or from an ABF slag source. The sieve analysis of mineral filler shall be conducted in accordance with AASHTO T 37 except as noted in 904.06. Mineral filler shall be non-plastic in accordance with AASHTO T 90.

(g) Snow and Ice Abrasives

Snow and ice abrasives shall be fine aggregates or cinders in accordance with the gradation requirements of 904.02(h) for size S&I.

When steel slag is used for snow and ice abrasives, and payment is on a tonnage basis, the pay quantity shall be adjusted in accordance with 904.01.

(h) Sizes of Fine Aggregates

SIZES (PERCENT PASSING)						
Sieve Sizes	23	24	15	16	PP	S&I
3/8 in. (9.5 mm)	100	100				100
No. 4 (4.75 mm)	95-100	95-100			100	
No. 6 (3.35 mm)			100			
No. 8 (2.36 mm)	80-100	70-100	90-100		85-95	
No. 16 (1.18 mm)	50-85	40-80				
No. 30 (600 µm)	25-60	20-60	50-75	100	50-65	
No. 50 (300 µm)	5-30	7-40	15-40		15-25	0-30
No. 80 (180 µm)				95-100		
No. 100 (150 µm)	0-10	1-20	0-10		0-10	
No. 200 (75 µm)	0-3	0-6	0-3	65-100		0-7

(i) Sampling and Testing

170 Sampling and testing shall be conducted in accordance with the following AASHTO and ITMs.

Acid Insoluble Content..... ITM 202

*Amount of Material Finer than

904.03 Coarse Aggregates

Course aggregates are defined as having a minimum of 20% retained on the No. 4 (4.75 mm) sieve. Coarse aggregates shall not contain adherent fines that are detrimental to the end product as defined in ITM 211.

The coarse aggregate shall comply with the quality requirements and the additional requirements in accordance with 904.03(a). However, coarse aggregate may be rejected based on previous performance service records. Class AP is defined as the highest classification and Class F the lowest. Blending of material for compliance with gradation or crushed particle requirements may be permitted when requested in writing. Blending of aggregate products to improve the quality classification of the finished product will not be permitted.

(a) Classification of Aggregates

Characteristic Classes	AP	AS	A	B	C	D	E	F
Quality Requirements								
Freeze and Thaw Beam Expansion, % Max. (Note 1).....	.060							
Los Angeles Abrasion, % Max. (Note 2).....	40.0	30.0	40.0	40.0	45.0	45.0	50.0	
Sodium Sulfate Soundness, % Max. (Note 3)	12.0	12.0	12.0	12.0	16.0	16.0	20.0	25.0
Brine Freeze and Thaw Soundness, % Max. (Note 4).....	30	30	30	30	40	40	50	60
Absorption, % Max. (Note 5).....	5.0	5.0	5.0	5.0	5.0			
Additional Requirements								
Deleterious, % Max.								
Clay Lumps and Friable Particles	1.0	1.0	1.0	1.0	2.0	4.0		
Non-Durable (Note 6)	4.0	4.0	4.0	4.0	6.0	8.0		
Coke					(See Note 7)	(See Note 7)		
Iron.....								
Chert (Note 8)	3.0	3.0	3.0	5.0	8.0	10.0		
Weight per Cubic Foot for Slag, (lbs), Min.	75.0		75.0	75.0	70.0	70.0	70.0	
(Mass per Cubic Meter for Slag, (kg)).....	(1200)	(1200)	(1200)	(1200)	(1120)	(1120)	(1120)	
Crushed Particles, % Min. (Note 9)								
Asphalt Seal Coats			70.0	70.0				
Compacted Aggregates			20.0	20.0	20.0	20.0		
Notes: 1. Freeze and thaw beam expansion shall be tested and re-tested in accordance with ITM 210.								
2. Los Angeles abrasion requirements shall not apply to BF.								
3. Aggregates may, at the option of the Engineer, be subjected to 50 cycles of freezing and thawing in accordance with AASHTO T 103, Procedure A, and may be accepted, provided they do not have a loss greater than specified for Sodium Sulfate Soundness.								

4. Brine freeze and thaw soundness requirements are subject to the conditions stated in Note 3.
5. Absorption requirements apply only to aggregates used in PCC and HMA mixtures except they shall not apply to BF. When crushed stone coarse aggregates from Category I sources consist of production from ledges whose absorptions differ by more than two percentage points, the absorption test will be performed every three months on each size of material proposed for use in PCC or HMA mixtures. Materials having absorption values between 5.0 and 6.0 that pass AP testing may be used in PCC. If variations in absorption preclude satisfactory production of PCC or HMA mixtures, independent stockpiles of materials will be sampled, tested, and approved prior to use.
6. Non-durable particles include soft particles as determined by ITM 206 and other particles which are structurally weak, such as soft sandstone, shale, limonite concretions, coal, weathered schist, cemented gravel, ocher, shells, wood, or other objectionable material. Determination of non-durable particles shall be made from the total weight (mass) of material retained on the 3/8 in. (9.5 mm) sieve.
- Scratch Hardness Test shall not apply to crushed stone coarse aggregate.
7. ACBF and SF coarse aggregate shall be free of objectionable amounts of coke, iron, and lime agglomerates.
8. The bulk specific gravity of chert shall be based on the saturated surface dry condition. The amount of chert less than 2.45 bulk specific gravity shall be determined on the total weight (mass) of material retained on the 3/8 in. (9.5 mm) sieve for sizes 2 through 8, 43, 53, and 73 and on the total weight (mass) of material retained on the No. 4 (4.75 mm) sieve for sizes 9, 11, 12, and 91.
9. Crushed particle requirements apply to gravel coarse aggregates used in compacted aggregates, and seal coats except seal coats used on shoulders. Determination of crushed particles shall be made from the weight (mass) of material retained on the No. 4 (4.75 mm) sieve in accordance with ASTM D 5821.

(b) Coarse Aggregate Angularity for HMA and SMA

210 The coarse aggregate angularity (CAA) of the total blended aggregate, including recycled materials, shall meet or exceed the minimum values for the appropriate ESAL category and position within the pavement structure as follows.

COARSE AGGREGATE ANGULARITY		
TRAFFIC, ESAL	DEPTH FROM SURFACE	
	≤ 4 in. (100 mm)	> 4 in. (100 mm)
< 300,000	55	
300,000 to < 3,000,000	75	50
3,000,000 to < 10,000,000	85/80*	60
10,000,000 to < 30,000,000	95/90*	80/75*
≥ 30,000,000	100/100*	100/100*
* Denotes two faced crush requirements.		

For SMA mixtures, the total blended aggregate shall be 100% one face and 95% two face crushed.

Coarse Aggregate Angularity ASTM D 5821

220 Coarse aggregate angularity requirements do not apply to 4.75 mm HMA mixture designation.

(c) Flat and Elongated

The coarse aggregate shall contain 10% or less flat and elongated particles. A flat and elongated piece is defined as a particle having a ratio of length to thickness greater than five. Determination of flat and elongated particles shall be made from the weight (mass) of material retained on the 3/8 in. (9.5 mm) sieve and each sieve size greater than the 3/8 in. (9.5 mm) sieve.

230 Flat and Elongated ASTM D 4791

Flat and elongated requirements do not apply to 4.75 mm HMA mixture designation.

(d) Surface Aggregate Requirements

The surface mixture aggregates selection shall be based on the ESAL category as follows.

1. HMA Coarse Aggregate

Coarse Aggregate Type	Traffic ESALs		
	< 3,000,000	< 10,000,000	≥ 10,000,000
Air-Cooled Blast Furnace Slag	Yes	Yes	Yes
Steel Furnace Slag	Yes	Yes	Yes
Sandstone	Yes	Yes	Yes
Crushed Dolomite	Yes	Yes	Note 1
Polish Resistant Aggregates	Yes	Yes	Note 1
Crushed Stone	Yes	No	No
Gravel	Yes	No	No
Note 1. Polish resistant aggregates or crushed dolomite may be used when blended with ACBF or sandstone but cannot exceed 50% of the coarse aggregate by weight (mass), or cannot exceed 40% of the coarse aggregate by weight (mass) when blended with steel furnace slag.			

240

2. SMA Coarse Aggregate

Coarse Aggregate Type	Traffic ESALs		
	< 3,000,000	< 10,000,000	≥ 10,000,000
Air-Cooled Blast Furnace Slag	No	No	No
Steel Furnace Slag	Yes	Yes	Yes
Sandstone	Yes	Yes	Yes
Crushed Dolomite	No	No	No
Polish Resistant Aggregates	No	No	No
Crushed Stone	No	No	No
Gravel	No	No	No

(e) Sizes of Coarse Aggregates

Sieve Sizes	COARSE AGGREGATE SIZES (PERCENT PASSING)											DENSE GRADED	
	COARSE GRADED											53 ⁽¹⁾	73 ⁽¹⁾
	2	5	8	9	11	12	43(1)	91					
4 in. (100 mm)													
3 1/2 in. (90 mm)													
2 1/2 in. (63 mm)	100												
2 in. (50 mm)	80-100												
1 1/2 in. (37.5 mm)		100						100			100		
1 in. (25 mm)	0-25	85-98	100					70-90	100		80-100	100	
3/4 in. (19 mm)	0-10	60-85	75-95	100				50-70			70-90	90-100	
1/2 in. (12.5 mm)	0-7	30-60	40-70	60-85	100	100	100	35-50			55-80	60-90	
3/8 in. (9.5 mm)		15-45	20-50	30-60	75-95	95-100							
No. 4 (4.75 mm)		0-15	0-15	0-15	10-30	50-80	20-40				35-60	35-60	
No. 8 (2.36 mm)		0-10	0-10	0-10	0-10	0-35	15-35				25-50		
No. 30 (600 µm)						0-4	5-20				12-30	12-30	
No. 200 (75 µm) ⁽²⁾							0-6.0				5.0-10.0 ⁽⁴⁾	5.0-12.0	
Decant (PCC) ⁽³⁾		0-1.5	0-1.5	0-1.5	0-1.5	0-1.5		0-1.5		0-1.5			
Decant (Non-PCC)	0-2.5	0-2.5	0-3.0	0-2.5	0-2.5	0-2.0			0-2.5				
Notes: 1. The liquid limit shall not exceed 25 (35 if slag) and the plasticity index shall not exceed 5. The liquid limit shall be determined in accordance with AASHTO T 89 and the plasticity index in accordance with AASHTO T 90.													
2. Includes the total amount passing the No. 200 (75 µm) sieve as determined by AASHTO T 11 and T 27.													
3. Decant may be 0-2.5 for stone and slag.													
4. When slag is used for separation layers as defined in 302.01, the total amount passing the No. 200 (75 µm) sieve shall be 10.0 to 12.0.													

(f) Sampling and Testing

Sampling and testing will be in accordance with the following AASHTO, ASTM, and ITMs.

250

Abrasion	AASHTO T 96
*Amount of Material finer than No. 200 (75 µm) Sieve	AASHTO T 11
Brine Freeze and Thaw Soundness.....	ITM 209

*Except as noted in 904.06

270

904.04 Riprap

Riprap shall consist of SF for dumped riprap only, sound stone, stone masonry, or other approved material, free from structural defects and of approved quality. Stone containing shale, unsound sandstone, or other material that will disintegrate readily, shall not be used.

(a) Dumped Riprap

280 Dumped riprap shall be broken concrete, masonry, or stone removed from an old structure; broken pieces removed from concrete pavement, base, or monolithic brick pavement; or broken rock from class X, class Y, unclassified excavation, or solid rock excavation. Material provided from sources outside the right-of-way shall be coarse aggregate, Class F or higher.

(b) Grouted Riprap

Grouted riprap material shall be in accordance with dumped riprap or revetment riprap.

(c) Revetment, Class 1, and Class 2 Riprap

290 The material shall be coarse aggregate, Class F or higher. Gradation shall be in accordance with 904.04(f).

(d) Uniform Riprap

The material shall be coarse aggregate, Class F or higher in accordance with 904.03(a). Gradation shall be in accordance with 904.04(f). Either type A or type B may be utilized.

(e) Precast Concrete Riprap

- 300 The precast concrete riprap shall consist of unreinforced concrete units of the thickness specified and shall be in accordance with the details shown on the plans. The precast concrete units shall be in accordance with ASTM C 139 except the fine aggregates shall be in accordance with 904.02(a) and the coarse aggregates, class A or higher, shall be in accordance with 904.03. The minimum compressive strength shall be 2500 psi (17 MPa) for an average of three units and 2300 psi (16 MPa) for individual units. The maximum water absorption shall be 12 lb/cu ft (190 kg/m³) for an average of three units.

(f) Sizes of Riprap

GRADATION REQUIREMENTS					
Percent Smaller					
Size, in. (mm)	Revetment	Class 1	Class 2	Uniform A	Uniform B
30 (750)			100		
24 (600)		100	85-100		
18 (450)	100	85-100	60-80		
12 (300)	90-100	35-50	20-40		
8 (200)				100	
6 (150)	20-40	10-30	0-20	35-80	95-100
3 (75)	0-10	0-10	0-10		35-80
1 (25)				0-20	0-20
Depth of Riprap, minimum	18 in. (450 mm)	24 in. (600 mm)	30 in. (750 mm)		

- 310 The maximum dimension of individual pieces shall not be greater than three times the minimum dimension. The riprap will be visually inspected for size, shape, and consistency.

904.05 Structure Backfill

- 320 The material shall be of acceptable quality, free from large or frozen lumps, wood, or other extraneous matter. It shall consist of suitable sand, gravel, crushed stone, ACBF, or GBF. Structure backfill shall be in accordance with one of the following gradations or No. 8, No. 9, No. 11, No. 53, or No. 73 coarse aggregate in accordance with the gradation requirements of 904.03(e). Coarse aggregate No. 8, No. 9, No. 11, No. 53, or No. 73 shall be crushed stone or ACBF, class D or higher.

Sieve Sizes	NOMINAL SIZES AND PERCENTS PASSING					
	2 in. (50 mm)	1 1/2 in. (37.5 mm)	1 in. (25.0 mm)	1/2 in. (12.5 mm)	No. 4 (4.75 mm)	No. 30 (600 µm)
2 1/2 in. (63 mm)	100

No 200 (75 µm)	0-8	0-8	0-8	0-8	0-8	0-8

904.06 Exceptions to AASHTO Standard Methods

(a) Exceptions to AASHTO T 2

Stockpile sampling shall be in accordance with ITM 207, unless otherwise permitted.

(b) Exceptions to AASHTO T 11, T 27, and T 37

330

1. When tests are performed in the field where ovens are not available, test samples may be dried in suitable containers over open flame or electric hot plates with sufficient stirring to prevent overheating, then cooled to constant weight (mass).
2. The balance shall be a Class G2 general purpose balance in accordance with AASHTO M 231.

(c) Exceptions to AASHTO T 27 for Coarse Aggregates

340

The size of test samples for coarse aggregate shall be as follows:

Aggregate Size

Minimum Weight (Mass) of Test Sample

- No. 2 25 lb (11.3 kg)
 No 5, 8, 43, 53, 73, and 91 13-18 lb (6-8 kg)
 No. 9 9-13 lb (4-6 kg)
 *Structure Backfill 9-13 lb (4-6 kg)
 *Subbase 9-13 lb (4-6 kg)
 * The minimum weight (mass) of the test sample for No. 4 (4.75 mm) and No. 30 (600 µm) structure backfill shall be 10 oz (300 grams).

350

(d) Exceptions to AASHTO T 85

The in-water weight (mass) shall be determined following the 15 h soaking period prior to determining the SSD weight (mass).

(e) Exceptions to AASHTO T 103 and 104

- 360 1. Counting the number of individual particles coarser than the 3/4 in. (19.0 mm) sieve will not be required.
2. For testing ledge rock, the ledge samples shall be crushed to obtain test samples for the designated increments passing the 1 1/2 in. (37.5 mm) sieve and retained on the No. 4 (4.75 mm) sieve. The factors used to calculate the weighted average loss are 30%, 40%, and 30% of the 1 1/2 in. (37.5 mm) - 3/4 in. (19 mm), 3/4 in. (19.0 mm) - 3/8 in. (9.5 mm), and 3/8 in. (9.5 mm) - No. 4 (4.75 mm) increments, respectively.
- 370 3. In the case of ledge rock, modify sections 3.3 and 6.2 of AASHTO T 103 and AASHTO T 104 respectively. When the sample received is deficient in material of a component size of any test portion, that material will be supplemented with the available component size to provide the test portion.
4. Modify section 8 of AASHTO T 103 and section 10 of AASHTO T 104. For materials designated as a coarse aggregate, the weighted loss will be calculated considering the material retained on the No. 4 (4.75 mm) sieve as 100% of the sample, and only the total weighted loss reported. In AASHTO T 104 sections 10.1.3.2 and 10.1.3.3 shall not apply, and unless otherwise noted only new
- 380 solution will be used.

SECTION 905 – MASONRY UNITS**905.01 Clay or Shale Brick**

Brick shall be in accordance with the following specifications.

(a) Sewer Brick

Sewer brick shall be in accordance with AASHTO M 91, Grade SS.

(b) Manhole Brick

- 10 Manhole brick shall be in accordance with AASHTO M 91, Grade MS.

(c) Building Brick

Building brick shall be in accordance with AASHTO M 114, Grade SW.

905.02 Concrete Brick

Concrete brick intended for use in construction of manholes, catch basins, and similar structures, or as building bricks, shall be in accordance with ASTM C 55, Grade S.

20 **905.03 Concrete Masonry Blocks**

Concrete masonry blocks may be rectangular or segmented and, when specified, shall have ends shaped to provide interlock at vertical joints. Solid masonry units shall be in accordance with ASTM C 139. Hollow load-bearing masonry units shall be in accordance with ASTM C 90, Grade N-II.

905.04 Precast Concrete Curbing

Precast concrete curbing shall consist of precast portland cement concrete curb units constructed to the length, shapes, and other details shown on the plans. These units shall be reinforced with steel reinforcement when shown on the plans. Steel
30 reinforcement shall be in accordance with 910.01.

When required for driveways, crossings, closures, or for other reasons a depressed or modified section of curb is indicated, curbing with the required modification shall be furnished.

905.05 Detectable Warning Elements

Detectable warning bricks used in sidewalk curb ramps shall be in accordance with ASTM C 902, Class SX, type II. The color shall approximate 30109 or 30166 in accordance with Federal Standard No. 595a. The color shall be consistent throughout
40 the brick. The truncated domes shall be as shown on the plans. The minimum dimensions of the brick shall be 2 1/4 in. (60 mm) thick by 3 5/8 in. (90 mm) wide by 7 5/8 in. (195 mm) long. The minimum thickness shall not be measured within the area of the domes. Detectable warning elements shall be selected from the Department's list of approved Detectable Warning Elements.

905.06 Precast Concrete Units Not Otherwise Covered

These units shall be cast in substantial permanent steel forms. Structural concrete shall attain a minimum 28 day compressive strength of 3,000 psi (20.7 MPa) as determined in accordance with AASHTO T 22. When air entrained concrete
50 is specified, it shall have an air content of from 5% to 8% by volume. The precast units shall be cured in accordance with AASHTO M 170. Water absorption of individual cores taken from such units shall not exceed 9%. Additional reinforcement shall be provided as needed to handle the precast units.

SECTION 906 – JOINT MATERIALS

906.01 Joint Fillers

Joint fillers shall be preformed materials intended to be used in PCCP and bridge joints or as otherwise specified. Joint fillers shall be in accordance with AASHTO M 213.

906.02 Joint Sealing Materials

10 **(a) Joint Sealers**

Joint sealers shall consist of materials which are intended to be used in sealing joints and cracks in pavements and structures.

1. Silicone Joint Sealants

a. Physical Requirements

Silicone joint sealants shall be in accordance with ASTM D 5893.

b. Field Evaluation

- 20 All silicone joint sealants complying with the physical requirements will be subjected to a field evaluation before approval for general use is granted. The Department will maintain a list of approved Joint Sealant materials, which comply with the physical requirements and field evaluation.

c. Specific Requirements for Installation of Silicone Joint Sealant

- 30 The sealant shall be stored in the original unopened container at or below 90°F (32°C). The sealant shall be placed when the ambient temperature is above 40°F (4°C). The equipment used shall be adequate for the placement of the sealant and shall meet the sealant manufacturer's recommendations. Air compressors used for the placement of this sealant shall be equipped with traps which remove moisture and oil from the air.

- 40 The approved sealants which are self leveling shall be identified as such on the Department's list of approved Joint Sealant materials, and will not require tooling. Sealants not identified as self leveling on the approved list shall be tooled or applied in such a manner which causes them to wet the joint faces. Such sealants which are not formulated for self leveling will not position properly in the joint under its own weight (mass). A backer rod as set out herein shall be used to control sealant configuration and facilitate tooling. Applicable joint configurations shall be as shown on the plans. After a joint has been sealed, all surplus joint sealer on the pavement surfaces shall be promptly removed. Traffic shall not be permitted over sealed joints until the sealer is tack free.

The sealant shall be delivered in containers plainly marked with manufacturer's name or trade mark.

2. Hot Poured Joint Sealant

50 **a. General Requirements**

The sealant shall be in accordance with AASHTO M 324, Type II. The material shall be tested in accordance with ASTM D 5329 except that after blotting, the surface of the blocks shall be blown dry with compressed air.

b. Packaging and Marking

The sealing compound shall be delivered in the manufacturer's original sealed container. Each container shall be legibly marked with the name of the manufacturer, the trade name of the sealer, the manufacturing batch number or lot, the pouring temperature, and the safe heating temperature.

60

c. Requirements for Installation

The sealant shall be used in accordance with the manufacturer's recommendations. A backer rod as set out herein shall be used to provide the joint configuration in accordance with the standard drawings.

d. Sampling and Testing

Samples may be taken prior to delivery provided the plant or warehouse is located in the geographical area serviced by the Department's inspectors. If not sampled prior to delivery, it will be sampled at the job site. Scheduling shall provide two weeks after delivery to the Materials and Tests Division for testing. The basis for use will be the applicable laboratory number.

70

3. Preformed Elastomeric Joint Seals

This joint shall be in accordance with AASHTO M 220. Joint seals furnished under this specification shall be covered by a type A certification in accordance with 916.03(b).

4. Asphalt Rubber Sealant

80

a. Requirements

The asphalt rubber sealant shall be a single component asphalt sealant that contains a minimum of 18% recycled rubber by weight of asphaltic components. Seventy percent of the rubber shall be ground reclaimed rubber. The asphalt rubber sealant shall be in accordance with ASTM D 6690, type I.

b. Packaging

The asphalt rubber sealant shall be delivered in the manufacturer's original sealed packaging. Each container shall be marked legibly with the manufacturer's name, name of material, the batch or lot number, the expiration date, the recommended pouring temperature, and the safe heating temperature.

90

c. Installation

The rubber asphalt sealant shall be installed in accordance with manufacturer's recommendations. The backer rod shall be in accordance with manufacturer's specifications and 906.02(b) if a backer rod is required.

d. Certification

The Contractor shall supply a type A certification in accordance with 916 for each batch or lot of material furnished.

100

(b) Backer Rod

The rod is to act as a bond breaker, to control the thickness of the bead, and to provide support for any required tooling of the sealant.

1. Requirements

When hot poured material is used, compatibility of the backer rod with the hot sealant shall be verified before use. The backer rod shall be a closed cell expanded polyethylene foam or an isomeric polymer foam rod. Diameter and placement shall be as shown on the plans.

110

2. Certification

Backer rod furnished under this specification shall be covered by a type C certification in accordance with 916.

906.03 Joint Mortar

Pipe joint mortar shall consist of one part portland cement and two parts sand with water as necessary to obtain the required consistency. Mortar shall be used within 30 min after its preparation.

120

906.04 Rubber Type Gaskets

Ring gaskets for pipe shall be in accordance with AASHTO M 315, Standard Gasket. Material furnished under this specification shall be covered by a type B certification in accordance with 916.

906.05 Bituminous Mastic Pipe Joint Sealer

This is a cold applied, mineral filled, joint sealing compound for joints of bell and spigot or tongue and groove concrete or clay pipe. Joint sealing compound shall be in accordance with AASHTO M 198.

130

(a) General Requirements

This sealer shall be a smooth uniform mixture, not thickened or livered, and shall show no separation which cannot be overcome easily by stirring. The material shall be of such consistency and proportions that it can be applied readily with a trowel, putty knife, or caulking gun without pulling or drawing. It shall exhibit good adhesive and cohesive properties when applied to metal, concrete, or vitrified clay surfaces. It shall not be damaged by exposure to below freezing temperatures and shall be applicable when the temperature of the air is between 20°F and 100°F (-7°C and 38°C).

140

(b) Certification

Material furnished under this specification shall be covered by a type C certification in accordance with 916.

906.06

906.06 Joint Membrane System for Precast Reinforced Concrete Box Sections

The Contractor may elect to use an approved self-adhering membrane system in lieu of the detail shown on the plans.

Joint membrane systems shall be in accordance with the following requirements.

150

PROPERTY	TEST METHOD	REQUIREMENTS
Thickness	ASTM D 3767 Procedure A	1.5 mm Min.
Tensile Strength	Grab Tensile Strength, ASTM D 4632	650 N Min.
Elongation	Grab Tensile Strength, ASTM D 4632	20% Min.
Bursting Strength	Mullen Burst, ASTM D 3786	2.0 MPa Min.
Peel Strength	ASTM D 903	850 N/m Min.
Permeance	ASTM E 96, Water Method	60 ng/m ² Pa Max.

160

170

The membrane system shall be supplied in roll widths of at least 12 in. (300 mm). The membrane shall be a composite sheet material composed of a non-woven fabric and a polymer membrane material. The membrane shall be protected by a release paper.

Material furnished under this specification shall be covered by a type B certification in accordance with 916.

906.07 Bridge Expansion Joints

180

Joints, including anchor assemblies, shall be shop fabricated, delivered and installed as a continuous unit for lengths up to 46 ft (14 m). Joints longer than 46 ft (14 m) shall be furnished in continuous units or in appropriate shorter sections as shown on the shop drawings and approved by the Engineer. Joints used in stage construction shall be furnished in sections appropriate to accommodate the work. All joints furnished in sections shall be spliced with welds, with ends prepared for welding in the shop. All welds shall be in accordance with 711.32.

The profile of the joint in the roadway area shall conform to the roadway cross section. Where changes in direction are required, such as at curbs or concrete rails, the sections shall be cut to the bevel required to produce the same cross section on

- 190 each piece being joined. Slider plates shall be provided at curbs, walkways, and concrete rails as part of the completed joint assembly. The slider plate shall be the same material as the extrusion and shall be galvanized in accordance with ASTM A 123.

- All welds in contact with the elastomeric seals shall be ground smooth. Metal surfaces in direct contact with the elastomeric seal shall be cleaned and treated in accordance with the manufacturer's recommendations to provide a high strength bond between the elastomeric seal and mating metal surfaces. The elastomeric seals shall be clean and free of foreign materials. All exposed structural steel surfaces, except stainless steel or polytetrafluoroethylene coated, shall be shop painted in accordance with 619.

(a) Type SS

Structural steel shall be in accordance with ASTM A 36 (A 36M), A 588 (A 588M), A 570 (A 570M), A 242 (A 242M), or Merchant Quality 1010, 1020.

Sealant and grouts shall be in accordance with the manufacturer's recommendation.

- 210 The elastomer shall be neoprene in accordance with ASTM D 5973 except that the physical requirements in Table 1 for low temperature recovery, high temperature recovery, and compression-deflection properties will not apply.

The strip seal shall be furnished in one continuous length for the entire limits of the installed joint. Field splicing of the strip seal will not be permitted. Miter cut, vulcanized shop splices will be required in the strip seal. The shop vulcanization of the strip seal splice may be either a hot or cold process so long as the process produces a splice of equal or greater strength than the elastomer.

- 220 The structural steel and polyurethane sealant shall be covered by a type C certification, and the elastomer shall be covered by a type B certification, both in accordance with 916.

(b) Type M

- This joint shall consist of prefabricated multiple elastomeric seals, separator beams, and support bars. The structural design of the joint shall be in accordance with AASHTO Standard Specifications for Highway Bridges and shall be for the same design loading as the bridge structure at which it is to be installed, but not less than HS 20-44 truck loading and impact. The joint shall be designed to accommodate the movement shown on the plans.

The joint assembly shall be preset by the manufacturer in accordance with the approved shop drawings, joint setting data and specifications. The assembly shall be properly secured for shipping and contain provision for final field adjustment at the

time of installation. The manufacturer shall furnish a copy of the installation instructions prior to the placement of these joints.

Structural steel shall be in accordance with ASTM A 36 (A 36M), A 570 (A 570M), A 242 (A 242M), A 588 (A 588M), or Merchant Quality 1010, 1020 in accordance with ASTM A 576.

Sealant and grout shall be in accordance with the joint manufacturer's recommendation.

Elastomer shall be neoprene in accordance with ASTM D 3542.

The structural steel and sealant shall be covered by a type C certification and the elastomer by a type B certification, both in accordance with 916.

Bearings above and below the support bar shall be a nylon or urethane compound with polytetrafluorethylene riding surfaces. All components of the system shall be accessible to periodic inspection and component replacement if necessary.

The elastomer seals shall be in accordance with the requirements as follows:

1. be held in place by compressive forces throughout the normal limits of joint movement;
2. be supplied and installed in one piece;
3. have corner locked edges for a watertight fit;
4. not be any part of the load bearing riding surface;
5. be installed using seal lubricant-adhesive or be mechanically clamped in position to produce a watertight seal;
6. have a shape which promotes self removal of foreign material during normal joint operation;
7. be recessed 1/2 in. (13 mm) below the riding surface throughout the normal limits of joint movement;
8. be held in position by the separator beams;
9. have a hollow box shape for joints utilizing urethane equilibrium control spacers or a strip seal configuration for joints using a mechanical linkage to maintain equidistant separator beam spacing. The joint shall have a maximum opening of 3 in. (75 mm) per seal.

The separator beams shall be in accordance with the requirements as follows:

1. provide the riding surface across the joint;
2. have an extruded or machined shape suitable to hold the seals;
3. be stable against tipping, tilting, or lifting during application of traffic loads by use of a suitable shape and connection to the support bar;

4. be supported individually on their own independent support bars;
5. maintain equidistant spacing through use of suitable urethane equilibrium type control spacers to counter the compressive forces of the seals or through a positive horizontal mechanical linkage or proportioning bar.

The support bars shall be in accordance with the requirements as follows:

- 290 1. incorporate stainless steel sliding surfaces to minimize resistance to joint movements;
2. be supported above, below, and laterally as required to prevent lifting, to transmit bearing loads, and to maintain positioning of the bar.

All support bar boxes and joint housings shall have top, bottom, and sides made of steel plate with 1/2 in. (13 mm) minimum thickness. Anchorages shall consist of looped No. 5 reinforcing bars welded to 1/2 in. (13 mm) steel plates spaced at 9 in. (230 mm) centers. Non-welded steel to steel contact will not be permitted.

SECTION 907 – CONCRETE, CLAY, AND PLASTIC DRAINAGE COMPONENTS

907.01 Non-Reinforced Concrete Pipe

This pipe shall be in accordance with AASHTO M 86 (M 86M) for the specified diameter and strength classes. When used for underdrain, each section of pipe shall not exceed 3 ft (0.9 m) in length.

907.02 Reinforced Concrete Pipe

- 10 This pipe shall be in accordance with AASHTO M 170 (M 170M) for the specified diameters and strength classes. Unless otherwise specified, pipe wall design and use of elliptical reinforcement in circular pipe are optional.

When the pipe listed below is specified or permitted, it shall be in accordance with the class noted.

	Extra Strength Reinforced Concrete Pipe.....	Class IV
	Heavy Duty Reinforced Concrete Pipe.....	Class V
	Reinforced Concrete Pipe.....	Class III
20	Reinforced Concrete Sewer Pipe.....	Class II

Precast reinforced concrete end sections shall be in accordance with the cited specifications to the extent to which they apply.

The manufacturer of the steel reinforcement shall furnish to the pipe manufacturer a mill test report. The pipe manufacturer shall certify, on furnished forms that:

- 30 (a) The placement of the steel reinforcement is in accordance with the Standard Specifications.
- (b) The area of steel reinforcement per linear foot (meter) of pipe is in accordance with or exceeds the specification requirements.
- (c) Based on the steel reinforcement manufacturer's mill test report, the steel used in the pipe is in accordance with the specification requirements.
- 40 (d) Copies of the steel reinforcement manufacturer's mill test reports shall be on file and available to review for five years.

907.03 Reinforced Concrete Horizontal Elliptical Pipe

This pipe shall be in accordance with AASHTO M 207 (M 207M). Certification shall be in accordance with 907.02.

907.04 Precast Concrete Manholes, Inlets, and Catch Basins

These units shall be in accordance with AASHTO M 199 (M 199M). References to diameter are applicable to corresponding dimensions in other than circular sections. Absorption tests will not be required for flat top or base slabs. Certification
50 shall be in accordance with 907.02.

No more than three holes shall be cast or drilled in each section for the purpose of handling.

In addition to the requirements of AASHTO M 199 (M 199M), the manhole steps shall be permanently marked with the specific step designation, and the manufacturer's identification. This marking shall remain exposed after installation.

Steps shall be selected from the list of approved Manhole Steps. Requests for
60 adding steps to the list shall be accompanied by: a certified test report demonstrating compliance with AASHTO M 199 (M 199M); instruction for proper installation; complete product description including the ancillary equipment required for installation; and a sample step. The Department may perform a laboratory evaluation of specific steps and may not add steps to the list which are not furnished with ancillary installation equipment.

907.05 Precast Reinforced Concrete Box Sections

Box sections with 2 ft (0.6 m) of cover or greater shall be in accordance with AASHTO M 259 (M 259M) and box sections with less than 2 ft (0.6 m) of cover
70 which are subject to highway loadings shall be in accordance with AASTHO M 273 (M 273M). Box sections furnished in accordance with AASHTO M 259 (M 259M) or AASHTO M 273 (M 273M) shall have a minimum 28 day compressive strength

of 5,000 psi (34.5 MPa), as determined by concrete cores. Certification shall be in accordance with 907.02.

80 Not more than four holes may be cast or drilled, or otherwise neatly made in the shell of each piece of box section for the purpose of handling or laying. The holes shall be tapered unless drilled, and the tapered holes shall be filled with portland cement mortar or with precast concrete plugs, which shall be secured with portland cement mortar or other approved adhesive, before backfilling. Drilled holes shall be filled with portland cement mortar.

907.06 Blank

907.07 Blank

907.08 Clay Pipe

90 This pipe shall be in accordance with ASTM C 700 for the specified diameters and strength classes for circular non-perforated pipe. When specified, the bell shall have integral spacer lugs to provide for an annular opening and self centering feature. The pipe may be glazed or unglazed, unless otherwise specified.

907.09 Perforated Clay Pipe

This pipe shall be in accordance with ASTM C 700 for the specified dimensions and strength classes. It may be glazed or unglazed, unless otherwise specified. Where vitrified clay culvert pipe is furnished, a pipe end section compatible to that as required for concrete or metal pipe shall be used.

907.10 Blank

100

907.11 Drain Tile

This pipe shall be in accordance with AASHTO M 178 (M 178M) for concrete or ASTM C 4 for clay for the specified material, diameters, and quality classes. Standard quality drain tile shall not be used. When specified, the pipe spigot shall have integral spacer lugs to provide for an annular opening and self centering feature.

907.12 Blank

110

907.13 Blank

907.14 Blank

907.15 Blank

907.16 Plastic Pipe Manufacturer Requirements

A list of approved Plastic Pipe, Fittings, Solvent Cement, and Elastomeric Seals will be maintained by the Department. The list will specify the manufacturer, plastic

120 pipe, solvent cement, or elastomeric seals designation. All of these materials shall comply with the applicable AASHTO or ASTM requirements and will only be accepted from qualified manufacturers. The manufacturer is defined as the plant which produces the plastic pipe, fittings, solvent cements, or elastomeric seals. The manufacturer shall become qualified by establishing a history of satisfactory quality control of these materials as evidenced by the test results performed by the manufacturer's testing laboratory.

Manufacturers requesting to be qualified to supply plastic pipe, fittings, solvent cements, or elastomeric seals shall submit the following to the Materials and Tests Division.

130

(a) a quality control plan which encompasses all aspects of the production process starting with the raw materials and concluding with the shipment of the finished product. The quality control plan shall provide for a 95% or greater statistical assurance that the materials will be in accordance with the specifications, and include type and frequency of sampling and testing;

140

(b) documentation indicating that the manufacturer's testing laboratory is in accordance with the provisions of AASHTO R 18;

(c) a monthly summary of all test results for the previous 12 months production for each type of plastic pipe, fittings, solvent cements and elastomeric seals;

(d) a material safety data sheet for each material produced; and

150

(e) to maintain qualification, the manufacturer shall submit to the Materials and Tests Division a monthly summary of all tests for each type of pipe, pipe fittings, solvent cements, and elastomeric seals produced. If a specific type of pipe, pipe fitting, solvent cement, or elastomeric seals is not manufactured in a given month, the monthly submittal shall state: "No type _____ pipe, pipe fitting, solvent cement, or elastomeric seals was manufactured during the month of _____, 20__".

The manufacturer shall provide the type of certification specified in the Frequency Manual and in accordance with 916 which designates that hydrostatic design basis, HDB, rated resins or non-HDB rated resins were used in the manufacture of the pipe and fittings.

160

907.17 Corrugated Polyethylene Drainage Tubing

Tubing and fittings shall be in accordance with AASHTO M 252. Perforations shall be required for tubing used as a longitudinal underdrain. Qualification requirements for the manufacturers shall be in accordance with 907.16.

907.18 Perforated Polyvinyl Chloride Semicircular Pipe

Perforated polyvinyl chloride semicircular pipe may be used as an alternate to 6 in. (150 mm) or less diameter pipe or tile. Pipe shall be in accordance with ASTM D 3034, SDR 35. This semicircular pipe shall have a smooth top and a smooth, semicircular bottom, nominally 4 5/8 in. (118 mm) in diameter, with perforations uniformly distributed along the top of the bottom section in accordance with AASHTO M 252 perforation requirements. The top section shall extend a minimum of 1/2 in. (13 mm) beyond the top of the semicircular section. The top section shall be approximately 6 3/8 in. (162 mm) wide including the sloping overhangs on each side. Qualification requirements for the manufacturers shall be in accordance with 907.16.

907.19 Corrugated Polyethylene Pipe

Pipe and fittings shall be in accordance with AASHTO M 294. The compound used in manufacturing this pipe shall have a minimum cell class in accordance with 335420C as shown in ASTM D 3350. Qualification requirements for the manufacturers shall be in accordance with 907.16.

907.20 Ribbed Polyethylene Pipe

Pipe and fittings shall be in accordance with ASTM F 894 for the specified sizes. Qualification requirements for the manufacturers shall be in accordance with 907.16.

907.21 Smooth Wall Polyethylene Pipe

Pipe shall be in accordance with ASTM F 714 for nominal diameters of 39 in. (1000 mm) or less. Fittings shall be in accordance with ASTM F 1055. The pipe sizes shall be in accordance with ISO sizing system. The pipe dimension ratio shall be 26 or less. The compound used in manufacturing this type of pipe shall have a minimum cell class in accordance with 335434C as shown in ASTM D 3350. Qualification requirements for the manufacturers shall be in accordance with 907.16.

907.22 Profile Wall Polyvinyl Chloride Pipe

Pipe and fittings shall be in accordance with AASHTO M 304 for nominal diameters of 36 in. (900 mm) or less. Perforations shall be required when used as a longitudinal underdrain or end bent drain pipe. Qualification requirements for the manufacturers shall be in accordance with 907.16.

907.23 Smooth Wall Polyvinyl Chloride Pipe

Pipe and fittings shall be in accordance with AASHTO M 278 for pipe sizes 4 in. through 15 in. (100 mm through 375 mm), and ASTM F 679 for pipe sizes 18 in. through 27 in. (450 mm through 675 mm). The compound used in manufacturing pipe shall have a minimum cell class in accordance with 12454C as shown in ASTM D 1784. Qualification requirements for the manufacturers shall be in accordance with 907.16.

907.24

210 **907.24 Smooth Wall Pipe for Outlets**

Pipe and pipe fittings shall be smooth wall, non-perforated plastic pipe. Qualification requirements for the manufacturers shall be in accordance with 907.16.

(a) Type PSM Polyvinyl Chloride Pipe and Fittings

Pipe and fittings shall be in accordance with ASTM D 3034, SDR 23.5.

(b) Schedule 40 Polyvinyl Chloride Pipe

220 Pipe shall be in accordance with ASTM D 1785 and shall have a minimum pipe stiffness of 150 psi (1030 kPa) at 5% deflection when determined in accordance with ASTM D 2412.

907.25 Thermoplastic Pipe Liners

Thermoplastic pipe liners shall be high density polyethylene or polyvinyl chloride pipe with sufficient rigidity to withstand the installation operation and shall exhibit a minimum amount of distortion. The liner shall be free from visible cracks, holes, foreign inclusions, or other defects. Thermoplastic pipe liners may be added to the Department's approved list by completing the requirements of ITM 806, Procedure A.

230 **(a) Solid Wall HDPE Pipe Liner**

Solid wall HDPE pipe liner shall be in accordance with ASTM F 714. The maximum standard dimension ratio, SDR, for the liner as defined in ASTM F 412 shall be 32.5. The resin used in the fabrication of the liner shall have a minimum cell classification of 345464C as shown in ASTM D 3350.

A 12 in. (300 mm) section of the liner shall show no evidence of splitting, cracking, or breaking when compressed between parallel plates to 40% of its outside diameter within 2 to 5 min.

240 **(b) Profile Wall HDPE Pipe Liner**

Profile wall HDPE pipe liner shall be in accordance with ASTM F 894. The minimum liner ring stiffness constant, RSC, shall be 100. The resin used in the fabrication of the liner shall have a minimum cell classification of 345434C as shown in ASTM D 3350.

(c) Profile Wall PVC Pipe Liner

Profile wall PVC pipe liner shall be in accordance with ASTM F 949, with the exception that PVC material with a minimum cell classification of 12454B as shown in ASTM D 1784 is added to the list of acceptable PVC materials.

250

907.26 Solvent Cements for Polyvinyl Chloride Pipe and Pipe Fittings

Solvent cement for polyvinyl chloride pipe and fittings shall be in accordance with ASTM D 2564. Qualification requirements for the manufacturers of this material shall be in accordance with 907.16.

907.27 Elastomeric Seals

Elastomeric seals for joining plastic pipe shall be in accordance with ASTM F 477. Qualification requirements for the manufacturers of this material shall be in accordance with 907.16.

260

SECTION 908 – METAL PIPE**908.01 Blank****908.02 Corrugated Steel Pipe and Pipe-Arches**

Corrugated steel pipe and pipe-arches shall be type I, IA, II, or IIA in accordance with AASHTO M 36 (M 36M).

10 Corrugated steel pipe, pipe-arches, and coupling bands shall be zinc coated steel or aluminum coated steel in accordance with AASHTO M 36 (M 36M), except as noted herein. They may be fabricated with circumferential corrugations and riveted lap joint construction or with helical corrugations with continuous lock or welded seam extending from end to end of each length of pipe. Reforming the ends of helical corrugated pipe to form circumferential corrugations will be permitted to allow use of circumferential corrugated coupling bands. The reforming shall be limited to the length required to accommodate the coupling bands and in such a manner that there is not appreciable slippage of the seam nor a plane of weakness created.

20 Polymer precoated galvanized corrugated steel pipe type IA and pipe-arch type IIA have an outer shell of corrugated sheet with helical corrugations and an inner liner of smooth sheet attached to the shell with a helical lock seam.

Fittings, including stub-tee connections and saddle connectors specified in 715.06, shall be shop fabricated. Damage to the coating on fittings shall be repaired in accordance with AASHTO M 36.

30 If the pipe or pipe-arch invert is to be paved, it shall first be coated over half its circumference in accordance with 908.07. The paved invert shall then be constructed in accordance with 908.07.

Sheet metal used to fabricate pipe shall be the same brand from the same manufacturer in any one length of finished pipe.

The manufacturer shall furnish to the fabricator a certified mill report for materials shipped to the fabricator. This certified mill report shall list the kind of base metal, actual test results of the chemical analysis and mechanical tests of each heat, the thickness, the weight (mass) of coating, and shall certify that the material complies with specified requirements for the type of metal furnished.

40

The fabricator shall certify, on furnished forms that:

- (a) the fabricated structure has been manufactured in accordance with these Standard Specifications;
- (b) based on the sheet manufacturer's certified mill report, the materials used in fabricating the structure were tested and the test results are in accordance with the specified requirements; and
- 50 (c) copies of the sheet manufacturer's certified mill report shall be on file and available to review for five years.

908.03 Blank

908.04 Corrugated Aluminum Alloy Pipe and Pipe-Arches

Pipes, pipe-arches, and coupling bands shall be in accordance with AASHTO M 196 (M 196M). The pipe shall be type I, IA, II, or IIA. If the pipe invert is to be paved, it shall be in accordance with 908.07.

- 60 The sheet manufacturer's certified mill report and the fabricator's certification shall be in accordance with 908.02, except the documents shall be in accordance with the applicable requirements of AASHTO M 196 (M 196M).

Where aluminum alloy pipe culvert is furnished, aluminum alloy end sections shall also be furnished. All component parts shall be aluminum alloy.

908.05 Blank

908.06 Metal End Sections

- 70 The end section's metal shall be in accordance with AASHTO M 36 (M 36M) or M 196 (M 196M), whichever is applicable. The sheet metal manufacturer's certified mill report and the fabricator's certification shall be in accordance with 908.02 or 908.04, whichever is applicable.

End sections consisting of multiple panels shall have lap seams which shall be tightly jointed with 3/8 in. (M10) galvanized rivets or bolts.

- 80 All steel pipe end sections shall have a toe plate anchor constructed of 0.138 in. (3.5 mm) thick galvanized steel. The toe plate anchor shall be match punched to fit holes in the skirt lip, and shall be supplied loose, and complete with 3/8 in. (M10) diameter galvanized bolts.

Straps for pipe end sections shall be either galvanized No. 6 (20M) reinforcing bars or zinc coated 3/8 in. (10 mm) diameter aircraft cable.

908.07 Fully Bituminous Coated Corrugated and Lined Steel Pipe and Pipe-Arches

The material, fabrication, the manufacturer's certified mill report, and fabricator's certification shall be in accordance with the applicable requirements of 908.02. Coupling bands shall be fully bituminous coated.

After fabrication, the pipe or pipe-arch shall be fully bituminous coated.

Connecting or coupling bands shall be of the 2-piece type when used with coated pipe of 36 in. (900 mm) diameter or larger.

The asphalt material for coating shall be in accordance with 902.01(e). Samples of the asphalt material will be obtained from the working tank prior to or during coating of the pipe, or from strippings off the pipe after coating. When applied to the pipe, the asphalt material shall be free from impurities. The metal shall be free from grease, dust, or moisture. Either process set out below may be used for application.

- (a) When the pipe is not preheated, the temperature of the asphalt at the time of immersion shall be $400^{\circ}\text{F} \pm 5^{\circ}\text{F}$ ($204^{\circ}\text{C} \pm 3^{\circ}\text{C}$). The duration of the immersion in the asphalt shall be in accordance with the following:

Thickness	0.052 in. (1.32 mm)	0.064 in. (1.63 mm)	0.079 in. (2.01 mm)	0.109 in. (2.77 mm)	0.138 in. (3.51 mm)	0.168 in. (4.27 mm)
Minimum Immersion Time for first Dip (min)	2.0	2.5	3.0	5.0	6.5	8.0

- (b) When the pipe is preheated it shall be brought to a temperature of 300°F (149°C) and the asphalt shall be heated to a temperature of $380^{\circ}\text{F} \pm 5^{\circ}\text{F}$ ($193^{\circ}\text{C} \pm 3^{\circ}\text{C}$) before the pipe is dipped.

In either process, the pipe shall be dipped a second time or more if necessary, to give a minimum thickness of 0.05 in. (1.3 mm).

If paved invert is specified, the pipe or pipe-arch shall first be fully coated as required. Additional bituminous material shall be applied in the bottom section to form a smooth pavement. Except where the upper edges intersect the corrugations, the pavement shall have a minimum thickness of 1/8 in. (3 mm) above the crests of the corrugations. The pavement shall be applied to the lower quarter of the circumference.

The manufacturer of the asphalt material shall furnish to the pipe fabricator the type of certification specified in the Frequency Manual and in accordance with 916 for each shipment or lot of asphalt material. The pipe fabricator shall keep these certifications on file and available to review for five years. In addition, samples from the working tank will be obtained for verification of requirements.

908.08 Polymer Precoated Galvanized Corrugated Steel Culvert Pipe and Pipe-Arches

- 130 The pipe or pipe-arch and coupling bands shall be in accordance with AASHTO M 245 (M 245M) with additions in accordance with 908.02. The polymer precoated galvanized steel sheets shall be in accordance with AASHTO M 246 (M 246M), Grade 10/10 (250/250).

908.09 Structural Plate Pipe, Pipe-Arches, and Arches

(a) Steel

- 140 Steel structural plate pipe, pipe-arches, and arches shall be constructed from individually galvanized corrugated steel plates as described herein. For pipes and pipe-arches having a thickness less than 0.280 in. (7.11 mm), the bottom plates shall be of the next greater thickness than that specified for the top and side plates, not including corner plates for pipe-arches. The individual plates shall be in accordance with AASHTO M 167 (M 167M) and Section 26 of the AASHTO Standard Specifications for Highway Bridges, Division II.

The materials and fabrication shall be as follows:

- 150 1. The minimum corner plate radius of the arc joining the top and bottom plates of pipe-arches shall be 18 in. (457 mm) for openings up to and including 131 sq ft (12.2 m²) and 31 in. (787 mm) for openings over 131 sq ft (12.2 m²). The minimum radius of the arc shall be 31 in. (787 mm) for openings from 98 sq ft (9.1 m²) up to and including 214 sq ft (19.8 m²).
- 160 2. Assembly bolts shall be in accordance with AASHTO M 164 (M 164M), ASTM A 325 (A 325M), or ASTM A 449. Nuts shall be in accordance with ASTM A 563 (A 563M), grade C (class 8S); AASTHO M 164 (M 164M); or ASTM A 325 (A 325M). Assembly bolts, nuts, and washers shall be galvanized in accordance with ASTM A 153, or be mechanically galvanized and conform to the coating thickness, adherence, and quality requirements of ASTM A 153, class C.
3. The sheet manufacturer's certified mill report and the fabricator's certification shall be furnished in accordance with 908.02, except the documents shall be in accordance with the applicable requirements of AASHTO M 167 (M 167M).

(b) Aluminum Alloy

- 170 Aluminum alloy structural plate pipe, pipe-arches, and arches shall be in accordance with AASHTO M 219 (M 219M). The sheet manufacturer's certified mill report and the fabricator's certification shall be furnished in accordance with 908.02.

908.10 Cast Iron Soil Pipe

This pipe shall be in accordance with ASTM A 74. Markings shall be in accordance with ASTM A 74 or ANSI A 40.1.

908.11 Steel Pipe

- 180 This item shall be electric-fusion, arc-welded steel pipe in accordance with ASTM A 139, grade B, or electric-resistance welded pipe in accordance with ASTM A 53, Type E, Grade B, as applicable. Material furnished under this specification shall be covered by a type C certification in accordance with 916.

908.12 Straps, Hook Bolts and Nuts Used in Anchors

- 190 Straps shall be of the type and size shown on the plans. Reinforcing bars used for straps shall meet the applicable requirements of 910.01 and shall be galvanized in accordance with ASTM A 767 (A 767M), class I. Aircraft cable used for straps shall be made of zinc coated steel wire, 3/8 in. (9.5 mm) nominal diameter, consisting of seven 19 wire flexible steel strands, with a minimum breaking strength of 14,000 lb (62.3 kN). The cable shall be in accordance with Military Specification MIL-W-83420D.

Hook bolts and nuts shall be of the size shown on the plans, shall be in accordance with ASTM A 307, and shall be galvanized in accordance with ASTM A 153. Threads shall be American Standard Coarse Thread Series Class 2 fit. Threads shall be cleaned after galvanizing to provide a free running fit. Maximum oversizing of the nut threads shall be 1/64 in. (0.4 mm).

908.13 Blank**908.14 Slotted Drain or Slotted Vane Drain Pipe**

Slotted drains shall be manufactured from helically corrugated steel pipe in accordance with AASHTO M 36 (M 36M). At the end of the pipe there shall be two annular corrugations to permit the corrugated band to fully mesh with the pipe.

- 210 The grated assembly shall be made of structural steel in accordance with AASHTO M 183 (M 183M), Grade 36. The assembly shall be suitably welded to the pipe and galvanized after assembly in accordance with AASHTO M 111. The grate shall be of the size and spacing shown on the plans and shall be welded on both sides to each bearing bar with a 3/16 in. (5 mm) fillet weld.

The size and thickness of the corrugated steel slotted drain pipe shall be as shown on the plans.

Slotted vane drain pipe shall be polyvinyl chloride in accordance with 907.23, and shall be of the diameter specified. The casting shall be in accordance with 910.05(b). The finish shall be standard black asphalt emulsion. Individual units shall have a minimum weight (mass) of 155 lb (70 kg).

SECTION 909 – PAINT AND LIQUID EPOXY**909.01 General Requirements**

All necessary facilities for inspection of materials and manufacture of coatings, paints, and ingredients shall be granted. Free access to all parts of the premises where any or all of these products are being prepared shall be allowed. Material Safety Data Sheets shall be provided.

- 10 Paints and coatings shall be furnished ready for use without modification and shall not settle, cake, curdle, liver, gel, or develop excessive change in viscosity between time of manufacture and time of use. It shall remain capable of being readily dispersed with a paddle, or other approved methods, to a consistency appropriate for the intended use. Paints and coatings may be sampled and tested at any time prior to use. If, for any reason, re-sampling and re-testing following initial or prior approval is indicated, the latest test results shall prevail over all previous tests for material that has not been used. Previously approved paint or coating that are stored for future use may be re-sampled and re-tested.

- 20 Paints and coatings shall be delivered in new containers of such strength, durability, design, fabrication, and material that the paint shall be suitably protected in transit and in storage against any change in characteristics which would cause rejection on the basis of laboratory or field evaluation. Each container shall bear a label which shows the name and address of the manufacturer, kind of paint or coating, formula identification, date of manufacture, and lot or batch number. The weight per gallon (mass per volume) lb per gal. (kg/L) of the paint shall be accurately determined at 77°F (25°C). The container shall be so filled that the net weight (mass) of the material in the container shall be the product of the weight per gallon (mass per volume) at 77°F (25°C) and the stated number of gallons (liters) in the container.

30

All containers shall be labeled in accordance with the OSHA requirements for labeling of hazardous chemicals as described in the Hazardous Communications Standard.

909.02 For Metal

Paints for metal surfaces shall be in accordance with the requirements shown below.

(a) Zinc Primers

40

1. Multi-Component Inorganic Zinc Silicate Primer

These primers shall be of the self-cure type which, when mixed and applied in accordance with these specifications, shall cure without the use of a separate curing solution. The multi-component inorganic zinc silicate primers shall have a maximum of three components. The components of each primer shall be packaged in such

proportions that when the full quantity of each component is mixed together, the specified mixed primer shall be yielded.

These inorganic primers shall be in accordance with AASHTO M 300.

50

2. Organic Zinc Primer

Organic zinc primer shall be a self-curing type primer. It shall be in accordance with SSPC paint specification No. 20 type II with exceptions as follows.

Table I, total zinc dust, percent by weight (mass) of pigment requirement shall be a minimum of 84% metallic zinc. Table I, total zinc dust, percent by weight (mass) of total solids requirement shall be a minimum of 72% metallic zinc. The viscosity variation in Krebs Units in Section 6.2 shall be ± 10 .

60 The organic zinc primer shall also be in accordance with the requirements as follows.

- a. The viscosity shall be 70 to 100 Krebs units.
- b. The weight per gallon (mass per volume) shall be a minimum of 17.0 lb/gal. (2.04 kg/L).
- c. The dry time shall be a maximum of 1 h set-to-touch and 24 h dry hard when applied at 6 mil (150 μm) blade clearance to a tin coated steel panel at 25°C and 60% \pm 5% relative humidity.
- d. The infrared spectrum of the vehicle shall match the infrared spectrum of the vehicle of the sample submitted for formulation approval.
- e. The organic zinc primer shall not exceed 3.5 lb/gal. (0.419 kg/L) volatile organic compounds. The cured film shall not contain toxic heavy metals above the regulatory levels of 40 CFR 261.24.
- f. The organic zinc primer shall be compatible with inorganic zinc and finish coat paints already on the bridge. The color shall be able to produce a distinct contrast with blast cleaned metal surface and the finish coat. The cured organic zinc film shall be compatible with a top coating of waterborne finish coat paint.

70

80

3. Approval of Formulation

90 The manufacturer shall obtain approval of the formulation prior to furnishing the primers. Only zinc primers from the Department's list of approved Coating

Formulations shall be used. Zinc primers will be placed and maintained on the Department's list of approved Coating Formulations in accordance with ITM 606.

(b) Epoxy Intermediate Paint

Epoxy intermediate paint shall be a two component coating consisting of an epoxy resin and a curing agent, together with prime and filler pigments, colorants, gellant, leveling agents and solvents. When mixed, this coating shall be suitable for application over inorganic and organic zinc primers and shall be compatible with a polyurethane finish coat. The color of this coating shall contrast significantly from the other coatings within the coating system.

The mixed paint shall be in accordance with the requirements as follows.

	Volatile organic compounds, ASTM D 3960, Max.	336 g/L
	Volume solids, ASTM D 2697, Min.	60%
	Set-to-touch, ASTM D 1640, 6 mils (150 µm) wet film thickness, 25 ± 1°C, Max.	4 h
	Potlife, 25 ± 1°C, Min.	6 h
	Weight (mass)/volume variance from the initially approved batch, ASTM D 1475, 25°C, Max.	0.060 kg/L
110	Total solids variance from the initially approved batch, ASTM D 2369, Max.	3.0%

The infrared spectra of each component and of the mixed coating shall essentially match the spectrums of the initially approved batch.

(c) Polyurethane Finish Coat

Polyurethane finish coat shall be a two component polyester or acrylic aliphatic polyurethane suitable for use as a finish coat over epoxy intermediate paint.

The mixed paint shall be in accordance with the requirements as follows.

	Volatile organic compounds, ASTM D 3960, Max.	336 g/L
	Volume solids, ASTM D 2697, Min.	60%
	Set-to-touch, ASTM D 1640, 5 mils (127 µm) wet film thickness, 25 ± 1°C, 50 ± 10% relative humidity, Min.	30 min
	Total solids ASTM D 2369, Min.	70%
	Specular gloss, 60°, ASTM D 523, Min.	75
	Viscosity, ASTM D 562, Krebs Units, Max.	100
130	Contrast ratio, ASTM D 2805, 5 ± 0.5 mils (127 ± 13 µm) wet film thickness, dried 24 h @ 25 ± 2°C on Leneta Form 2A or 2C, Min.	0.95
	Dry hard, ASTM D 1640, 5 mils (127 µm) wet film thickness, 25 ± 1°C, 50 ± 10% relative humidity, Max.	24 h

The infrared spectra of each component and of the mixed coating shall essentially match the spectrums of the initially approved batch.

The color of the dried paint film shall match the color number of Federal Standard 595A as follows.

Color No.	Color
14260	Green
15450	Light Blue
17886	White
13538	Yellow
13711	Buff
17038	Black

(d) Waterborne Finish Paint

The waterborne finish coating shall be a single package, high build acrylic emulsion for use as a finish coat over inorganic and organic zinc primers. It shall be compatible with and adhere to the cured zinc primers.

1. Vehicle Component

The vehicle shall consist of an acrylic emulsion together with the necessary antifoamers, cosolvents, coalescing agent, preservatives, and antifreeze in order to produce a coating in accordance with this specification.

2. Pigment Component

The active pigment shall consist of titanium dioxide in accordance with ASTM D 476, type IV, and non-reactive color retentive tinting pigments. The pigment shall contain extenders and additives as required for proper application.

3. Mixed Paint Properties

The mixed paint shall be in accordance with the requirements as follows:

160	Viscosity, ASTM D 562, Kneb Units	80 – 100
	Weight (mass)/volume, ASTM D 1475, deviation from approval formulation, Max.	0.2 lb/gal. (0.024 kg/L)
	Pigment grind, ASTM D 1210, Hegman, Min.	5
	Total solids, % by weight (mass), ASTM D 2369, Min.	48
	Vehicle solids, % of vehicle by weight (mass), Min.	37.5
	Dry time, ASTM D 1640, 3 mils (75 µm) wet film thickness on a tin coated steel panel @ 25 ± 1°C and 50 ± 5% relative humidity, Max:	
	Set-to-touch, h	1
170	Dry hard, h	24
	Contrast ratio, ASTM D 2805, 5 ± 0.5 mils (125 ± 13 µm) wet film thickness dried 24 h @ 25 ± 2°C on Leneta Form 2A or 2C, Min.	0.97

909.02

Specular gloss, 60°, 10 mils \pm 0.5 mils (250 \pm 13 μ m) wet film thickness
on a tin coated steel panel, dried 48 h @ 25°C and 50 \pm 5% relative
humidity, ASTM D 523, Max.....30
pH, ASTM E 70.....7.0 – 9.0
Volatile organic compounds, ASTM D 3960,
Max.....1.50 lb/gal. (0.180 kg/L)

180

The infrared spectrum of the vehicle when extracted from the mixed paint in
accordance with ASTM D 3168 shall match the infrared spectrum of the sample
submitted for formulation approval.

The mixed paint shall be in accordance with the requirements of Sections 5.4
through 5.17 of SSPC paint specification No. 24.

The cured waterborne finish paint shall not contain toxic heavy metals above the
regulatory levels of 40 CFR 261.24.

190

4. Color

The color of the dried paint film shall match the color number of Federal
Standard 595a as follows.

Color No.	Color
24227	Green
24466	Light Green
25526	Light Blue
27780	White
23538	Yellow
23717	Buff
27038	Black

5. Approval of Formulation

The manufacturer shall obtain approval of the formulation prior to furnishing the
waterborne finish paint. Only waterborne finish paint from the Department's list of
approved Coating Formulations shall be used. Waterborne finish paint formulations
will be placed and maintained on the list of approved Coating Formulations in
accordance with ITM 606.

200

(e) Finish Coat for Weathering Steel

The finish coat shall be an aliphatic polyurethane or a waterborne acrylic paint.
It shall be suitable for use as a finish coat over epoxy intermediate paint. The mixed
paint shall be in accordance with the requirements as follows.

Specular gloss, 60°, ASTM D 523, Max.25.0
Weight (mass)/volume variance from the initially approved
batch, ASTM D 1475, 25°C, Max. 0.048 kg/L

210

Total solids variance from the initially approved batch, ASTM D 2369, Max.	2.0%
Volatile Organic Compounds, ASTM D 3960, Max.	336 g/L

The dried paint film shall match color number 20045 of Federal Standard 595a.

909.03 Structural Steel Coating System

220 This coating system shall consist of an inorganic zinc primer, an epoxy intermediate paint, and a polyurethane finish coat for the painting of steel bridges and other structural steel. All of the coatings within any coating system shall be manufactured by the same manufacturer and shall be compatible with one another. All coatings shall be in accordance with 909.02.

(a) Toxicity

The cured film of each coating within the structural steel coating system shall not contain any toxic heavy metals above the limits of the regulatory levels of 40 CFR 261.24, table 1, when tested in accordance with EPA TCLP, or contain any other material which will require characterization as a hazardous waste for the disposal of the dried film.

230

(b) Resistance

The coating system shall be tested in accordance with the requirements of NEPCOAT, Specification Criteria For Protective Coatings, dated June 6, 1996. The coating system shall be in accordance with all of the acceptance criteria and shall maintain a specular gloss retention of 60% relative of the initial gloss and a maximum color change of 15 ΔE for Test No. 3, Weathering Resistance.

(c) Approval of Structural Steel Coating System

240 The manufacturer shall obtain approval of each structural steel coating system prior to furnishing any of these coatings. Only structural steel coating systems from the Department's list of approved Structural Steel Coating Systems shall be used. Structural steel coating systems will be placed and maintained on the Department's list of approved Structural Steel Coating Systems in accordance with ITM 606.

909.04 Field Paint for Wood or Metal

250 The primers for field paint shall be formulated for minimal surface preparation, provide adhesion to the substrate and be compatible with the finish coat. The primers shall not contain lead, chromium, or other heavy metals which would require classification as a hazardous waste upon removal. The primers shall comply with the current IDEM VOC regulations and shall be used as follows.

- a. For unpainted galvanized steel and other ferrous metals, use one coat of a zinc dust-zinc oxide pigmented primer.
- b. For non-ferrous metals, use one coat of primer formulated for use on non-ferrous metals.

260 The field paint finish coat shall be an exterior type coating. It shall be chalk resistant, gloss retentive, and suitable for application by brush, roller, or spray. This coating shall comply with the current IDEM VOC regulations and shall not contain lead, chromium, or other heavy metals which would require classification as a hazardous waste upon removal. The color of this coating shall be as specified.

909.05 White and Yellow Traffic Paint

(a) Blank

(b) Fast Dry Traffic Paint

270 1. General Requirements

The general requirements specified in 909.01 shall apply except as modified herein.

White and yellow traffic paint shall be used on pavements for centerlines, lane lines, or as otherwise specified. In addition to its other requirements, when glass beads are applied, it shall be such that it shows capillary action in the interstices and voids existing between the beads sufficient to cause the level of the paint to be raised approximately 2/3 the diameter of the beads to provide anchorage and refraction. The capillary action shall be such that it does not cause complete envelopment. The paint, as furnished, shall contain no glass beads.

290 The paint shall be ground to a uniform consistency, and it shall permit satisfactory application by the pressure spray type of painting machine. This painting equipment is designed to apply reflectorized lines, using a pressurized bead application method, 4 to 6 in. (100 to 150 mm) wide, at a wet film thickness of 0.015 in. (380 μ m) on clean dry pavement, with the material being heated at a maintained temperature from ambient air temperature to a maximum of 180°F (82°C), at the atomized spray gun, at a minimum ambient temperature of 40°F (4°C). The material shall be capable of being applied under these conditions at speeds of 10 to 15 mph (16 to 24 km/h). The material shall have physical characteristics which permit it to be pumped at a minimum temperature of 40°F (4°C) through pumps from the shipping container into the paint tank on the paint machine, and then by pumps through the paint machine plumbing system to and through the heat exchanger and to the spray gun at the proper pressure and temperature.

2. Specific Requirements

300 The paint shall dry to a no tracking condition in no more than 60 s. The no tracking condition shall be determined by actual application on the pavement at a wet film thickness of 15 mils (380 μ m) with white or yellow paint covered with glass beads at a rate of 6 lb/gal. (0.7 kg/L). The paint lines for this test shall be applied with the specialized striping equipment operated so as to have the paint at temperatures up to 180°F (82°C) at the spray orifice. This maximum no tracking

time shall not be exceeded when the pavement temperature varies from 35 to 120°F (2 to 49°C), and under all humidity conditions providing that the pavement is dry. The no tracking time shall be determined by passing over the paint line 60 s after paint application, in a simulated passing maneuver at a constant speed of 30 to 40 mph (48 to 64 km/h) with a passenger car. A line showing no visual deposition of the paint to the pavement surface when viewed from a distance of approximately 50 ft (15 m) from the point where the test vehicle has crossed the line shall be considered as showing no tracking and conforming to the requirement for field drying conditions. This field dry time test shall be used for production samples only.

In addition to the above, the paint shall meet the following requirements.

	Min.	Max.
Pigment, Federal Standard 141A, Method 4022, percent by weight (mass).....	54	60
Titanium Dioxide, ASTM D 476, Types II, III, and IV, white only, lb/gal. (g/L) of paint	0.8 (96)	-
320 Medium Chrome Yellow, ASTM D 211, Type III, yellow only, lb/gal. (g/L) of paint	1.2 (144)	-
Other pigments may be used, provided the amount of pigment is such that there will be a minimum of 1.04 lb/gal. (0.125 kg/L) of pure lead chromate per gallon of paint.		
Vehicle Solids, percent of vehicle by weight (mass), Federal Standard 141A, Method 4053	35	-
Total Non-Volatiles, Federal Standard 141A, Method 4042, percent by weight (mass)	72	-
330 Viscosity @ 77°F (25°C), ASTM D 562, Krebs Units.....	80	100
C.I.E. illuminant C, 2° standard observer, ASTM E 1349, percent		
White	84	-
Yellow	50	-
Color, yellow only, x-y C.I.E. coordinates for green limit, FHWA color chart of June 1965 C.I.E. illuminant C, 2° standard observer.....		
	Match the green limit ± 8%	
Contrast ratio, ASTM D 2805, wet film 15 ± 1 mil (380 ± 25 µm) black – white chart paper, air dried at least 16 h	0.96	-
340 Uncombined (free) Water, Federal Standard 141A, Method 4081, percent.....	-	1.0

(c) White and Yellow Waterborne Traffic Paint

White and yellow waterborne traffic paints shall consist of an emulsion of pigmented binder.

When glass beads are induced into the paint lines, the paint shall provide capillary action in the interstices and voids between the glass beads sufficient to cause the level of paint to raise approximately 2/3 the diameter of the glass beads. This capillary action shall not cause complete envelopment of the glass beads. The paint as furnished shall not contain glass beads. The paint shall be ground to a uniform consistency, and it shall permit satisfactory application by the pressure-spray type of painting equipment. The painting equipment shall use a pressurized bead application method that is designed to apply 4 to 6 in. (100 to 150 mm) reflectorized paint lines at paint temperature up to 150°F (65°C). The paint shall be capable of being applied at speeds of 10 to 15 mph (15 to 25 km/h).

The paint shall not darken under the heating conditions of application, or show appreciable discoloration due to sunlight exposure and aging of the paint lines. The paint shall be furnished ready for use without thinning, screening, or other modifications and shall not settle, cake, curdle, liver, gel, or have an excessive change in viscosity in the container during a period of one year after manufacture. The paint shall be capable of being stirred to a uniform consistency. The paint shall be able to withstand variations of temperatures when stored outside in the containers as delivered, and in an environment above 40°F (5°C). All paint furnished under these specifications will be rejected if it contains skins, thickened or jelly-like layers, lumps, coarse particles, dirt, or other foreign materials which prevent the proper application of the paint, or produces a non-uniform paint line. All paint which cannot be transferred by pumps on the paint equipment from the shipping containers and through the paint equipment due to excessive clogging of screens, filters, or paint guns will be rejected.

The paint shall dry to a no-tracking condition in less than 60 s. The no tracking condition shall be determined by actual application of the paint on the pavement at a wet film thickness of 15 mils (380 µm) with glass beads at a rate of 6 lb/gal. (0.7 kg/L). The paint lines for the determination of no-tracking condition shall be applied with the specialized painting equipment operated so as to have the paint at application temperatures up to 140°F (60°C) at the spray guns. This maximum no tracking time shall not be exceeded when the pavement temperature varies from 50 to 120°F (10 to 50°C), and with all relative humidity conditions providing that the pavement is dry. The no tracking time shall be determined by passing over the paint line 60 s after the paint application, in a simulated passing maneuver at a constant speed of 30 to 40 mph (50 to 65 km/h) with a passenger car. A paint line with no visual deposition of the paint to the pavement surface when viewed from a distance of approximately 50 ft (15 m) from the point where the vehicle crossed the paint line shall be considered as showing a condition of no tracking and being in accordance with the requirement.

390 **1. Composition Requirements**

The exact composition of the waterborne traffic paint shall be left to the discretion of the manufacturer, provided that the finished product is in accordance with all of the specification requirements.

The pigment portion of these paints shall be a combination of prime and extender pigments as required to produce either white or yellow waterborne traffic paint in accordance with the color and other requirements of the finished product. The yellow waterborne traffic paint pigment shall contain pigment yellow Colour Index Number 65 and/or 74 and/or 75. The white waterborne traffic paint pigment shall contain titanium dioxide in accordance with ASTM D 476. The non-volatile portion of the vehicle shall be composed of a 100% acrylic polymer.

The cured film of waterborne traffic paint shall not contain toxic heavy metals above the limits of the regulatory levels of 40 CFR 261.24 Table 1 when tested in accordance with EPA Toxicity Characteristics Leaching Procedure Test Method 1311 in Test Methods for Evaluating Solid Wastes, Physical/Chemical Methods, EPA publication SW-846. It shall not contain other hazardous materials which would require characterization as a hazardous waste for the disposal of the dried film.

No cracking or
flaking of film

490

Infrared spectrum of the vehicle
ASTM D 3168

Shall match spectrum
of manufacturer's
previously submitted
samples

Dilution test shall be capable of dilution with water at all levels without curdling or precipitation such that wet paint can be cleaned up with water only.

3. Formulation Approval

500 The manufacturer shall obtain approval of the waterborne traffic paint formulation prior to furnishing the paints. Only waterborne traffic paints from the Department's list of approved Coating Formulations shall be used. Waterborne traffic paint formulations will be placed and maintained on the Department's list of approved Coating Formulations in accordance with ITM 606.

909.06 Blank

909.07 Blank

510 **909.08 Blank**

909.09 Epoxy Penetrating Sealers

(a) Polysulfide Type

520 The material shall be a system composed of a mixture of equal parts by volume of components A and B. Component A shall be a solution of totally reactive epoxy resin, which may be cut back with a reactive diluent, such as cresyl glycidyl ether. Component B shall be a solution of the specified liquid polysulfide polymer and an amine curing agent compatible with the epoxy resin. The use of butyl glycidyl in either compound shall be prohibited.

Neither component shall contain a residual constituent which is unreactive with the epoxy resin. An amount of liquid polysulfide polymer sufficient to comply with the mercaptan content, total sulfur, and total sulfur/mercaptan ratio requirements given below shall be contained within the component B.

909.09

Non-volatile, or non-reactive extenders will not be permitted in either component. Each component shall have a usable shelf life of at least six months from the date of delivery.

530

The epoxy resin shall be manufactured from epichlorohydrin and bisphenol A, shall contain no more than trace amounts of hydrolyzable chlorine, and may contain sufficient reactive diluent, such as cresyl glycidyl ether, to conform to the specific requirements of 909.09(c).

(b) Unmodified Type

540 The material shall be a system composed of a mixture of equal parts by volume of components A and B. Component A shall be a solution of a totally reactive epoxy resin, and component B shall be a solution of an amine curing agent compatible with the epoxy resin. The use of butyl glydicyl ether in either component shall be prohibited.

Neither component shall contain a residual constituent which is unreactive with the epoxy resin. Non-volatile extenders will not be permitted in either component. Each component shall have a usable shelf life of at least six months from the date of delivery.

550 The epoxy resin shall be manufactured from epichlorohydrin and bisphenol A, shall contain no more than trace amounts of hydrolyzable chlorine, shall contain no reactive diluents, and shall be in accordance with 909.09(c).

(c) Specific Requirements

Specific requirements for each type of sealer shall be as shown in the table.

Property	Polysulfide Type	Unmodified Type	Test Method

(d) Low Temperature Epoxy Penetrating Sealer

A low temperature epoxy penetrating sealer shall consist of a system composed of a mixture of equal parts by volume of a totally reactive epoxy resin solution, and a solution of an amine curing agent. The epoxy materials shall be in accordance with 909.09(a) or 909.09(b). The material, when mixed in accordance with the manufacturer's recommendations, shall be capable of complete curing when applied to a concrete surface at a temperature of 35°F (2°C) or above, and with an ambient air temperature of 35°F (2°C) or above. The material shall be in accordance with 909.09(c), except the set-to-touch shall be determined at 20° ± 2°F (-7° ± 1°C) when applied to a tin coated steel panel at a mixture temperature of 77° ± 2°F (25° ± 1°C).

570

(e) Packaging and Marking

Each component shall be packaged in clean steel containers. Containers for component B shall be lined with a material inert to chemical reaction with the contents.

Each container shall be clearly marked with the product's identification, component designation (A or B), manufacturer's name, date of manufacture, formulation number, batch number, mixing directions, and such warning information as may be appropriate or required by law. A batch shall consist of a single charge of all ingredients in a mixing vessel and is not to be confused with the formulation number.

580

(f) Approval of Formulation

Prior to furnishing any material, the manufacturer shall obtain approval of formulation. Only epoxy penetrating sealers from the Department's list of approved

Coating Formulations shall be used. Epoxy penetrating sealers will be placed and maintained on the Department's list of approved Coating Formulations in accordance with ITM 606.

909.10 Proprietary PCC Sealers

Proprietary PCC sealers shall be selected from the Department's list of approved Other Concrete Sealers. A proprietary PCC sealer may be added to the approved list by completing the requirements in accordance with ITM 806, Approved List Procedure C.

(a) Properties

The proprietary PCC sealer shall be in accordance with NCHRP 244, Series IV, Southern Climate Weathering Test and possess the following properties.

<u>Property</u>	<u>Requirement</u>
Reduction of Chloride Ion Content	90% of the Control
Active Ingredients, Minimum	
Silane Based	20%
Siloxane Based	15%
Others	10%

(b) Test Report

The testing shall be performed by a recognized laboratory in accordance with ITM 806.

The proprietary PCC sealers shall be delivered to the jobsite in unopened containers with the manufacturer's numbered seal intact.

909.11 Epoxy-Resin-Base System for Bonding Plastic Concrete to Hardened Concrete

Two-component, epoxy-resin bonding systems for use in bonding freshly mixed concrete to hardened concrete shall be in accordance with ASTM C 881 for type II, grade 2, and the class consistent with the ambient temperature as follows. Class A for use below 40°F (4°C); class B for use between 40°F (4°C) and 60°F (16°C); and class C for use above 60°F (16°C). Material furnished under this specification shall be covered by a type C certification in accordance with 916.

SECTION 910 – METAL MATERIALS

910.01 Reinforcing Bars and Dowel Bars

(a) General

Unless otherwise specified, bars for concrete reinforcement shall be deformed billet steel, grade 60 (420). Tie bar assemblies used in lieu of bent tie bars shall be in

910.01

accordance with the minimum total ultimate strength and minimum total yield strength requirements specified for bent tie bars; bend test and elongation will not be
10 required.

Reinforcing steel used in precast or precast prestressed concrete structural members, including deck panels, shall be in accordance with ASTM A 615 grade 60 (A 615M, Grade 420).

Reinforcing bars shall be furnished by selecting bars made by a manufacturer on the list of Certified Uncoated Reinforcing Bar Manufacturers and in accordance with ITM 301. When shipped to the project site, the reinforcing bars shall be accompanied by the type of certifications specified in ITM 301 and in accordance with 916.
20

(b) Specific Requirements

1. Billet Steel Bars

Billet steel bars shall be in accordance with ASTM A 615 (A 615M).

2. Threaded Tie Bar Assembly

The threaded tie bar assembly shall be deformed billet steel, grade 60 (420), in accordance with 910.01(b)1 and a coupling device. The tie assembly shall achieve a minimum load of 76.144 kip/in.² (525 MPa). An epoxy coating with a minimum film
30 thickness of 6 mils (150 µm) shall be applied to the coupling device.

3. Splicing Systems

Reinforcing steel splicing systems shall be selected from the list of approved Reinforcing Steel Splicing Systems. A manufacturer may request to have a splicing system added to the list by submitting three randomly selected epoxy coated bars of each bar designation to be included as an approved splicing system on the list. The samples furnished shall be assembled. The splicing system will be tested for tensile strength in accordance with ASTM A 370 and shall reach 150% of the specified yield on all three samples for each bar size submitted. Splicing systems
40 demonstrating consistent, repeatable, and passing test results will be added to the list. Approved bar designations will be noted on the list.

4. Blank

5. Welded Steel Wire Fabric for Concrete Reinforcement

Welded smooth steel wire fabric for concrete reinforcement shall be in accordance with ASTM A 185, except as follows.

- 50
- a. The wire used in manufacturing the fabric shall be as drawn, not galvanized, unless otherwise specified.
 - b. The fabric shall be furnished in flat sheets unless otherwise permitted or specified.

- c. Weld shear tests of fabric will be performed on the test specimens obtained for testing tensile properties in accordance with the Frequency Manual. If there is weld shear failure, additional test specimens shall be obtained in accordance with ASTM A 185.

60

6. Welded Deformed Steel Wire Fabric for Concrete Reinforcement

Welded deformed steel wire fabric for concrete reinforcement shall be in accordance with ASTM A 497, except as follows.

- a. The wire used in manufacturing the fabric shall be in accordance with ASTM A 496.
- b. The fabric shall be furnished in flat sheets unless otherwise specified or permitted.
- c. Weld shear tests of fabric will be performed on the test specimens obtained for testing tensile properties in accordance with the Frequency Manual. If there is shear failure, additional test specimens shall be obtain in accordance with ASTM A 497.

70

7. Uncoated 7 Wire Strand for Prestressed Concrete

Uncoated 7 wire strand for prestressed concrete shall be in accordance with ASTM A 416. The strand shall have the minimum tensile strength of and initial tension shown on the plans.

80

Low relaxation strand with a nominal diameter of 1/2 in. (12.70 mm) and a cross sectional area of 0.167 in.² (108 mm²) shall have a breaking strength of 45,000 lb (20 400 kg).

Uncoated 7 wire strand shall be covered by the type of certification specified in the Frequency Manual and in accordance with 916.

8. Steel Spiral Reinforcement

90

Steel spiral reinforcement shall be either:

- a. deformed billet steel, ASTM A 615, grade 60 (A 615M, grade 420); or
- b. cold drawn steel wire, ASTM A 82.

9. Epoxy Coated Reinforcing Bars

Epoxy coated reinforcing bars shall be furnished by selecting bars coated from an applicator's plant on the list of Certified Reinforcing Bar Epoxy Coaters and in

910.01

- 100 accordance with ITM 301. The epoxy coating material shall be selected from the list of approved Epoxy Coating for Steel.

Epoxy coated reinforcing bars shall be in accordance with ASTM A 775 (A 775M), except as follows.

- a. the steel shall be in accordance with 910.01(b)1;
- b. the coating color shall contrast with the color of iron oxide;
- 110 c. tensile and bend tests shall be performed on the bars. If an examination of the bend test specimen suggests the need, the adhesion of the coating shall be checked by subjecting additional specimens to the 120° bend test. Hairline cracks without bond loss will be acceptable provided there are not more than two and the length of either crack does not exceed 1/4 in. (6 mm). The coating thickness shall be 8 to 13 mils (200 to 325 µm) after cure. The thickness measurements shall be made in accordance with ASTM G 12. The average shall be based on 12 individual readings. No specific correction for the base preparation process shall be applied to the thickness measurements.
- 120 d. epoxy coated reinforcing bars which will be jobsite sampled shall be accompanied by the types of certifications in the Frequency Manual and in accordance with 916. Epoxy coated reinforcing bars furnished by coaters on the list of approved Certified Reinforcing Bar Epoxy Coaters shall be accompanied by the types of certifications specified in ITM 301 and in accordance with 916.
- 130 e. repair and handling procedures shall be in accordance with 703.04. The coating material shall be in accordance with the Annex to ASTM D 3963 (D 3963M).

Epoxy coated support devices for epoxy coated reinforcing bars shall be in accordance with ASTM A 775 (A 775M), except as follows.

- a. the steel shall be in accordance with 910.01(b)1;
- 140 b. the coating color shall contrast with the color of iron oxide;
- c. the coating thickness shall be 6 to 20 mils (150 to 500 µm) after cure. The thickness measurements shall be made in accordance with ASTM G 12.

10. Dowel Bars

Dowel bars shall be plain billet steel in accordance with ASTM A 615, grade 40 (A 615M, grade 280), except the bend test and elongation requirements will not apply. The dowel bar area and weight (mass) for the nominal bar diameter shall be as follows.

Nominal Bar Diameter, in. (mm)	Cross Sectional Area, in. ² (mm ²)	Weight (Mass) lb/ft (kg/m)
1 (25)	0.79 (510)	2.670 (3.973)
1 1/4 (32)	1.23 (794)	4.172 (6.209)
1 5/16 (33)	1.35 (871)	4.600 (6.846)
1 1/2 (38)	1.77 (1142)	6.008 (8.941)

Dowel bars shall be coated with an epoxy coating material selected from the list of approved Epoxy Coating for Steel. The coating thickness after cure shall be a minimum of 7 mils (175µm). Dowel bars shall not have burring or other deformation restricting slippage in concrete. Dowel bar ends shall be saw cut. Chips from the cutting operation shall be removed from coated bars.

Dowel bars shall be furnished by selecting bars made by a coater and manufacturer on the list of approved Certified Reinforcing Bar Epoxy Coaters and in accordance with ITM 301. When shipped to the project site, the dowel bars shall be accompanied by the types of certifications specified in ITM 301 and in accordance with 916.

(c) Inspection, Sampling, and Testing

All reinforcing steel may be inspected, sampled, and tested after delivery to the project.

910.02 Structural Steel

(a) Structural Steel

Unless otherwise specified, structural steel shall be in accordance with A 709, grade 36 (A 709M, grade 250).

(b) High Strength Structural Steel

This steel, when specified, shall be in accordance with ASTM A 709, grade 100 (A 709M, grade 690); ASTM A 709, grade 50 (A 709M, grade 345); or ASTM A 709, grade 50W (A 709M, grade 345W).

The corrosion resistance of ASTM A 709, grade 50W (A 709M, grade 345W) steel shall be at least four times that of structural carbon steel. The steel fabricator, when placing the order, shall state that the steel is for bridge use, and that the steel shall be used in the bare, unpainted condition.

910.02

All fasteners used in conjunction with ASTM A 709, grade 50W (A 709M, grade 345W) steel shall be friction type high-strength steel bolts in accordance with ASTM A 325 (A 325M) type III. Certification and a sample shall be submitted to the Engineer prior to start of erection.

All plates and bars produced from ASTM A 572 (A 572M) steel over 3/4 in. (19 mm) in thickness shall be “killed fine grain practice”.

200

(c) High Performance Steel

High performance steel, HPS, shall be in accordance with ASTM A 709 (A 709M). In addition to the conditions listed in Section 6.7 of ASTM A 709 (A 709M), high performance steel may be furnished as hybrid/mixed design structural components using high performance steel plates in combination with high strength, low alloy steel plates and shapes, for welded or bolted applications in bridge construction.

The impact testing requirements for HPS in accordance with 10.1 and 10.2 of ASTM A 709 (A 709M) shall meet temperature zone 2.

210

(d) Charpy V-Notch Toughness Tests

Structural steel, except members exempted below, shall meet the longitudinal Charpy V-Notch test requirement as specified in the following table for the type or types of steel specified or furnished. Sampling and testing procedures shall be in accordance with ASTM A 673 (A 673M). The H frequency of heat testing shall be used. Charpy V-Notch test data shall be included on the mill test reports for structural steel specified in 711.08 and 916.

ASTM Designation	Thickness – in. (mm)	Foot-Pounds Joule (J) @ 40°F (4°C)
A 709 grade 36 (A 709M grade 250)		15 (20.3)
A 709 grade 50* (A 709M grade 345)*	Up to 4 in. (100 mm) mechanically fastened Up to 2 in. (50 mm) welded	15 (20.3) 15 (20.3)
A 709 grade 50W* (A 709M grade 345W)*	Up to 4 in. (100 mm) mechanically fastened Up to 2 in. (50 mm) welded Over 2 in. to 4 in. (50 to 100 mm) welded	15 (20.3) 15 (20.3) 20 (27.1)
* If the yield point of the material exceeds 65,000 psi (450 MPa), the temperature for the CVN value for acceptability shall be reduced by 15°F (-10°C) for each increment of 10,000 psi (69 MPa) above 65,000 psi (450 MPa).		

220

This test requirement shall apply to all structural steel members and/or components except diaphragms, cross frames, stiffeners, lateral bracing, railroad ballast retainers and components, shoe assemblies, expansion joints, and compression members of trusses.

(e) Mill Test Reports

Mill test reports for structural steel shall be in accordance with 711.08 and 916 and shall include Charpy-Impact test data as set out in 910.02(d).

(f) High Strength Bolts, Nuts, and Washers

230

1. General Use

High strength bolts shall be in accordance with ASTM A 325 (A 325M). Type 3 bolts will be required if the structural steel is to remain unpainted. High strength nuts shall be of the grade and finish specified in ASTM A 325 (A 325M) and in accordance with ASTM A 563 (A563M) or ASTM A 194 (A 194M). High strength washers shall be of the type specified in ASTM A 325 (A 325M) and in accordance with ASTM F 436. The bolts, washers, and nuts shall be coated after fabrication in accordance with ASTM A 153, class C or AASHTO M 298, class 55.

240

2. Assembly of Structural Steel in Bridges

High strength bolts, nuts, and washers used in the assembly of structural steel in bridges, excluding shoes and bearing assemblies, shall be provided in accordance with 910.02(f)1 and the following additional requirements.

a. Bolts

The maximum tensile strength shall be 150,000 psi (1034 MPa) for bolts 1 in. (25 mm) or less in diameter. The maximum tensile strength shall be 120,000 psi (827 MPa) for bolts greater than 1 in. (25 mm) in diameter. The maximum hardness shall be 33 Rc.

250

b. Nuts

The nuts shall be in accordance with ASTM A 563 (A 563M), grade DH; or ASTM A 194 (A 194M), grade 2H.

c. Tests**(1) Rotational Capacity**

High strength fasteners shall be subjected to the rotational capacity test in accordance with AASHTO M 169, Section 8.5. The fastener shall complete two times the required number of turns from snug tight conditions in accordance with AASHTO Standard Specifications for Highway Bridges, Division II, in a Skidmore-Wilhelm calibrator or equivalent tension measuring device without stripping or failure. During this test, the maximum recorded tension shall be at least 1.15 times the required fastener tension indicated in AASHTO Standard Specifications for Highway Bridges, Division II. The measured torque required to produce the required fastener tension shall not exceed the value obtained by the following equation.

$$\text{Torque} = 0.25 \text{ PD}$$

270 Where:

Torque = Measured Torque, (foot-pounds) (newton meters)
 P = Measured Bolt Tension, (pounds) (newtons)
 D = Nominal Diameter (feet) (meters)

(2) Proof Loads

Proof load tests for bolts shall be conducted in accordance with ASTM F 606, Section 3.2.3. Proof load test for nuts shall be conducted in accordance with ASTM F 606, Section 4.2.

280

(3) Wedge Tension Test

The wedge tests of full size bolts shall be conducted in accordance with ASTM F 606, Section 3.5.

d. Certification

The supplier shall provide a certification of compliance with all requirements for high strength bolts, nuts, and washers used in the assembly of structural steel in bridges, excluding shoes and bearing assemblies. The certification, in addition to complying with the applicable requirements of 916, shall include the lot number on the shipping package and indicate when or where all testing was performed.

290

(g) Bolts other than High Strength Bolts

1. General

Bolts shall be unfinished, turned, or ribbed bolts conforming to the requirements for Grade A bolts of specification for low carbon steel externally and internally threaded fasteners, ASTM A 307. Bolts shall have single, self-locking nuts or double nuts unless otherwise shown on the plans or in the special provisions. Beveled washers shall be used where bearing faces have a slope of more than 1:20 with respect to a plane normal to the bolt axis.

300

Bolts, washers, and nuts utilized in the U channel steel post splice as shown on the plans shall be in accordance with ASTM A 449, SAE J429-G7.9, or ASTM A 325 (A 325M) and shall be galvanized.

2. Unfinished Bolts

Unfinished bolts shall be furnished unless other types are specified.

3. Turned Bolts

The surface of the body of turned bolts shall meet the ANSI roughness rating value of 125. Heads and nuts shall be hexagonal and standard dimensions for bolts of the nominal size specified or the next larger nominal size. Diameter of threads shall be equal to the body of the bolt or the nominal diameter of the bolt specified. Holes

310

for turned bolts shall be carefully reamed. Bolts furnished shall provide for a light driving fit. Threads shall be entirely outside of the holes. A washer shall be provided under the nut.

4. Ribbed Bolts

- 320 The body of ribbed bolts shall be of an approved form with continuous longitudinal ribs. The diameter of the body measured on a circle through the points of the ribs shall be 5/64 in. (2 mm) greater than the nominal diameter specified for the bolts. Ribbed bolts shall be furnished with round heads conforming to requirements of ANSI B 18.5 unless otherwise specified. Nuts shall be hexagonal, either recessed or with a washer of suitable thickness. Ribbed bolts shall make a driving fit with the holes. The hardness of the ribs shall be such that the ribs do not mash down enough to permit the bolts to turn in the holes during tightening. If for any reason the bolt twists before drawing tight, the hole shall be carefully reamed and an over sized bolt used as a replacement.

910.03 Permanent Metal Forms

330 Metal bridge deck forms and supports shall be fabricated from steel in accordance with ASTM A 653 (A 653M) for grades A through E having a coating class of G165.

- 340 Material furnished under this specification shall be covered by the type of certification specified in the Frequency Manual and in accordance with 916. The certification shall list the yield tensile stresses, the ultimate tensile stresses, the ultimate tensile elongations, the base metal thicknesses, the weights (masses) of the galvanized coating, and shall certify that the material complies with the specified material requirements. The properties and parameters shall be listed for each gage (thickness) of material used in the panels and the hardware necessary to erect them. The materials will be sampled at the work site and shall include a representative portion of a panel of each gage (thickness) to be used and a representative portion of each type and size of hardware necessary to erect the panels, excluding the fasteners.

910.04 Steel Forgings and Steel Shafting

(a) Carbon Steel Forgings

- 350 Steel forgings shall be in accordance with ASTM A 668 for carbon steel forgings for general industrial use. Class F forgings shall be furnished unless otherwise specified.

(b) Cold Finished Carbon Steel Shafting

Shafting shall be in accordance with ASTM A 108 for cold finished carbon steel bars and shafting. Grade designation 1016-1030, inclusive, shall be furnished unless otherwise specified.

910.05

(c) Alloy Steel Forgings

360 Alloy steel forgings shall be in accordance with ASTM A 668 for alloy steel forgings for general industrial use. Class G forgings shall be furnished unless otherwise specified.

(d) Certification

Steel forgings and steel shafting shall be covered by a mill certification reporting the test results of:

1. chemical analysis;
2. heat treatment, not required for shafting;
- 370 3. tensile strength, yield strength, and elongation.

Elongation is not required for shafting.

910.05 Castings

380 The casting design shall be proof loaded to 40,000 (178 kN) in accordance with Federal Specification FF-F-621. Castings shall be in accordance with the plan dimensions and to the following requirements for the designated materials. A certified inspection report shall be submitted by the manufacturer with each shipment of castings, except as otherwise provided herein. Inspection and testing shall be done by the manufacturer. The certified inspection report shall list the casting date, casting number, and the type of material, such as gray iron, ductile iron, etc. It shall state that inspection and testing has been preformed, that all parts shipped meet the pertinent specification requirements, and that all component parts fit. The supporting test results, including proof load data, shall be retained and be available on request for a period of seven years. All castings shall have the manufacturer's identification and the date of manufacture cast on an exposed surface. Acceptance of castings will be based on the certified inspection report, visual inspection, and check measurements.

390 **(a) Steel Castings**

Chromium alloy steel castings shall be in accordance with ASTM A 743 (A 743M). Grade CA 15 shall be furnished unless otherwise specified.

(b) Iron Castings

Iron casting shall be gray iron castings in accordance with ASTM A 48, class No. 35B, unless otherwise specified. Tension tests will be required for all castings including drainage castings.

400 Castings shall be true to pattern in form and dimensions. A tolerance of $\pm 1/8$ in. (± 3 mm) in general dimensions as shown on the plans will be permitted with the exception that the tolerance in the dimensions of grates or covers and the openings into which they fit shall be limited to $\pm 1/16$ in. (2 mm). All castings shall weigh at least 95% of the specified weight (mass) of that type cast to the exact dimensions

shown on the plans. They shall be free from sponginess, cracks, blowholes, warping, sand inclusions, cold shots, cold shuts, chilled iron shrinks, or any defects which would affect the strength and value for the intended purpose. The castings shall completely fill the molds and shall not be removed until properly cooled. The casting date and a casting code number shall be cast on each casting.

- 410 All corners of the castings shall be filleted and outside corners and edges shall be rounded to a radius of not less than 1/8 in. (3 mm). All contact surfaces between different castings shall present a firm and even bearing without rattling or rocking. The lid frame bearing surfaces on all round castings shall be machine milled to provide true bearings around the entire circumference. All other contact surfaces shall be ground.

All castings shall be cleaned of molding or core sand, rust, scale, and foreign material just prior to shipment. Iron castings shall be delivered unpainted.

420 **(c) Ductile Iron Castings**

These castings shall be in accordance with ASTM A 536. Grade 65-45-12 shall be furnished unless otherwise specified. In addition, they shall be in accordance with all requirements of 910.05(b), except the first paragraph.

(d) Malleable Castings

These castings shall be in accordance with ASTM A 47 (A 47M). Grade No. 32510 or 35018 shall be furnished unless otherwise specified. In addition, they shall be in accordance with all requirements of 910.05(b), except the first paragraph.

430 **(e) Carbon Steel Castings**

These castings shall be in accordance with ASTM A 27 (A 27M). The grade shall be 60-30, 65-35, or 70-36.

Castings shall be true to pattern in form and dimensions and free from pouring faults, sponginess, cracks, blowholes, and any defects in positions affecting their strength and value for the service intended.

- 440 Blowholes appearing on finished castings shall be located so that a straight line laid in any direction does not cut a total length of cavity greater than 1 in. (25 mm) in any 1 ft (0.3 m) nor shall any single hole exceed 1 in. (25 mm) in any dimension or have an area greater than 1/2 in.² (323 mm²). Blowholes shall not be deep enough to affect the strength of the casting adversely.

Minor defects which do not impair strength may, with approval, be welded by an approved process. Defects shall be removed in solid metal by chipping, drilling, or other satisfactory methods and, after welding, the castings shall be annealed if required. Castings which have been welded without permission will be rejected. No sharp unfilleted angles or corners will be allowed.

910.06

450 **910.06 Bronze and Copper Alloy**

(a) Bronze Castings

 Bronze castings shall be in accordance with ASTM B 22, alloys 911 or 913. Material furnished under this specification shall be covered by a type A certification in accordance with 916.

(b) Copper Alloy Plates

460 Copper alloy plates shall be in accordance with ASTM B 100. Material furnished under this specification shall be covered by a type A certification in accordance with 916.

910.07 Steel Drain Pipe

 Steel drain pipe may be welded or seamless, black or galvanized, and shall be in accordance with ASTM A 53 except as follows:

Chemical	Furnace Butt Welded	Seamless or Electric Resistance Welded
Carbon, % Max.	0.20	0.20
Manganese, % Max.	1.00	1.06
Phosphorous, % Max.	0.08	0.05
Sulphur, % Max.	0.05	0.05
Copper, %	0.75-1.25	0.75-1.25
Nickel, %	1.60-2.20	1.60-2.20
Tensile Strength, min. psi (MPa)	55,000 (379)	65,000 (448)
Yield Point, Min., psi (MPa)	40,000 (276)	46,000 (317)

470 The minimum elongation for furnace butt welded pipe shall be 30% in 2 in. (50 mm) for seamless pipe, in accordance with ASTM A 53, grade A, and for electric resistance welded pipe, in accordance with ASTM A 53, grade B. Material furnished under this specification shall be covered by a type C certification in accordance with 916.

910.08 Blank

910.09 Guardrail

 Guardrail of the same type shall be interchangeable regardless of the source. Guardrail shall be supplied by a Certified Guardrail Supplier selected from the Department's list of Approved Certified Guardrail Suppliers.

480 Steel beam rail shall be galvanized, corrugated sheet steel beams in accordance with AASHTO M 180 as modified herein. The rails, including terminal sections, shall be either class A, base metal nominal thickness of 0.105 in. (2.67 mm), 12 gage, or class B, base metal nominal thickness or 0.135 in. (3.43 mm), 10 gage. They

shall be type 2, zinc coated with 3.60 oz/sq ft (1.1 kg/m²) minimum single spot and 4.00 oz/sq ft (1.22 kg/m²) minimum triple spot. Tests for adherence of the coating may be made including the test specified in ASTM A 123, when deemed necessary.

490 Where beam rail is set on a curve of 150 ft (45.7 m) radius or less, the rail plate shall be shop curved with its traffic face concave or convex as required. The radii of curvature shall be in increments of 10 ft (3 m) from a radius of 150 to 50 ft (45.7 to 15.2 m) inclusive and in increments of 5 ft (1.5 m) from a radius of 50 ft (15.2 m) to and including 20 ft (6.1 m).

The steel channels specified on the plans shall be standard 5 in. (127 mm) channels weighing 6.7 lb/ft (10.0 kg/m). The material shall be in accordance with ASTM A 36 (A 36M). The channel shall be galvanized in accordance with ASTM A 123 after fabrication. The weight (mass) of zinc coating per area of actual surface shall average not less than 2.0 oz/ft² (0.61 kg/m²) for any individual piece of channel.

500 Construction details for the rails and channels shall be as shown on the plans. Whenever field fabrication, as approved, requires cutting or drilling, the cut or drilled member shall be coated with a high zinc dust-zinc oxide paint in accordance with Federal Specification TT-P-641, type II, or Military Specifications DOD-P-21035. When spray paints are used, two coats shall be applied.

910.10 Guardrail Posts

Guardrail posts shall be either steel or wood as specified and shall be in accordance with the following requirements.

510 (a) Steel Guardrail Posts

The dimensions of the steel guardrail posts shall be as shown on the plans. The material shall be in accordance with ASTM A 36 (A 36M). The posts shall be galvanized in accordance with ASTM A 123 after fabrication. However, the weight (mass) of zinc coating per square foot (square meter) of actual surface shall not average less than 2.0 oz (610 g) for an individual post.

The weight (mass) of the W6 x 15 post, after fabrication and coating, shall not be less than 14.60 nor more than 16.00 lb/ft (21.73 nor more than 23.81 kg/m).

520 Construction details shall be as shown on the plans. Whenever field fabrication, as approved, requires cutting or drilling, the cut or drilled member shall be coated with a high zinc dust-zinc oxide paint conforming to the requirements of Federal Specification TT-P-641, or Military Specifications DOD-P-21035. When spray paints are used, two coats shall be applied.

(b) Wood Guardrail Posts

The wood guardrail posts shall be in accordance with 911.02(d). Dimensions and construction details shall be as shown on the plans.

530 **910.11 Guardrail Accessories, Fittings, and Hardware**

These items consist of brackets, splice plates and bars, post anchors, diaphragms, clamps and clamp bars, end caps, connections, anchor rod assemblies, deadmen, bolts, screws, nuts, and washers of the type, dimensions, and design shown on the plans. They shall be in accordance with the requirements set out below. Items of the same type shall be interchangeable regardless of the source.

(a) For Steel Beam Guardrail

- 540 1. Post brackets, bars, plates and shapes for bridge railing brackets, and plate washers shall be in accordance with ASTM A 36 (A 36M). Post brackets, bars, and plates and shapes for bridge railing brackets shall be galvanized in accordance with 910.10(a). Plate washers shall be galvanized after fabrication in accordance with ASTM A 153. The weight (mass) of the W6 x 15 post bracket shall be in accordance with 910.10.
2. Splice plates and rail portion of bridge railing brackets shall be class B, type 2, in accordance with the first paragraph of 910.09(a).
- 550 3. Bolts and nuts of the sizes specified on the plans shall be in accordance with ASTM A 307. Cut washers and lock washers shall be standard round steel washers of the sizes specified on the plans. The diameter of cut washers shall be 1 3/4 in. (44 mm) for 5/8 in. (16 mm) bolts and 2 in. (50 mm) for 3/4 in. (19 mm) bolts with a thickness of 0.134 in. (3.4 mm) \pm 0.026 in. (0.66 mm) measured at the hole. The bolts, washers, and nuts shall be coated after fabrication in accordance with ASTM A 153, or be mechanically galvanized and conform to the coating thickness, adherence, and quality requirements for class C of ASTM A 153.
- 560 4. Whenever approved field fabrication requires cutting or drilling, the cut or drilled members shall be coated with a high zinc dust-zinc oxide paint conforming to Federal Specification TT-P-641, type II, or Military Specifications DOD-P21035. When spray paints are used, two coats shall be applied.
- 570 5. Pipe spacers of the size specified on the plans shall be galvanized after fabrication in accordance with ASTM A 153, class C. The weight (mass) of coating per square foot (square meter) of actual surface shall average no less than 1.25 oz (381 g) for the specimen tested and shall be no less than 1.00 oz (305 g) for any individual specimen.

6. For breakaway cable terminal, and cable terminal anchor system, the rail element, standard bolts, nuts, and washers shall be in accordance with 910.09 and requirements 1 and 3 of 910.11(a).
7. For cable terminal anchor system, the anchor bracket, end plate, soil plate, bearing plate, strut and yoke shall be in accordance with AASHTO M 270 grade 250. They shall be zinc coated after fabrication in accordance with AASHTO M 111. The steel tube shall be in accordance with ASTM D 500 grade B and zinc coated in accordance with AASHTO M 111. The post sleeve shall be in accordance with ASTM A 53 grade B and zinc coated in accordance with AASHTO M 111. The stud shall be in accordance with ASTM F 568 class 8.8, and zinc coated in accordance with AASHTO M 111. The threads shall be in accordance with ANSI B1.13M and shall be M24 x 3 class 6g pitch. The swaged fitting shall be in accordance with ASTM A 576 grade 1035, zinc coated in accordance with AASHTO M 111, and shall be annealed for cold swaging. A lock pin hole to accommodate a 1/4 in. (6 mm) plated spring-steel pin shall be drilled through the head of the swaged fitting.

High strength bolts shall be in accordance with ASTM A 325 (A 325M) or ASTM A 449. High strength nuts shall be in accordance with ASTM A 563 (A 563M), Grade B or better. Galvanizing shall be in accordance with ASTM A 153 or mechanically galvanized and conform to the coating thickness, adherence, and quality requirements for class C of ASTM A 153. Foundation plates and bearing plates shall be in accordance with ASTM A 36 (A 36M), and shall be galvanized after fabrication in accordance with ASTM A 123, except the weight (mass) of zinc coating per square foot (square meter) of actual surface shall average no less than 2.0 oz (610 g) and shall be no less than 1.8 oz (549 g) for any individual specimen. Welding shall be in accordance with AWS D1.1.

Terminal posts shall be fabricated from tubing meeting ASTM A 500, Grade B, or ASTM A 501 and from plates meeting ASTM A 36 (A 36M). Welding shall be in accordance with AWS D1.1. They shall be galvanized after fabrication in accordance with ASTM A 123, except the weight (mass) of zinc coating per square yard (square meter) of actual surface shall average no less than 2.0 oz (610 g). The average for any component part, including paddle plate, tubing, or base plate, shall be no less than 1.8 oz (549 g).

The steel pipe in the type 5 anchor and the steel spacer tube in the transition type WGB shall be Schedule 40.

Tapered washers may be of steel or malleable iron, and galvanized in accordance with ASTM A 153.

620 The wire rope used in the cable assemblies shall be in accordance with AASHTO M 30 and shall be 3/4 in. (19 mm) preformed, 6 by 19, wire strand core or independent wire rope core (IWRC), galvanized, right regular lay, manufactured of improved plow steel, with a minimum specified breaking strength of 42,800 lbf (190 kN). The swaged fitting, stud, and nut shall develop the breaking strength of the wire rope. The fitting shall be galvanized in accordance with ASTM A 123 before swaging. After galvanizing, the head and nut may be tapped 0.023 in. (0.6 mm) over the ANSI B1.1, class 2B tolerance.

(b) For Steel Tube Guardrail

630

1. Channels and bars for connections, splice bars, and diaphragms shall be in accordance with ASTM A 36 (A 36M).
2. Cap screws shall be stainless steel in accordance with ASTM A 276, type 304 or 430.
3. Rail end caps shall be malleable iron castings in accordance with ASTM A 47 (A 47M), grade 35018, or steel castings in accordance with ASTM A 27 (A 27M), grade 70-36.

640

4. Cut washers and lock washers shall be standard round steel washers. The diameter of cut washers shall be 1 1/2 in. (37.5 mm) and 1/8 in. (3.2 mm) thick measured at the hole. Washers shall be coated after fabrication in accordance with requirement 3 of 909.11(a).
5. All materials other than cap screws and washers shall be galvanized after fabrication in accordance with ASTM A 123.

650

6. When field fabrication, as approved, requires cutting or drilling, the cut or drilled members shall be coated with a high zinc dust-zinc oxide paint conforming to the requirements of Federal Specification TT-P-641 type II or Military Specifications DOD-P-21035. When spray paint is used, two coats shall be applied.

910.12 Certification of Guardrail Suppliers

Suppliers desiring to be on certification status will be approved upon request and added to the Department's list of approved Certified Guardrail Suppliers. The written request shall be submitted to the Materials and Tests Division. An approval number
660 will be assigned to each supplier to be used for identification acceptable of material.

The supplier shall perform testing or shall obtain documentation to ensure the quality of the material incorporated into the work.

The supplier shall prepare each month a type D certification in accordance with 916.02(e). Such certification shall contain the contract number; supplier's name; supplier's approval number; month of installation; rail manufacturer; bolt manufacturer; quantities of rail, channel, posts, block, and paddle posts incorporated into the work; quantities of sawed timber posts and blocks for thrie-beam and
 670 W-beam guardrail incorporated into the work; and a statement that the materials furnished are in accordance with 910.09 through 910.12.

The Department will inspect the steel beam guardrail on a randomly selected contract for compliance with specifications for a minimum of one time per year per supplier.

Selected contracts with failing results will be adjudicated as a failed material in accordance with normal Department practice.

680 If the supplier shows negligence or the inability to ensure the delivery of specified materials, the supplier may be removed from the approved list.

910.13 Steel Fence Posts

Tubular steel fence posts and line posts shall meet the following specifications and the requirements as shown on the plans.

(a) Line Posts

Line posts shall be in accordance with AASHTO M 281 and galvanized in accordance with AASHTO M 111, Coating grade 65.
 690

Line posts for farm field fence shall be furnished with anchor plates. End, corner, pull, and gate posts for farm field type fence shall be furnished with braces and all fittings and details required to make a complete installation as shown on the plans.

(b) Tubular Steel Fence Posts

Two groups of tubular steel fence posts are included in these specifications. Tubular section posts shall have heavy malleable iron caps or pressed galvanized steel caps. Such caps shall be made to provide a drive fit over the outside of the
 700 section to exclude moisture. The weight (mass) per foot (meter) for tubular posts and braces shall be no less than 90% of the weight (mass) specified. Unless specified otherwise, the tubular steel fence post shall be group 1.

1. Group 1

Tubular steel fence posts for group 1 shall be hot-dipped zinc-coated and shall be in accordance with ASTM F 1083 except tests shall be conducted on sample posts selected as being representative of the posts furnished. The weight (mass) per foot (meter) will be acceptable provided it is at least 90% of the specified weight (mass).

710

2. Group 2

Tubular steel fence posts for group 2 shall have a minimum 50 ksi (345 MPa) yield strength and be in accordance with AASHTO M 181, except that the inner pipe surface may be galvanized in lieu of a zinc rich coating or hot dipped aluminum coated, Type 2, meeting the chemical requirements of AASHTO M 274. The aluminum coated, Type 2, steel fence posts shall be manufactured by roll forming aluminum coated, Type 2, steel strip and electric resistance welding it into tubular form. The outside of the weld area shall be metallized with commercially pure aluminum to a thickness sufficient to provide resistance to corrosion equal to that of the remainder of the outside of the post. The aluminum coating weight (mass) shall be a minimum of 0.75 oz/sq ft (229 g/m²) average, and 0.70 oz/sq ft (214 g/m²) for an individual test specimen, as measured in accordance with ASTM A 428. Specimens for determining weight of coating shall be obtained in accordance with ASTM F 1083.

720

(c) Fence Fastenings

When fastenings are necessary for attaching the farm field fence to the posts, they shall be either galvanized or aluminum coated No. 9 (3.8 mm) wire, or galvanized or aluminum coated clamps of the manufacturer's standard design. The coating weights shall be a minimum of 0.60 oz/sq ft and 0.30 oz/sq ft (183 g/m² and 92 g/m²) for galvanized and aluminum coated, respectively. A sufficient quantity of individual tie wires or clamps shall be furnished to provide for five attachments of the fencing to each line post and one tie wire for each strand of barbed or tension wire.

730

Line posts for chain link type fence shall be furnished with the necessary tie wires or fabric bands for fastening the fabric to the posts. These fastenings shall be made of aluminum strip or wire of approved gage and design or of galvanized steel wire and may be in accordance with the manufacturer's standard design. If galvanized steel wire ties are furnished, the wire shall be no smaller than No. 9 gage (3.8 mm). A sufficient quantity of individual ties or bands shall be furnished to provide for attaching the fabric to each line post each 1 ft (0.3 m) or as called for on the plans.

740

910.14 Sign Posts**(a) Steel, Flanged, Channel Posts****1. General Requirements**

Posts shall be made from open hearth, basic oxygen, or electric furnace steel rolled from standard tee rails or new billets. The steel used in the posts shall conform to the physical properties of ASTM A 499, grade 60, and to the chemical compositions of ASTM A 1 for 91 lb/yd (45 kg/m) or larger steel rails.

750

Posts fabricated from other steels will be acceptable providing that the following criteria are met. A notarized copy of a dynamic crash test report shall be furnished

substantiating that the posts manufactured from this material, when double mounted in a 7 ft (2.1 m) span, conform to the breakaway requirements of AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals, except that the maximum change in velocity shall not exceed 16 ft/s (4.9 m/s). For two posts in a 7 ft (2.1 m) path, impact performance may be estimated by multiplying the vehicle energy loss observed in a single post crash test by 2. This estimated double post energy loss may then be used to calculate an estimated impact velocity change and momentum change for a double post sign design. The minimum yield strength shall be 60,000 psi (414 MPa) and the minimum tensile strength shall be 90,000 psi (621 MPa).

The tensile strength shall be determined by either the standard Rockwell Hardness test, Brinell Hardness test, or by actual tensile test. The Rockwell Hardness shall be a minimum of B 91. The yield strength shall be determined by the manufacturer by actual test. Tensile and yield strengths and chemical composition shall be determined by the average from the three latest test results the manufacturer has available at the time of shipment. These test results need not be made on the materials from which the posts were made. However, the tests must have been made within 90 days of shipment. Posts, except those used for temporary construction signs, temporary traffic signs, and temporary panel signs, shall be certified by a type B certification in accordance with 916. The certification shall include the above three test results and the elastic section modulus value in accordance with 910.14(a)3.

Posts shall be of uniform flanged channel or U section such that the area of contact between the post and the sign is symmetrical about the vertical axis of both sign and post. The back of each post shall be formed in a manner to ensure a solid bearing surface over the entire length of the post when mounted back to back. The bearing surface on the back of the post shall be flat. The length shall be as specified with a tolerance of ± 1 in. (± 25 mm). Sign posts shall be punched with 58 holes which shall be 3/8 in. (9.5 mm) in diameter located on the center-line and spaced on 1 in. (25 mm) centers beginning 1 in. (25 mm) from the top. The remainder of the post shall be punched with 3/8 in. (9.5 mm) holes on 1 in. (25 mm) or 2 in. (50 mm) centers.

The finished posts shall be machine straightened and have a smooth uniform finish free from cracks, flaws, injurious seams, laps, blisters, and edges which are ragged, sharp, and imperfect, or other defects affecting their strength, durability, or appearance. The maximum variation in straightness shall be no more than 1/4 in. (6 mm) in any 5 ft (1.5 m) of length, or exceed in inches (millimeters) 1/4 times the number of feet (meter) of length divided by five. Bolt holes of the diameter specified shall be accurately spaced vertically and centered horizontally so that holes will register for back to back application. All holes and sheared ends shall be commercially free from burrs.

The steel sign posts shall be galvanized in accordance with ASTM A 123.

Galvanizing shall be the final process after all fabrication and punching has been completed. Posts saw cut after galvanizing shall have the cut surface treated with a zinc-based solder in rod form which complies with ASTM A 780. The cut surface shall not be treated until the fuse plate is installed and all bolts are tightened. The top of the fuse plate shall be 1 in. (25 mm) below the bottom of the sign.

810 Posts saw cut before galvanizing shall have temporary fasteners provided with sufficient strength to prevent warping or deforming of the post during the galvanization process. The surface under the temporary fasteners shall be treated with an approved zinc solder meeting the above mentioned specifications. The surface shall be treated before the fuse plate is installed. The break-away stubs shall be galvanized a minimum of 8 in. (200 mm) below the top of the concrete foundation.

820 Steel posts shall be wired or strapped securely in bundles of not more than 2,000 lb (907 kg). They shall be nested in rows with the edges intermeshed so as to form a rectangular bundle and shall be fastened in such a manner that they do not slip or rub against each other and cause damage to the finish. Care shall be taken during shipment to prevent the bundles from rubbing against each other and causing damage. Excessive damage to the finish during shipment will be cause for rejection of the damaged posts.

2. Deflection Test Requirements

830 Posts will be tested as a simple beam with the flange in compression on non-restricting supports 24 in. (610 mm) apart. Test specimens shall be 28 in. \pm 1/4 in. (711 mm \pm 6.3 mm) long. A load of 1,500, 3,500, or 4,600 lb (6672, 15569, or 20462 N), depending on the type of post, shall be applied at the center of the span with a mandrel of not less than 1 in. (25 in.) in diameter. Application of the load shall be at a speed of not to exceed 0.03 in. (8 mm) per min. Deflection of the post upon application of the total load shall not exceed 0.16 in. (4 mm). The load shall then be removed. Deflection of the post one minute after removal of the load shall not exceed 0.01 in. (0.25 mm).

3. Type of Posts

Posts shall conform to the following table and to deflection tests required in 910.14(a)2.

Type	Minimum Elastic Section Modulus	Loading
A	.200	1,500 lb (6672 N)
B	.400	3,500 lb (15569 N)
C	.560	4,600 lb (20462 N)
Abb*	.670	**
Bbb*	1.190	**
* Back to Back ** Back to Back post shall be tested singly for deflection prior to assembly. Note: The elastic section modulus values shall be included in the type B certification.		

840 (b) Wide Flange Posts

Structural steel members for the support of signs shall be in accordance with AASHTO M 183 and ASTM A 709 grade 36 (A 709M grade 250). These members shall be galvanized in accordance with ASTM A 123. Base plates and stiffeners shall be in accordance with the requirements of ASTM A 709 grade 36 (A709M grade 250). Fuse plates shall be in accordance with the requirements of ASTM A 36 (A 36M) and shall be galvanized in accordance with ASTM A 123. All bolts, nuts, and washers shall be high strength and be in accordance with AASHTO M 164 and ASTM A 325.

850 All holes shall be drilled. All cutting shall preferably be saw cuts however flame cuts as specified in 711.13 may be allowed. Metal projecting beyond the plane of the plate face will not be allowed.

(c) Structural Steel Posts

Steel members for the support of signs shall be standard shapes as specified and shall be in accordance with 910.02(a). These members shall be galvanized in accordance with ASTM A 123. Material furnished under this specification, except those used for temporary construction signs, temporary traffic signs, and temporary panel signs, shall be covered by a type C certification in accordance with 916.

860

(d) Structural Aluminum Posts

These posts shall be standard shapes as specified and shall be aluminum in accordance with ASTM B 221 (B 221M) alloy 6061-T6. Material furnished under this specification, except those used for temporary construction signs, temporary traffic signs, and temporary panel signs, shall be covered by a type C certification in accordance with 916.

(e) Square Steel Posts

870 Square steel sign post, except those used for temporary construction signs, temporary traffic signs, and temporary panel signs, shall be covered by the type of certification specified in the Frequency Manual and in accordance with 916.

1. Steel

Square steel posts shall be roll formed and in accordance with one of the following:

- 880 a. ASTM A 570, hot rolled carbon sheet steel in either 0.105 in. (2.66 mm) or 0.075 in. (1.90 mm) with a minimum yield strength of 60,000 psi (414 MPa). The ultimate tensile strength shall not exceed 79,800 psi (550 MPa) or have an elongation measured over 2 in. (50 mm) greater than 20%.
- b. ASTM A 1008 or 1011, cold rolled high strength steel, 0.075 in. (1.90 mm) with a minimum yield strength of 60,000 psi (414 MPa). This shall apply to the 2 in. x 2 in. (50 mm x 50 mm) size posts only.
- 890 c. ASTM A 653, cold rolled high strength steel, 0.75 in. (1.90 mm) with minimum yield strength of 60,000 psi (414 MPa). The ultimate tensile strength shall not exceed 79,800 psi (550 MPa) or have an elongation measured over 2 in. (50 mm) greater than 20%. This requirement shall apply to the 2 in. x 2 in. (50 mm x 50 mm) size posts only.

Yield strengths and chemical composition shall be determined from the three latest test results performed by the steel manufacturer. These test results may not be determined on materials from which the delivered posts were made. However, the tests shall have been performed within 90 days of shipment. The certification shall include the range of test results and the section modulus value in accordance with 910.14(a)3.

2. Fabrication

The posts shall be corner welded and scarfed as necessary to allow sections to telescope within each other. The finished posts shall be machine straightened and have a smooth uniform finish free from cracks, flaws, injurious seams, laps, blisters, and edges which are ragged, sharp, and imperfect, or other defects affecting their strength, durability, or appearance. The maximum variation in straightness shall be no more than 1/4 in. (6.3 mm) in any 5 ft (1.52 m) of length. Cut holes or knockout holes of 7/16 in. (11 mm) diameter shall be spaced on 1 in. (25 mm) centers, on the centerlines of all four sides in true alignment, and opposite to each other for back to back applications. All holes and sheared ends shall be free from burrs.

3. Protective Coating

The protective coating shall be applied using one of the following:

- a. Before fabrication, both sides of the rolled sheet steel shall be galvanized in accordance with ASTM A 653, coating designation G 90. (A 653M, coating designation Z 275)

- 920 b. After fabrication, a triple coating system on the outside of the posts consisting of galvanizing with zinc which is in accordance with AASHTO M 120 weighing $0.60 \pm 0.15 \text{ oz/ft}^2$ ($183 \pm 46 \text{ g/m}^2$) followed by a chromatic conversion coating weighing 15 ± 5 micrograms, $\mu\text{g/in.}^2$ ($0.02 \pm 0.006 \text{ g/m}^2$) and a clear organic exterior coating with a dry film thickness of 0.2 ± 0.1 mil ($5 \pm 2.5 \mu\text{m}$). The interior surface of the posts shall receive a double in-line application of a zinc rich organic coating with a total dry film thickness of 1.2 ± 0.6 mil ($30 \pm 15 \mu\text{m}$). The dried zinc rich organic coating film shall contain a minimum of 77% total zinc. Samples from the posts which use these protective coatings shall be exposed to salt fog testing in accordance with ASTM B 117 for a total of 500 h. The samples shall be examined at both 100 and 500 h of salt fog testing and rated for corrosion. At 100 h the corrosion rating shall be a minimum of 9 and at 500 h the corrosion rating shall be a minimum of 6 when determined in accordance with ASTM D 1654.
- 930

(f) Portable Construction Sign Trailer

- 940 The portable construction sign trailer, not including the signs and lights, shall weigh no more than 300 lb (140 kg) and shall not be fabricated with heavier than 3 x 3 in. (75 x 75 mm) angles, 2 1/2 in. (63 mm) pipe, or 3 x 2 in. (75 mm x 50 mm) rectangular tubing. The rim size of the wheels shall not exceed 12 in. (300 mm). Axle assemblies with differential housings shall not be used.

910.15 Delineator Posts

Posts shall be in accordance with 910.14(a)1.

Physical requirements for the finished delineator posts shall be:

- 950 Width of flange face 2 to 2 3/8 in. (50 to 60 mm)
 Width of back 3/4 to 7/8 in. (19 to 22 mm)
 Depth from face of flange to back 7/8 to 1 1/8 in. (22 to 29 mm)
 Length 7.0 ft \pm 1 in. (2.1 m \pm 25 mm)
 Weight (Mass) 1.0 to 1.5 lb/ft (1.5 to 2.2 kg/m)

Delineator posts shall be punched with a minimum of twenty-four 1/4 in. (6 mm) holes on the centerline spaced on 1 in. (25 mm) centers beginning 1 in. (25 mm) from the top.

960

910.16 Copper Flashing

Copper flashing shall be soft copper and shall be in accordance with ASTM B 370, except the minimum copper content shall be 99.5%. The weight (mass) per square foot (square meter) will be determined by weighing individual samples. If the

910.17

first sample is not in accordance with the tolerances for 16 oz (450 g) sheet, two additional samples shall be tested and both shall comply with the specified tolerances. The sample shall withstand being cold bent through an angle of 180 degrees flat upon itself, without failure of the outside of the bent portion. The type of certification for copper flashing will be covered by the Frequency Manual and shall
970 be in accordance with 916.

910.17 Bronze or Copper Alloy Plates

Bronze or copper alloy to be used for self lubricating bearing plates shall conform to one of the following requirements based on the design unit loading set out on the plans.

Design Unit Loading not over	Shall Conform to ASTM
A. 3000 psi (20684271 Pa)	B 22, Alloy C86300
B. 2500 psi (17236894 Pa)	B 100, Alloy C51000
C. 2000 psi (13789514 Pa)	B 22, Alloy C91100
D. 1000 psi (6894757 Pa)	B 22, Alloy C90500*
* Up to 2.5% lead allowed	

The sliding surfaces of the plates shall be provided with cylindrical recesses with a depth necessary to provide proper containment of the lubricant. The recesses
980 shall be arranged in a geometric pattern so that each successive row will overlap in the direction of motion. The total area of the recesses shall comprise no less than 25% and no more than 35% of the total area of the plate.

The surface finish of bearing areas shall be in accordance with ANSI B46.1 #125. The lay of tool marks shall be in the direction of expansion or contraction of the structure. If the surface is ground, grinding knurls may be omni-directional. Flat bearing surfaces shall be flat to a tolerance of ± 0.0005 in. (0.0125mm). Curved bearing surfaces shall be machined to a tolerance of ± 0.0005 in. (0.0125 mm) in each 1 in. (25 mm) of length perpendicular to the circular section. The radius of
990 curved bearing surfaces shall have the following tolerances.

	Positive Tolerance	Negative Tolerance
Concave Surface	0.010 in. (0.25 mm)	0.000 in. (0.000 mm)
Convex Surface	0.000 in. (0.000 mm)	0.010 in. (0.25 mm)

The lubricant shall be of the solid type. It shall consist of graphite and metallic substances having lubricating properties with a lubricating binder. The lubricant shall be free of any material that causes abrasive or corrosive action on the metal surfaces. It shall withstand the atmospheric elements. The lubricant shall be compressed into the recesses of the bearing plate by hydraulic pressure to form a dense non-plastic lubricating insert.

1000 At the time of assembly in place, the steel surfaces which bear on the self lubricating bearing plate shall be lubricated with additional lubricant furnished by the

manufacturer. White lead, tallow, or other coating shall be removed before the application of the lubricant.

The coefficient of friction between the self lubricating plate and the steel plates in contact with them shall not exceed 0.10 when subjected to twice the designed loading.

1010 Material furnished under this specification shall be covered by a type C certification in accordance with 916.

910.18 Fence, Fittings, and Gates

(a) Farm Field or Woven Wire Fence

This fence shall be in accordance with ASTM A 116. The wire shall be No. 9 gage (3.8 mm). The design shall be 1047-6-9. The coating shall be class 3. The method of securing the vertical stays to the horizontal wires may be either of those shown on the plans. Diagonal braces shall be in accordance with 910.18(b)3.

1020 (b) Steel Fabric Chain Link Fence

This fence shall be in accordance with ASTM A 392 for galvanized steel fabric or ASTM A 491 for aluminum coated steel fabric. The height of the fabric shall be 48 in. (1.22 m) unless otherwise specified. It shall be of No. 9 gage (3.8 mm) wire woven in 2 in. (50 mm) mesh. The fabric shall be knuckled at the top and bottom selvages when the height is less than 72 in. (1830 mm). Fabric of 72 in. (1830 mm) in height or higher shall be knuckled at the top and shall have the twisted and barbed finish at the bottom. For galvanized fabric, coating shall be done after weaving and shall be class II, average of 2 or more specimens no less than 2.0 oz/sq ft (610 g/m²) and no less than 1.8 oz/sq ft (549 g/m²) for any individual specimen. For aluminum coated fabric, coating shall be class II, 0.40 oz/sq ft (122 g/m²) minimum.

The fabric shall be furnished with ties required for fastening it to the top and bottom tension wires. These fastenings may be of aluminum wire or strip of approved gage and design, or of galvanized steel wire in accordance with the manufacturer's standard design. If galvanized steel wire ties are furnished, the wire shall be no smaller than No. 12 gage (2.7 mm). Sufficient ties shall be furnished to provide for attaching to the top and bottom tension wires each 24 in. (600 mm). Fittings necessary to make complete installation shall be pressed or rolled steel, forged steel, cast steel, or malleable iron.

1040

Steel fabric chain link fence shall be as shown on the plans and as set out above.

1. Tension Wire

Tension wire intended for use on the top or bottom of steel chain link fence or on the bottom of farm field fence when specified shall be spring coil or crimped steel wire with an initial diameter of 0.177 ± 0.005 of an in. (4.5 ± 0.1 mm), a minimum breaking load of 1,950 lb (8.67 kN), and a coating of either zinc or aluminum. The

910.18

minimum weight (mass) of coating shall be 0.80 oz/sq ft (244 g/m²) for galvanized wire and 0.40 oz/sq ft (122 g/m²) for aluminum coated steel wire. The weight (mass) of aluminum coating shall be determined in accordance with ASTM A 428.

2. Stretcher Bars, Truss Rods, and Turnbuckles

Stretcher bars shall be 3/16 by 3/4 in. (4.8 by 19.0 mm) flat bars. These bars, truss rods, turnbuckles, and necessary fittings shall be of good commercial quality steel, malleable iron, or wrought iron. They shall be galvanized in accordance with ASTM A 153 after fabrication. The turnbuckles shall be made from drop forged malleable iron. They shall have a minimum take up of 4 in. (100 mm). The fittings may be pressed or rolled steel, forged steel, cast steel, or malleable iron.

1060

3. Braces

Braces shall be made of steel pipe with bolted steel couplings or connections. Steel pipe shall be in accordance with ASTM F 1083. They shall be galvanized as set out therein. Fabrication or manipulation that causes minor damage to the galvanized coating shall be corrected by approved application of a high zinc dust-zinc oxide paint conforming to the requirements of Federal Specification TT-P-641 type II or Military Specifications DOD-P-21035. When spray paints are used, two coats shall be applied. Damaged braces will be rejected.

4. Barbed Wire

1070

Barbed wire used at the top and bottom of farm field fence, or as otherwise specified, and in accordance with 603 shall be in accordance with applicable provisions of ASTM A 121. It shall be composed of No. 12 1/2 gage (2.5 mm) galvanized or aluminum coated steel wire with four round 14 gage (2.0 mm) barbs at approximately 5 in. (125 mm) spacing. The galvanized coating shall be in accordance with class 3 in Table 2. The minimum aluminum coating shall be in accordance with class 60 for the line wire and class 20 for the barb wire. The weight (mass) of coating shall be determined in accordance with ASTM A 428. The use of aluminum barbs, in accordance with ASTM B 211 (B 211M), alloy 5052-H38, nominal diameter No. 14 gage (2.03 mm), will be permitted.

1080

The use of barbed wire with No. 15 1/2 gage (1.70 mm), high tensile strength line wires, and No. 16 1/2 gage (1.47 mm) barbs will be permitted. The barbs shall be round with four points and spaced at approximately 5 in. (125 mm) intervals. The barbed wire shall be in accordance with ASTM A 121. The galvanized coating shall be in accordance with class 3 in Table 2.

(c) Aluminum Fabric Chain Link Fence

This fence shall be in accordance with the applicable requirements of 910.18(b) except for composition of materials. Requirements for the various component parts of aluminum fence shall be as shown in Table 1.

1090

TABLE 1

ITEM	ASTM REFERENCE	ALLOY	ADDITIONAL INFORMATION
Fabric	B 211 (B 211M)	Alclad 5056 or 6061-T94	
Barbed Wire - Line	B 211 (B 211M)	5062-0, H38, or 6061-T89	2-strand dia. 0.110 in. (2.8 mm) 4-pt barb. dia. 0.080 in. (2.0 mm) 5 in. (127.0 mm) space
Barbs	B 211 (B 211M)	5052-H38	
Tension Wire	B 211 (B 211M)	Alclad 5056 or 6061-T94	Dia. 0.192 in. (4.9 mm); Note 1
Hog Ring Fasteners	B 211 (B 211M)	6061-T94	Dia. 0.110 in. (2.8 mm)
Wire Ties	B 211 (B 211M)	1100-H18	Dia. 0.148 in. (3.8 mm)
Flat band ties	B 211 (B 211M)	3003-H14	1.2 in. (12.7 mm) wide; 0.06 in. (1.5 mm) thick
Stretcher Bars	B 211 (B 211M)	6063-T6	3/4 in. (19.0 mm) by 1/4 in. (6.4 mm); square edges
Truss and Brace Rods	B 211 (B 211M) or B 221 (B 221M)	6061-T6	Dia. 3/8 in. (9.5 mm)
Turn Buckles	B 26 (B 26M) (cast parts), B 211 (B 211M) (wrought)	356.0-T6 6061-T6	
Bands	B 221 (B 221M)	6063-T6	1/8 in. (3.2 mm) by 1 in. (25 mm) beveled edge
Bolts	B 211 (B 211M) or B 221 (B 221M)	2024-T4	ASA B 18.2 hexagon threads class 2, 2A, or 2B
Nuts	B 211 (B 211M) or B 221 (B 221M)	6061-T6	
Expansion Sleeves	B 210 (B 210M)	3003-H18	1.695 in. (43.1 mm) ID by 0.078 in. (1.98 mm); wall drawn type. 6 in. (152 mm) long; self centering
Post Tops, Rails And Brace Ends	B 26 (B 26M) or B 108	356.0T6	Fabricated in permanent molds or sand castings
Top and Brace Rails	B 241 (B 241M) and B 429	6063-T6	1 1/4 in. (31.8 mm) pipe; Note 2
Barbed Wire Extension Arms	B 26 (B 26M) or B 108	356.0T6	Fabricated as for post tops; sheet castings
Line Posts	B 241 (B 241M) and B 429	6063-T6	2 in. (50 mm) pipe; Note 2
Corner Posts	B 241 (B 241M) and B 429	6063-T6	2 1/2 in. (63 mm) pipe; Note 2
Note 1: Aluminum coated steel wire in accordance with 910.18(b) may be used.			
Note 2: ANSI schedule 40 pipe, plain ends.			

(d) Gates

Gate posts sizes shall be as follows:

ANSI Nominal Pipe Size	Swing Gate Opening, (inclusive)	
	Single Gate	Double Gate
2 1/2 in. (64 mm)	Up to 6 ft (1.83 m)	Up to 12 ft (3.66 m)
3 1/2 in. (89 mm)	7 to 13 ft (2.13 to 3.96 m)	13 to 26 ft (3.96 to 7.92 m)
6 in. (152 mm)	14 to 18 ft (4.27 to 5.49 m)	27 to 36 ft (8.23 to 11.28 m)
8 in. (203 mm)	19 to 32 ft (5.79 to 9.75 m)	37 to 64 ft (11.27 to 19.51 m)

1. Steel Gates

1100 Steel gate posts shall be standard weight (mass), galvanized, steel pipe in accordance with ASTM F 1083 and furnished with all necessary fittings. Post sizes shall be as set out above. The gate frames shall be of standard weight (mass), galvanized, steel pipe in accordance with ASTM A 53; of 1 1/2 in. (38.1 mm) nominal size; and shall have welded joint or riveted construction using galvanized pressed steel or malleable fittings. Areas welded after galvanizing shall be coated with a material conforming to the requirements of Federal Specification TT-P-641, type II or Military Specifications DOD-P-21035. When spray paints are used, two coats shall be applied. Fabric coverings for gates shall be in accordance with 910.18(a) or 910.18(b). These gates shall be furnished with necessary fastenings, hinges, center stops, and locking devices galvanized after fabrication in accordance with ASTM A 153.

1110

2. Aluminum Gates

Aluminum gate post sizes shall be in accordance with 910.18(d). They shall be ANSI schedule 40 pipe and in accordance with ASTM B 241 (B 241M) or B 429, alloy 6063-T6. Gate frames shall consist of 1 1/2 in. (38 mm) schedule 40 pipe assembled by welding and/or with fittings. Pipe shall be in accordance with ASTM B 241 (B 241M) or B 429, alloy 6063-T6. Welding material and procedures shall be in accordance with the applicable AWS provisions. Formed sheet fittings shall be in accordance with ASTM B 209 (B 209M), alloy 6061-T6. Gate hinges may be offset type wrought aluminum, ASTM B 209 (B209M), alloy 6061-T6, or galvanized malleable iron. Fabric shall be in accordance with 910.18(c).

1120

(e) Control Procedures for Furnishing Fence and Accessories

1. General Requirements

All fence and accessory materials shall be subject to the control procedures set out herein. The control procedure methods which may be used are as follows.

1130 a. Suppliers qualified to furnish pretested approved stockpiled material;

- b. Suppliers not qualified or not desiring to furnish pretested approved stockpiled material.

2. Suppliers of Pretested Approved Stockpiled Material

Suppliers desiring to furnish pretested approved stockpiled material shall contact the District Materials and Tests Engineer. A written request will not be required.

1140 The requirements set out in the General Procedures for Controlling Materials Approved Prior to Delivery to the Project will apply with the following additions, modifications, or clarifications.

- a. Posts, braces, or similar pieces shall be bundled before or after sampling, but prior to approval.
- b. All tests will be preformed at the Materials and Tests Division.
- 1150 c. Basis of acceptance will be a car seal attached to each roll of fence, barbed wire or tension wire, and each bundle of posts. Acceptance numbers will not be issued for accessories such as post caps, brackets, or tie wires.
- d. If a complete roll or bundle is not shipped, the car seal shall be retained with the unused portion. The number shall be supplied to the Engineer for the material acceptance.

3. Suppliers Not Furnishing Pretested Approved Stockpiled Material

1160 Suppliers not desiring to retain status or who lose status to furnish pretested stockpiled material will have their material inspected at the project site after delivery. No material may be used until it has been tested and approved.

910.19 Overhead Sign Structures

The complete structure with signs in place shall be able to withstand wind pressure in accordance with AASHTO specifications for the Design and Construction of Structural Supports for Highway Signs. The structure shall be designed to resist movement by the wind which might contribute to the fatigue of the material.

1170 All prefabricated structural units shall be packed so that there is no injury or defacement during transportation to the point of destination.

All bolts, nuts, and washers for bridge bracket assemblies shall be stainless steel in accordance with ASTM F 738M.

Strain poles for cable span signs shall be in accordance with 922.05(a). Each strain pole shall include three band type attachments for span wire clamps. Such

910.19

1180 attachments shall be galvanized in accordance with ASTM A 153. Cable shall be in accordance with 922.06(b). Each cable shall include three wire rope clips at each end. Anchor bolts shall be in accordance with 922.05(c)6. All sign mounting hardware except for the extruded aluminum bar shall be galvanized in accordance with ASTM A 153.

Material furnished under this specification shall be covered by a type C certification in accordance with 916.

(a) Aluminum Overhead Sign Structures, Box Truss and Bridge Attached

1190 Extruded tubes shall be of aluminum in accordance with ASTM B 221 (B 221M), B 241 (B 241M), or B 429, alloy 6061-T6. Anchor base castings shall be of aluminum in accordance with ASTM B 26 (B 26M) or B 108, alloy 356.0-T6. All other castings shall be of aluminum in accordance with ASTM B 26 (B 26M), alloy 356.0-T6. Plates shall be of aluminum in accordance with ASTM B 209 (B 209M), alloy 6061-T6. Plates shall be free of sharp edges and irregularities.

Welding material and procedures shall be in accordance with applicable AWS provisions.

1200 Bolts, nuts, screws, and flat washers shall be passivated type 304 stainless steel. Bolts and screws shall be in accordance with ASTM A 193 (A 193M), grade B8. Hexagon nuts and washers shall be in accordance with ASTM A 194 (A 194M), grade 8.

1210 Anchor bolts shall be in accordance with ASTM A 307. A hexagon nut, leveling nut, and flat washer in accordance with ASTM A 307, grade A, shall be furnished with each anchor bolt. Threaded ends of anchor bolts and associated hardware shall be coated in accordance with ASTM A 153 or be mechanically galvanized and conform to the coating thickness, adherence, and quality requirements of ASTM A 153, class C.

1220 Certified proof of the qualifications for a minimum of two welders shall be presented after the contract is awarded and before fabrication is started. This certification shall be from a commercial or public testing laboratory and qualifications shall be based on welding of aluminum alloy, 6061-T6 with consumable electrode type welding using aluminum alloy ER4043 filler material. Welders shall qualify by passing the requirements of "Procedure and Performance Tests of Qualification Standard for Welding Procedures, Welders, and Welding Operations", latest edition, formulated by the Boiler and Pressure Vessel Committee of the American Society of Mechanical Engineers.

Welding shall be checked carefully by visual inspection. Poor welding workmanship as noted by visual inspection shall be sufficient cause for rejection.

Each complete structure shall be warranted that it is free from any misfits or structural deficiencies prior to shipment.

(b) Steel Overhead Sign Structures, Box Truss, Cantilever, Monotube, and Bridge Attached

- 1230 Steel sections used for upright members, cross beams, or horizontal members shall be either tapered or constant cross section tubular members as specified herein. The tubular members may be either circular or multi-sided.

Box truss and bridge attached structures shall be fabricated from constant cross section tubular steel in accordance with ASTM A 53, type E or S, grade B. Constant cross section tubular steel with greater yield strength may be used, with written approval. However, structural dimensions must remain as shown on the plans. Structures shall be galvanized after fabrication in accordance with ASTM A 123.

- 1240 Tri-cord truss, cantilever, and monotube structures shall be made of tapered tubular members in accordance with either ASTM A 595 or ASTM A 572, grade 50 (A 572M, grade 345), or of constant cross section tubular members in accordance with API High Test Line Pipe, grade X-52. Members shall have a minimum yield strength of 50,000 psi (345 MPa). Structures shall be galvanized after fabrication in accordance with ASTM A 123.

- 1250 Strain poles shall be anchor bolt type complete with hand-holes and pole top or cap. They shall meet the requirements set out above for cantilever sign structures. Each pole is to include 3 band type attachments for span wire clamps. The band shall be from material in accordance with ASTM A 572, grade 50 (A 572M, grade 345); ASTM A 606; or approved equal. The bands shall not be of the U-bolt type. The poles shall have maximum deflections as shown below when loaded 18 in. (450 mm) from the top with a 100 lb (445 N) load.

Pole Size

Deflection

15 in. x 30 in. (380 mm x 910 mm).....0.16 in. (4.1 mm)

14 in. x 26 in. (356 mm x 790 mm).....0.12 in. (3.0 mm)

- 1260 The steel flanges at the center of the cross beam and at the ends of the horizontal arms shall be fastened to the tapered or straight sections by means of two circumferential welds. One of the circumferential welds shall weld the outside of the flange firmly to the tube. The flange connection shall develop fully the strength of the tubular sections being joined together by means of the flange connections.

Gusset, flange, and base plates shall be in accordance with ASTM A 36 (A 36M) and shall be galvanized after fabrication in accordance with ASTM A 123. Base plates for upright poles shall develop the full strength of the poles. Castings for the vertical pole top and horizontal arm and cap shall be in accordance with ASTM

910.20

- 1270 A 126 and shall be galvanized with a minimum coating of 2 oz/sq ft (610 g/m²). Bolts, except anchor bolts, and nuts shall be in accordance with ASTM A 307. Two nuts for use in plumbing upright poles shall be furnished with each anchor bolt. Anchor bolts, except for box truss structures, shall be in accordance with ASTM A 675, grade 90 (A 675M, grade 620); ASTM A 576 modified to 55,000 psi (379 MPa) minimum yield strength; or ASTM A 307, grade A modified to 55,000 psi (379 MPa) minimum yield strength. Anchor bolts for box truss structures shall be in accordance with 910.19(a). Steel bolts, nuts, washers, and threaded ends of anchor bolts shall be coated in accordance with ASTM A 153 or be mechanically galvanized and conform to the coating thickness, adherence, and quality requirements of ASTM A 153, class C. Welding shall be in accordance with 711.32.
- 1280

Beam clamp details and sign support assemblies shall be galvanized in accordance with ASTM A 153. Clamps shall be fabricated of high strength, low alloy steel in accordance with ASTM A 242 (A 242M), ASTM A 606, or approved equal. Stainless steel U-bolts may be used in lieu of the clamps for the attachment of the sign hangers to the arms of double arm cantilevers. The U-bolts shall be in accordance with 910.19(a) for stainless steel hardware.

910.20 Steel Bridge Railing Components

- 1290 Materials for steel bridge railing components shall be in accordance with the following.
- (a) Railing tubing shall be in accordance with ASTM A 500, Grade B.
 - (b) Posts, connection plates, splice bars, base plates, and anchor channel bars shall be in accordance with ASTM A 36 (A 36M).
 - (c) Steel bolts, nuts, and cap screws shall be in accordance with ASTM A 307.
 - (d) Railing end caps shall be steel castings in accordance with ASTM A 27, grade 70-36 (A 27M, grade 485-250).
 - (e) Threaded rods, nuts, and washers shall be in accordance with AASHTO M 164.
 - (f) Steel washers shall be standard round cut or lock washers, as shown on the plans.
 - (g) Cap screws shall be stainless steel in accordance with ASTM A 276, type 304, 305, or 430.
 - (h) Anchor bolts shall be stainless steel in accordance with ASTM A 276, type 305 or 430. However, they shall have a minimum ultimate strength of 100 ksi (690 MPa). Threads may be cut or rolled.
- 1310

- (i) Railing tubing, posts, connection plates, splice bars, base plates, anchor channel bars, and railing end caps shall be galvanized after fabrication in accordance with AASHTO M 111.

1320

Bolts, nuts, cap screws, washers, and lock washers shall be galvanized after fabrication in accordance with AASHTO M 232.

- (j) Anchor bolts furnished under this specification shall be covered by a type A certification in accordance with 916. All other components furnished under this specification shall be covered by a type C certification in accordance with 916.

910.21 Steel Sheet Piling

- 1330 Steel sheet piling shall be in accordance with ASTM A 328 (A 328M), ASTM A 1011 (A 1011M), or ASTM A 525 (A 525M).

SECTION 911 – WOOD MATERIALS

911.01 Untreated Lumber

(a) General

Untreated lumber is a saw mill product which is not further manufactured than by sawing, resawing, passing lengthwise through a standard planing machine, cross cutting to length, and machining but is not treated with preservatives.

- 10 All lumber to be used without preservative treatment shall have the heart center completely boxed in pieces 6 in. (150 mm) and over in thickness. Pieces not large enough to box the center shall be cut outside the heart. Stringers, floor beams, and flooring shall have no less than 80% of heart on any girth. Caps, sills, and posts shall have no less than 60% of heart on each of the four sides measured across the side. Bracing, struts, rails, and such shall have no less than 80% on both sides measured across the side. If plans or purchase order are marked "Square Edge", no wane will be permitted.

1. Boards

- 20 Yard lumber less than 2 in. (50 mm) thick and more than 1 in. (25 mm) wide is a board.

2. Dimension Lumber

Lumber from 2 in. (50 mm) to but not including 5 in. (125 mm) thick and 2 in. (50 mm) or more wide is dimension lumber.

3. Structural Lumber

Lumber that is 2 in. (50 mm) or more thick and 4 in. (100 mm) or more wide intended for use where working stresses are required is structural lumber. The

- 30 grading of structural lumber is based on the strength and use of the entire piece. Joists and planks shall be structural lumber. Dimensions and grade of lumber shall be as shown on the plans or as otherwise specified.

4. Timbers

Lumber of 5 in. (125 mm) or more in the least dimension is timber. Timbers may be classified as beams, stringers, posts, caps, sills, girders, purlins, etc. Timber for structural purposes shall be no less than 6 in. (150 mm) in width or thickness. Dimensions and grade of lumber shall be as shown on the plans or as otherwise specified.

40

5. Timbers, Round

These timbers are used in the original round form, such as poles, posts, and mine timbers. Round timbers, such as posts and poles, shall be entirely peeled. All limbs and knots shall be trimmed flush. Unless otherwise permitted or shown on the plans, no minus tolerances will be permitted on the specified diameter.

6. Yard Lumber

- 60 Lumber of all sizes and patterns that is intended for general building purposes is yard lumber. The grading of yard lumber is based on the intended use of the particular grade and is applied to each piece with reference to its size and length when graded without consideration to further manufacture.

7. Surfaced or Dressed Lumber

This is lumber that is dressed by running it through a planer.

8. Rough Lumber

Lumber as it comes from the saw is rough lumber.

(b) Species and Grade

- 60 Only coast region douglas fir, red oak group, redwood, long or short leaf southern yellow pine, and white oak group will be permitted, except as set out elsewhere herein. Redwood lumber shall not be used in bridges where it is a permanent part of the structure.

Except as otherwise provided, all lumber furnished under these specifications shall be of the species and grades specified.

- 70 Softwood lumber shall be graded in accordance with grade rules which conform with the basic provisions of the American Softwood Lumber Standard PS20-70. It shall be grade marked and shall be in accordance with the applicable grading rules or specifications of the following agencies for the species indicated.

Coastal Region Douglas Fir – West Coast Lumber Inspection Bureau

Southern Yellow Pine – Southern Pine Inspection Bureau

Redwood – Redwood Inspection Service

80 Red and White Oak Group, Hardwood Lumber, shall be grade marked and shall be in accordance with the applicable grading rules of the National Hardwood Lumber Association.

If lumber is not to be graded as provided above, it may be green or seasoned, but shall be sound, free from excessive wane, unsound loose or hollow knots, knot holes, shakes, or other defects which would impair strength or durability for the use intended. Pin holes, shot holes, or occasional grub holes in oak are not classified as defects. If approved and if the proposed use of the material is stated on the purchase order, grade markings may not be required on native red or white oak groups furnished from local sources or on emergency orders or small orders of douglas fir
90 and southern yellow pine.

Lumber for temporary bridges or other temporary structures may be of any species and grade which meets approval.

(c) Inspection

All lumber regardless of grade markings may be inspected for grades and quality at the point of origin or final destination. If, during inspection of a lot of lumber, it becomes apparent that the quantity of rejections exceed 20% , the entire lot may be rejected.
100

(d) Tolerances

Tolerances for rough sawed, or dressed lumber shall be in accordance with the following table.

Nominal Dimensions		Rough Lumber Tolerances*		Surfaced Lumber Tolerances (SIS and S2S to S4S)	
Thickness in. (mm)	Width in. (mm)	Thickness in. (mm)	Width in. (mm)	Thickness in. (mm)	Width in. (mm)
1 (25)	Under 8 (200)	1/8 (3)	1/4 (6)	1/4 (6)	3/8 (10)
	8 (200) and over	1/8 (3)	3/8 (10)	1/4 (6)	1/2 (13)
2 (50)	Under 8 (200)	1/4 (6)	1/4 (6)	3/8 (10)	3/8 (10)
	8 (200) and over	1/4 (6)	3/8 (10)	3/8 (10)	1/2 (13)
Over 2 (50) but Less than 8 (200)	Under 8 (200)	1/4 (6)	1/4 (6)	3/8 (10)	3/8 (10)
	8 (200) and over	1/4 (6)	3/8 (10)	3/8 (10)	1/2 (13)
8 (200) and over	8 (200) and over	3/8 (10)	3/8 (10)	1/2 (13)	1/2 (13)
* If full size rough lumber is specified, no minus tolerances will be permitted.					

(e) Untreated Piling

Untreated piles shall be cut from white or red oak, dense southern yellow pine, fir, or cypress, preference given in the order named. Subject to approval, they may be of other species which can withstand driving without showing excessive brooming or splitting.

All piling shall have been cut from sound, solid, live trees. The shall contain no ring shakes, dot, or unsound knots. Sound knots will be permitted provided the diameter of the knot does not exceed 4 in. (100 mm) or 1/3 of the diameter of the pile where it occurs, whichever is the smaller. Any defects, or combination of defects, which impair the strength of the pile will not be permitted. The piles shall be free from twist of grain exceeding 1/2 of the circumference in any 20 ft (6.1 m) of length. The butts shall be sawed square and the tips sawed square or tapered to a point of not less than 16 in.² (10 300 mm²) with the tip so formed that the centerline of the pile passes through the tip.

Unless otherwise specified, all piles shall be peeled before driving by removing all the rough bark and at least 80% of the inner bark. No strip of the inner bark remaining on the pile shall be more than 3/4 in. (19 mm) wide and there shall be at least 1 in. (25 mm) of barkfree surface between any two such strips. Not less than 80% of the surface on any one circumference shall be clean wood. Piles shall be cut above the ground swell, and shall have a uniform taper from butt to tip. All knots shall be trimmed flush with the body of the pile.

A line drawn from the center of the tip to the center of the butt shall not fall outside the center of the pile at any point more than 1% of the length of the pile. In short bends, the distance from the center of the pile to a line stretched from the center of the pile above the bend to the center of the pile below the bend shall not exceed 4% of the length of the bend, but in no case more than 2 1/2 in. (63 mm). Piles shall be free from reverse bends.

After peeling, piles shall have diameters as indicated below unless otherwise approved or required.

Length of Pile	Diameter – Inches (mm)		
	Tip Minimum	3' (0.9 m) from Butt, Minimum	Butt Maximum
Less than 20 ft (6.1 m)	8 (200)	11 (279)	20 (508)
20 ft (6.1 m) and less than 40 ft (12.2 m)	8 (200)	12 (305)	20 (508)
40 ft (12.2 m) and less than 60 ft (18.3 m)	7 (178)	13 (330)	20 (508)
60 ft (18.3 m) and more	6 (152)	13 (330)	20 (508)

140

911.02 Treated Lumber

(a) General

Treated lumber shall be lumber which is preservative treated by pressure processes in accordance with the AWP Standards. AWP Standard C1 specifies general requirements for all wood products. Other AWP Standards applying to specific items are set out in 911.02(b), 911.02(c), 911.02(d), and 911.02(e) and 911.02(g). Lumber to be treated shall be in accordance with 911.01, except as modified in 911.02(b), 911.02(c), 911.02(d), and 911.02(e). The lumber may be inspected at the treating plant. Preservatives shall be in accordance with 911.02(f). Wherever ammoniacal copper quat type B preservative is utilized, stainless steel fasteners shall be used.

150

(b) Bridge Lumber

This shall be southern yellow pine or coast region douglas fir. There shall be no heartwood requirements and the amount of sapwood shall not be limited. Wane will not be permitted on any treated plank for flooring and may be excluded elsewhere when so specified. In other lumber, wane shall not exceed 1/8 of the width of any face and 1/4 of the length of the piece on any one corner. Both the outer and inner bark shall be removed from any area where wane is permitted. Lumber for bridges shall be treated with a preservative in accordance with applicable provisions of Standards C14 and C2 of the AWP Standards.

160

(c) Piling

Wood piling, before treatment, shall be in accordance with 911.01(e) except piles shall be southern yellow pine, red oak, or coast region douglas fir. The outer and inner bark shall be removed before treatment. Unless otherwise specified, piling shall be treated with creosote in accordance with the applicable provisions of Standards C14 and C3 of the AWP Standards.

170

(d) Guardrail Posts, Braces, and Battens

Wood for these items shall be cut from live, dense southern yellow pine, coast region douglas fir, red oak, or other species if so designated in the proposal or

purchase order. Posts shall be rough sawed unless otherwise specified. Dimensions shall be as shown on the plans. There shall be a length tolerance of plus 2 in. (50 mm) for posts. The bottoms shall be sawed square and the tops roofed as shown on the plans. Wane shall not extend more than 2 ft (0.6 m) from the bottom end. Knots shall be closely trimmed, but hollow knots extending in close to the center of the post, loose knots, and knot clusters will not be permitted. Posts shall be
 180 practically straight and no post with a crook exceeding 1 in. (25 mm) between top and butt will be accepted.

Posts listed above shall be sound posts. No sapwood rot will be permitted. Ring shake will not be permitted and oak posts shall be free from pecks or excessive grub holes. Grub holes in the butt, 1/2 in. (13 mm) or less in diameter, are not considered defects. Posts containing ant holes will not be accepted. Any post which contains any defect which is detrimental to the post will be rejected.

Wood braces and battens shall be of the same general species and specifications
 190 as required for the posts and shall be of the dimensions shown on the plans.

Wood guardrail posts, and wood parts in connection with guardrails, shall be treated with a preservative in accordance with the applicable provisions of Standards C14 and C2 of the AWP Standards.

(e) Sign Posts

Wood sign posts shall be cut from live catalpa; northern white cedar; native red cedar; southern red cedar; black locust; yellow locust; mulberry; red, black, and white oak group; osage orange; dense southern yellow pine; redwood; sassafras;
 200 coast region douglas fir, or other species as specified. Posts shall be surfaced four sides.

Dimensions shall be in accordance with the plans. There shall be a length tolerance of 2 in. (50 mm). Both butt and top ends shall be sawed square. All outer and inner bark shall be removed. One way sweep, not exceeding 1 in. (25 mm) between the top and butt, will be acceptable. Short crooks will not be permitted.

The posts shall be sound timber. No splits, shakes, excessive cracks, loose decayed or hollow knots will be permitted. Occasional pin, shot, or grub holes in
 210 oak, or bird pecks in other timbers, will not be considered defects. All posts shall be entirely treated with preservatives in accordance with all applicable provisions of Standards C14 and C2 of the AWP Standards. The oil carrier shall be a heavy petroleum solvent in accordance with the applicable provisions of Standard P9 of the AWP Standards and shall be of such characteristics that the posts will be suitable for painting with an oil base paint.

(f) Sawed Timber Posts and Blocks for Thrie-Beam and W-Beam Guardrail

The requirements for posts and blocks prior to treatment shall be as shown below.

1. Species and Grades

Wood posts shall be of the species listed, and shall be in accordance with the grading requirements specified in Table A. Wood blocks shall be of the species listed, and shall be in accordance with the grading requirements specified in Table B. Wood posts and blocks shall have a nominal cross section and dimensions as shown on the plans.

TABLE A

SPECIAL AND GRADING REQUIREMENTS FOR SAWED TIMBER GUARDRAIL POSTS		
SPECIES	POSTS & TIMBERS GRADE	GRADING RULES AGENCIES ^a
HARDWOODS		
Red Oak (Northern Red, Black, Pin, Laurel, Cherry-Bark, Scarlet, Water and Willow Oaks) ^b , Hard Maple (Black & Sugar) and Red Maple, White Ash, White-Heartwood Beech, Yellow Birch, Hickory (Mockernut, Pignut, Shagbark, and Shellbark Hickories)	Grade GRP	Department
SOFTWOODS		
Douglas Fir, Douglas Fir-Larch Southern Pine Jack Pine 8 in. x 8 in. (200 mm x 200 mm)	No. 1 or better No. 1 or better No. 1 or better	WWPA or WCLIB SPIB NHPMA
^a NHPMA (Northern Hardwood and Pine Manufacturers Assoc.); WWPA (Western Wood Products Assoc.); WCLIB (West Coast Lumber Inspection Bureau); and SPIB (Southern Pine Inspection Bureau).		
^b Southern Red Oak will not be permitted.		

Posts and blocks shall be graded in accordance with grading rules based on principles and methods specified in ASTM D 245. Where there is a conflict between AWPMA and ASTM standards, AWPMA will prevail. Where there is a conflict between either AWPMA or ASTM standards and this specification, this specification will prevail.

All material shall show the approved grading agency stamp indicating mill origin, species, and grade.

TABLE B

SPECIES AND GRADING REQUIREMENTS FOR SAWED TIMBER GUARDRAIL BLOCKS		
SPECIES	POSTS & TIMBERS GRADE	GRADING RULES AGENCIES ^a
HARDWOODS		
Red Oak (Northern Red, Black, Pin, Laurel, Cherry-Bark, Scarlet, Water and Willow Oaks) ^b , Hard Maple (Black & Sugar) and Red Maple, White Ash, White-Heartwood Beech, Yellow Birch, Hickory (Mockernut, Pignut, Shagbark, and Shellbark Hickories)	Grade GRP	Department
SOFTWOODS

^a NHPMA (Northern Hardwood and Pine Manufacturers Assoc.); WWPA (Western Wood Products Assoc.); WCLIB (West Coast Lumber Inspection Bureau); and SPIB (Southern Pine Inspection Bureau).		
^b Southern Red Oak will not be permitted.		

2. Department Grade GRP

The requirements for posts to be in accordance with the Department's Grade GRP, Guardrail Posts, will be as follows.

a. Splits

Splits in the plane of the bolt hole shall not exceed 3 in. (75 mm). At other locations, splits shall not exceed 6 in. (150 mm).

b. Checks

Single checks shall not be greater than 3 in. (75 mm) deep. Checks opposite each other shall not total more than 3 in. (75 mm) deep, as measured with a probe that is not more than 1/16 in. (1.6 mm) in thickness or in diameter.

Single checks of 1/4 in. (6 mm) wide, or wider, measured at the widest point, shall not extend more than one third of the length of the post. Single checks, measured at the widest point, shall not exceed 3/8 in. (10 mm) in width.

c. Shakes

Shakes, measured in the least dimension, shall not exceed 2 in. (50 mm).

Splits, checks, and shakes shall not be in combinations which may cause the post to separate into several pieces.

d. Stains

Stained heartwood, not caused by decay, shall not exceed 15% of the piece.

e. Slope of Grain

Slope of the grain shall not exceed 1 in 10.

270

f. Wane

Wane shall be less than one quarter of each face.

g. Knots

Knots shall be sound and tight. The sum of the least dimensions of all knots in a 6 in. (150 mm) length of post, all faces, shall be less than 5 in. (125 mm). Grain distortion caused by knot clusters shall not exceed 2 1/2 in. (63 mm). Knots will be permitted on all faces, but knots shall not exceed 2 1/2 in. (63 mm) in the least dimension.

280

3. Department Grade GRB

The requirements for blocks to be in accordance with the Department's Grade GRB, Guardrail Blocks, will be as follows.

a. Splits

Splits in the plane of the bolt hole shall not exceed 3 in. (75 mm). At other locations, splits shall not exceed 5 in. (125 mm).

b. Checks

290 Checks shall be in accordance with 911.02(f)2b.

c. Shakes

Shakes, measured in the least dimension, shall not exceed 3 in. (75 mm). Shakes shall not extend beyond half the standard grading length of the piece.

Splits, checks, and shakes shall not be in combinations which may cause the post to separate into several pieces.

d. Stains

300 Stained heartwood, not caused by decay, shall not exceed 25% of the piece.

e. Wane

Wane shall be less than one third of each face.

f. Knots

Grain distortion caused by knot clusters shall not exceed 4 in. (100 mm). Knots will be permitted on all faces, but knots shall not exceed 4 in. (100 mm) in the least dimension.

310

4. General Requirements

Posts and blocks shall be in accordance with the following general requirements.

a. Decay

Posts and blocks shall be free from decay before treatment.

b. Unsound Wood

Posts containing unsound wood will be rejected. Blocks may contain small spots of unsound wood provided they are well scattered.

320

c. Crook or Bow

Crook or bow shall not exceed 1 in. per 10 ft (25 mm per 3 m) length.

d. Dimensional Tolerances

Posts and blocks shall be sawed square to within -1/2 in. (-13 mm) of the specified cross-sectional dimensions. A tolerance of -2 in. (-50 mm) will be permitted on the specific length of the posts. A tolerance of -1/2 in. (-13 mm) will be permitted on the specified length of the blocks.

5. Pressure Treating Posts and Blocks

330

Pressure treating posts and blocks shall be in accordance with the following requirements.

a. Machining

Posts and blocks shall be sawed to their final shape and holes bored prior to treatment.

b. Blank**c. Inspection Before Treatment**

340

The treater shall be responsible for ensuring that the material has the required approved grading agency stamp before treatment is commenced. The stamp or marking shall be applied on a wide face at the trimmed end. The stamp shall be applied such that it remains readable after treating. Material that has been air dried or kiln dried shall be inspected for moisture content as specified below, in accordance with AWPAs Standard M2. Tests of representative pieces shall be conducted. The minimum number of tests shall be the lesser of 5% or 50 pieces out of a charge.

d. Test for Moisture Content

350

The test shall be made with an electrical resistance type moisture meter with insulated needles of 1 1/2 in. (38 mm) in length. The readings shall be corrected for species and temperature readings in accordance with the meter instructions. The readings shall be taken on one surface at mid-length with needles driven to their full length. The lot will be considered acceptable when the average moisture content does not exceed 19%. Individual pieces exceeding 23% moisture content will be rejected. Such pieces shall be removed from the lot.

e. Preservative Treatment

All posts and blocks shall be treated with a preservative as specified herein.

360

f. Material for Preservative Treatments

The preservative used for treating posts and blocks shall be in accordance with the appropriate AWP standards listed in Table C.

TABLE C

MATERIAL	AWPA Standard
Ammoniacal Copper Arsenate (ACA)	P5
Ammoniacal Copper Zinc Arsenate (ACZA)	P5
Chromated Copper Arsenate (CCA)	P5

g. Treatment Methods

Wood for guardrail posts and blocks shall be treated to be in accordance with AWP Standards C1 and C2, ASTM D 1760, and the requirements specified herein.

370

h. Sorting and Spacing

The material in a charge shall consist of the same species or consist of species within one group shown in Table D. The material shall have similar moisture content and be of similar form and size. Blocks and posts may be treated in the same charge.

Pieces in the charge shall be separated by horizontal stickers so that preservative and steam, if used, shall contact all horizontal surfaces.

TABLE D

SPECIES GROUPINGS FOR TREATMENT IN SAME CHARGE	
GROUP	SPECIES
A	Southern Pine
B	Douglas Fir
C	Jack Pine*
D	Hardwoods
* Also Red Pine and Eastern White Pine Blocks.	

380

i. Conditioning

Material may be conditioned by means of air seasoning, kiln drying, Boulton drying, vapor drying, steaming, or heating in preservative except as limited herein. Material which is air seasoned or kiln dried shall have an average moisture content not exceeding 19% before treatment. When steam conditioning, the maximum temperature shown in Table E shall not be reached in less than 1 h. If a vacuum is applied after steaming, it shall be a minimum of 22 in. (560 mm) of mercury. In addition, when using CCA, ACA, or ACZA, material shall be removed from the cylinder and permitted to cool to 120°F (49°C), or below, after steaming and before the preservative is applied. When treating southern pine, jack pine, and red pine with CCA, ACA, or ACZA, steaming will only be permitted to thaw frozen or ice coated material.

390

When conditioning by heating in preservative, the solution shall cover the material. Maximum temperatures permitted shall be those shown in Table E. Conditioning by means of heating in water-borne preservatives CCA, ACA, or ACZA will not be permitted.

TABLE E

CONDITIONING METHODS PERMITTED AND TEMPERATURE REQUIREMENTS FOR METHOD USED					
		HEATING IN			
		STEAMING		PRESERVATIVE	
SPECIES	CONDITIONING METHODS PERMITTED	Max. Temp °F (°C)	Max. Duration Hrs.	Max. Temp °F (°C)	Max. Duration Hrs.
Hard Maple	Air drying only				
Other Hardwoods ⁽¹⁾	No Steaming			220 (104)	No Limit
Southern Pine	All	245 (118)	17	220 (104)	No Limit
Eastern White Pine	All	240 (116)	4 1/2	210 (99)	6 ⁽³⁾
Other Softwoods ⁽²⁾	All	240 (116)	6	210 (99)	6 ⁽³⁾
(1) Red Oak, White Ash, White-heartwood beech, Yellow Birch, Hickory, and Red Maple					
(2) Jack Pine, Douglas Fir, and Red Pine					
(3) If seasoned material is used, otherwise, no limits					

400

j. Blank**k. Inspection During Treatment**

The treater shall determine that the preservatives used are in accordance with the requirements herein. The minimum frequency of the preservation analysis shall be each charge for the occasional single charge inspected. The minimum frequency for consecutive treatments from the same working tank shall be the first and at least one of every five additional charges, selected at random. Preservative samples shall be taken as appropriate so as to be representative of the solution in the treating cylinder.

410

l. Retentions

The minimum retentions in lb/cu ft (kg/m³) for the outer 0.6 in. (15 mm) of guardrail posts and blocks shall be those listed in Table F. Retentions shall be determined by chemical assay with samples taken after treatment in accordance with the inspection after treatment requirements shown below and the AWP Standards listed in Table F.

TABLE F

MINIMUM REQUIREMENTS FOR RETENTION OF PRESERVATIVE			
PRESERVATIVE	RETENTION lb/cu ft (kg/m ³)		AWPA STANDARD
	POSTS	BLOCKS	
CCA, ACA, or ACZA	0.60 (9.61)	0.40 (6.41)	A11

If blocks are treated along with posts, retention of the charge shall be determined by assay of borings from posts.

m. Penetration

The penetration requirements for heartwood and sapwood shall be as specified in Table G. Samples to determine penetration shall be taken after treatment in accordance with the inspection after treatment requirements shown below.

TABLE G

PENETRATION REQUIREMENTS FOR POSTS AND BLOCKS		
SPECIES	MINIMUM PENETRATION	
	HEARTWOOD	SAPWOOD
Permitted Species*	0.3 in. (8 mm)	0.6 in. (15 mm) or 90%, whichever is greater
* For Red Oak, 65% of the total annual rings shall be penetrated. If this is not possible, properly conditioned wood may be treated to refusal.		

n. Inspection After Treatment

Following treatment, the charge shall be examined by the treater for cleanliness; mechanical damage to individual pieces; treatment damage such as severe checking, splitting, or honeycombing; and for untreated areas resulting from air pockets, floating material, or insufficient height of preservative. All such material shall be removed from the remaining acceptable material before shipment.

Sampling and testing for preservative retention and penetration will be done by the Department.

o. Branding

All post and blocks shall be burn branded clearly and permanently on one of the wide faces. The brand shall be within 12 in. (300 mm) of the top of the post. The brand shall show the treater's identification, the plant designation, and the year of treatment. The month may also be included. The brand shall also show the species or group code designation shown in Table H, the preservative type, and retention, all in accordance with AWP Standard M6.

p. Conformance

The treating plant supplying the material shall be responsible for and will be required to supply a certificate indicating the species, grade, preservative type, retention, year, and name of treater.

TABLE H

GROUP CODING AS AN ALTERNATE TO SPECIES CODING*	
GROUP	CODE
Hardwoods	MH
Jack Pine	J
Other Softwoods	MS
* Species designated in Tables A and B	

q. Records

Copies of treating records, analysis records, and other records which may be necessary to determine accordance with specifications shall be made available to Department personnel or their designated representatives upon their request. Required information shall be that which is listed in Part 7.2 of AWP Standard M2. These records shall be retained by the treating plant for five years from the date of material shipment.

r. Independent Inspections

The Department may inspect the material or call for a non-Departmental inspection to verify that it is in accordance with all specifications.

6. Field Treatment of Posts and Blocks

Cuts, holes, or injuries to the surface of posts and blocks which occur after pressure treatment shall be field-treated by brushing, spraying, dipping, soaking, or coating. The Contractor shall ensure that all injuries, such as abrasions and nail and spike holes, are thoroughly saturated with the field-treating solution. Holes bored in pressure-treated materials shall be poured full of preservative. Horizontal holes may be filled by pouring the preservative into the holes with a bent funnel after temporarily plugging the other end of the hole.

The solution used for field treatment shall be a 20% solution of copper naphthenate.

7. Rejection for Degrade After Treatment

Guardrail posts or blocks developing the following degrade prior to installation will be rejected regardless of prior approvals.

- a. single checks greater than 3 in. (75 mm) deep or checks opposite each other totaling more than 3 in. (75 mm) deep, measured with a probe not more than 1/16 in. (2 mm) thick;
- b. single checks 1/4 in. (6 mm) wide or wider measured at the widest point, and extending more than one third of the length of the post or block;

912.02

(d) White Burlap Polyethylene Sheet

20 These sheets shall be in accordance with AASHTO M 171.

(e) Liquid Membrane Forming Compounds

These compounds shall be in accordance with AASHTO M 148, type 2, except the drying time requirement will be determined on a glass surface.

(f) Polyethylene Film

The sheeting shall be in accordance with AASHTO M 171.

912.02 Curing-Sealing Materials

30 Curing-sealing materials are single application curing and sealing products for portland cement concrete.

A list of approved Curing-Sealing Materials will be maintained by the Department. The list will identify pre-approved products, specify the manufacturer and product designation, and include application instructions.

In order to have a product added to the list of approved Curing-Sealing Materials, the manufacturer shall furnish to the Materials and Tests Division a type A certification in accordance with 916. Such certification shall state that the product
40 is in accordance with the requirements of NCHRP 244 Series IV Southern Climate Weathering Test, and AASHTO M 148 Type 1.

(a) The certification shall be in accordance with the applicable requirements of 916, and shall include a dated test report. The test report shall substantiate full compliance with the specifications and establish when the testing was started. Test reports older than seven years on January 1 of the approval year will not be accepted.

50 (b) If irregularities are found in the results required for such certification, copies of the original data may be required prior to reconsideration of the certification.

(c) Tests must be conducted by a state highway agency testing laboratory or a testing laboratory regularly inspected by CCRL. Proof of such inspection shall be furnished with the test report.

After a product has been approved, it will be added to the list of approved and/or Prequalified Materials. The product will remain on the list until test results on file are seven years old, provided that there are no changes in raw materials, formulation, or
60 procedures for manufacture. Results more than seven years old or products in which there has been a change in raw materials, formulation, or procedures for manufacture shall be recertified in order to remain on the list.

A curing-sealing material that performs unsatisfactorily in the field will be removed from the approved list.

912.03 Admixtures for Use in Concrete

Admixtures for use in PCC shall be selected from the Department's list of approved Admixtures for PCC. An admixture may be added to the approved list by
70 completing the requirements in ITM 806, Procedure D. Admixtures containing chloride added as an ingredient of manufacture are unacceptable.

(a) Air Entraining Admixtures

Air entraining admixtures are materials to be added to PCC mixtures at the mixer for the purpose of entraining air.

(b) Chemical Admixtures for Concrete

Chemical admixtures are materials to be added to PCC mixtures at the mixer for the purpose or purposes indicated below.

80

1. Type A

Type A is a water reducing admixture that reduces the quantity of mixing water required to produce concrete of a given consistency.

2. Type B

Type B is a retarding admixture that retards the setting of concrete.

3. Type C

Type C is an accelerating admixture that accelerates the setting and early
90 strength development of concrete.

4. Type D

Type D is a water reducing and retarding admixture that reduces the quantity of mixing water required to produce concrete of a given consistency and retards the setting of concrete.

5. Type E

Type E is a water reducing and accelerating admixture that reduces the quantity of mixing water required to produce concrete of a given consistency and accelerates
100 the setting and early strength development of concrete.

6. Type F

Type F is a high range water reducing admixture, HRWR, that reduces the quantity of mixing water required to produce concrete of a given consistency by 12% or greater.

7. Type G

Type G is a high range water reducing and retarding admixture, HRWRR, that reduces the quantity of mixing water required to produce concrete of a given consistency by 12% or greater, and retards the setting of concrete.

8. High Range Water Reducing Admixture System

HRWR admixture system is a combination of admixtures that act as a type F mixture within a concrete mixture. The system consists of chemical admixtures and an air entraining admixture. One of the components shall be a type F admixture. Components shall be in accordance with 912.03 for their respective types.

9. High Range Water Reducing and Retarding Admixture System

HRWRR admixture system is a combination of admixtures that act as a type G admixture within a concrete mixture. The system consists of chemical admixtures and an air entraining admixture. One of the components shall be a type F or a type G admixture. One of the components shall retard the setting of the concrete. Components shall be in accordance with 912.03 for their respective types.

(c) Test Report

Testing shall be performed by a recognized laboratory in accordance with ITM 806.

1. Air entraining admixtures shall be in accordance with AASHTO M 154.
2. Chemical admixtures shall be in accordance with AASHTO M 194 for their respective types.
3. Test reports shall not be more than five years old on January 1 of the approval year. New submittals of test reports more than five years old will be accepted, if all subsequent five year limited retest reports, are submitted. Subsequent limited retest results shall comply with the dating and age requirements specified above and shall include the following tests as a minimum requirement for compliance.
 - a. infrared analysis, residue by oven drying, and specific gravity;
 - b. water content and time of setting;
 - c. flexural strength at three, seven, and 28 days;
 - d. relative durability.

912.04 Latex Modifiers

The latex modifiers are an admixture to be added to the concrete mixture at the continuous mixer. The latex shall be one of the latex modifiers in the list of approved Admixtures for Portland Cement Concrete.

The formulated latex admixture shall be a non-toxic, film forming, polymeric emulsion in water to which all stabilizers have been added at the point of manufacture and shall be homogeneous and uniform in composition. A type B certification shall be furnished in accordance with 916.

160

Physical properties of the latex modifier shall be in accordance with the following:

Polymer Type	Styrene Butadiene
Stabilizers	Anionic and Nonionic Surfactants
Anitfoaming Agent	Polydimethyl Siloxane
Percent Solids, % by Mass	46.0 Minimum
Mass Per Gallon (Liter)	8.4 lb (1.0 kg) at Minimum
pH (as shipped)	9.0-11.0
Freeze/Thaw Stability	Five Cycles, -15° to 25°C
Shelf Life	Two Years, Minimum
Color	White

170

SECTION 913 – SOIL TREATMENT MATERIALS**913.01 Water**

Water used in mixing or curing shall be reasonably clean and free of oil, salt, acid, alkali, sugar, vegetable, or other substance injurious to the finished product. Water will be tested in accordance with AASHTO T 26. Water shall be in accordance with the requirements as follows.

(a) pH	6 to 8
(b) Chloride Ions	less than 300 ppm
(c) Sulphate (SO ₄)	less than 500 ppm
(d) Total Solids	less than 1500 ppm

10

In addition, water containing algae will be unacceptable for use in concrete. Water known to be of potable quality may be used without test. Where the source of water is relatively shallow, the intake shall be so enclosed as to exclude silt, mud, grass, or other foreign materials.

913.02 Calcium Chloride

20

Calcium chloride shall be in accordance with AASHTO M 144 and shall be:

- (a) Type S, grade 1, class A

913.03

(b) Type S, grade 3, class A or B

(c) Type L

913.03 Sodium Chloride

30 Sodium chloride shall be in accordance with AASHTO M 143. Rock salt shall be used for de-icing purposes. Either rock salt or evaporated salt may be used for stabilization.

913.04 Lime

Lime shall be a hydrated lime when used in masonry or a hydrated lime, quicklime, or lime by-product when used for soil modification.

(a) Hydrated Lime for Masonry

40 Hydrated lime used in masonry shall be in accordance with ASTM C 207, Type N.

(b) Lime for Soil Modification

1. Hydrated Lime and Quicklime

Hydrated lime and quicklime shall be in accordance with AASHTO M 216.

2. Lime By-Products

Lime by-products shall be hydrated lime or quicklime by-products in accordance with ASTM C 25 having the following requirements.

- 50
- a. The lime by-products shall contain a minimum of 60% total available calcium and magnesium oxides (non-volatile basis).
 - b. Available calcium hydroxide plus magnesium oxide calculated as calcium hydroxide shall be a minimum of 30%.
 - c. Sieve analysis shall be performed in accordance with ASTM C 110. The lime by-products gradation shall be as follows:

60

Sieve	% Retained (Max)
No. 4 (4.75 mm)	5
No. 30 (600 µm)	10
No. 100 (150 µm)	25

SECTION 914 – ROADSIDE DEVELOPMENT MATERIALS

914.01 Special Topsoil for Roadside Development

This topsoil shall consist of loose friable soil, free of refuse, stumps, large roots, rocks over 2 in. (50 mm) in diameter, brush, weeds, or other material which would

be detrimental to the proper development of vegetative growth. It shall be capable of supporting normal vegetation as demonstrated by the growth of healthy vegetation on it. It shall not be taken from a source known to contain any of the noxious weeds defined as such in the Indiana State Seed Law, IC 15-4-1.

10

Topsoil shall have a pH value of 6.2 to 7.4. Testing for pH value shall be performed in the field in accordance with the procedure set out in the Purdue University Agricultural Experiment Station Bulletin No. 635 or in a qualified laboratory in accordance with the procedure set out in the Cornell Experiment Station Bulletin 960, using a one to one Soil-Water Suspension. Agricultural limestone may be added to topsoil in order to raise the pH to meet specification requirements. Topsoil shall not be incorporated into the work until it is approved.

914.02 Temporary Seed

20 Temporary seed will be approved for use by visual inspection of the Engineer. Temporary seed may be purchased from any commercial source provided the seed's package is clearly marked and labeled by the manufacturer as to its content and weight.

914.03 Fertilizer

Fertilizer shall be standard commercial fertilizer with an analysis of 12-12-12.

Tests will not be required, but fertilizer standards shall be governed by the rulings of the Indiana State Seed Commissioner.

30

914.04 Grass and Legume Seed

Grass and legume seed in the quantities and varieties required shall be furnished full-tagged and delivered in properly designated packages or bags as directed. Seeds shall be in accordance with the following requirements.

Seed of warm season grasses, forbs, or aquatic species shall be delivered to the project site individually packaged by species. Warm season grass and forb seed shall be purchased from lots for which test results are provided. Testing will not be required for aquatic species. When normal germination testing is not practical for
40 forb species, a tetrazolium test shall be conducted to determine seed viability.

Seeds shall contain none of the noxious weeds listed herein nor any that are listed in the Acts of the General Assembly of the State. Noxious weeds are Canada Thistle, Field Bindweed, Johnson Grass, Perennial Peppergrass, Perennial Sowthistle, Quack Grass, Russian Knapweed, and Wild Garlic.

Clover shall be free from dodder with no tolerance allowed. Lespedeza will be allowed no more than 90 dodder/lb (200 dodder/kg) and 45 giant foxtail per lb (20 giant foxtail per kg).

50

Requirements noted above are minimum and trade allowances will not be permitted.

Seed shall be purchased from sources of supply that have been sampled, tested, and reported by the State Seed Commissioner, Purdue University, West Lafayette, Indiana, and found to be satisfactory. Seed of warm season grasses shall be tested by the State Seed Commissioner or an independent laboratory. Seed of forbs shall be tested by an independent laboratory. Test results by independent laboratories shall be signed by a Registered Seed Technologist. Test results shall be submitted to the State
60 Seed Commissioner, and a copy to the Materials and Tests Division. This report is required before seed is sown. Such test report shall be no more than nine months old at the time seed is used and the use of the seed shall be subject to approval.

Seed which has been tested by the State Seed Commissioner may be used without further testing provided each bag of seed bears a tag showing the seed meets the requirements of the Standard Specifications.

Seed which meets the weed seed tolerance, but does not comply with the purity or germination requirements, or both, may be used provided the percentage of purity or the percentage of germination is not more than 10% below the minimum specified
70 and that the result obtained from the following formulae does not exceed the maximum percent of weed seeds permitted.

$$W \times P \times G = M \text{ or less}$$

$$P = \frac{\text{Minimum Specified Purity}}{\text{Actual Purity}}$$

$$80 \quad G = \frac{\text{Minimum Specified Germination}}{\text{Actual Germination}}$$

W = Actual percent of weed seeds

P = Purity Factor

G = Germination Factor

M = Maximum percent of weed seeds permitted

If such seeds are selected for use, the amount to be used shall be increased in accordance with the following formula except the amount used shall not be less than that specified.

$$90 \quad \text{Amount to be used} = \text{Amount specified} \times P \times G$$

VARIETY		Percentages of Weed Seed Content (Not more than)

914.05 Mulch

(a) Mulch for Seeding

Mulch for seeding may consist of straw; excelsior mulch; wood cellulose fiber mulch; excelsior blanket; paper mat; or straw mat. All mulch shall be reasonably free from primary noxious weeds in accordance with 914.04.

1. Excelsior Mulch

200 Excelsior mulch shall consist of wood fibers cut from sound green timber. The average length of the fibers shall be 4 in. to 6 in. (100 mm to 150 mm). The cut shall be made in such a manner as to provide maximum strength of fiber, but at a slight angle to the natural grain of the wood so as to cause splintering of the fibers when weathering in order to provide adherence to each other and to the soil.

2. Wood Cellulose Fiber

210 Wood cellulose fiber mulch shall be made from wood chip particles manufactured articularly for discharging uniformly on the ground surface when disbursed by a hydraulic water sprayer. It shall remain in uniform suspension in water under agitation and blend with grass seed, and fertilizer when permitted, to form a homogeneous slurry. The mulch fibers shall intertwine physically to form a strong moisture holding mat on the ground surface. The mulch shall be heat processed so as to contain no germination or growth inhibiting factors. It shall be non-toxic and colored green. The percent of moisture content shall be determined in accordance with 621.14(c), except material containing more than 15% will be rejected. The ash content shall not exceed 1.5%. One hundred grams of oven dried material saturated in water, drained, and weighed shall hold a minimum of 1000 grams of water.

3. Excelsior Blanket

220 Excelsior blanket shall consist of a machine produced mat of wood excelsior with 80% of the fibers to be 6 in. (150 mm) or longer. The wood from which the excelsior is cut shall be properly cured to achieve curled and barbed fibers. The blanket shall have a consistent thickness, with the fibers evenly distributed over the entire area of the blanket. The excelsior blanket shall be covered on the top side with a 3 in. by 1 in. (75 mm by 25 mm) leno weave, twisted kraft paper yarn netting having a high wet strength, or a biodegradable extruded plastic mesh netting having an approximate minimum opening of 5/8 in. by 5/8 in. (16 mm by 16 mm) to an approximate maximum opening of 2 in. by 1 in. (50 mm by 25 mm). The netting shall be entwined with the excelsior mat for maximum strength and ease of handling.

230 The minimum roll width shall be 4 ft (1.2 m). The mass of the material shall be not less than 0.7 lb/sq yd (0.4 kg/m²), constant mass, air dry. The rolls shall be packaged

with suitable protection for outdoor storage on the project site in a manner which protects them from biodegradation prior to use.

4. Paper Mat

Paper mat shall consist of a knitted construction of photodegradable, polypropylene yarn with uniform openings interwoven with strips of biodegradable paper. The rolls shall be packaged with suitable protection for outdoor storage at a construction site in a manner which protects them from biodegradation prior to use.

- 240 The mass of the paper shall be a minimum of 0.125 lb/sq yd (0.069 kg/m²). Roll sizes shall have a minimum width of 5 ft (1.5 m).

5. Straw Mat

Straw mat shall consist of a machine produced mat consisting of at least 90% of the total dry mass being clean straw from agricultural crops, with the exception that up to 30% of the total dry mass may be coconut fibers in lieu of an equal percentage of straw. Paper or paper related products shall not be permitted as component in the straw mat. The straw shall be evenly distributed throughout the mat to form a thickness of 1/2 in. \pm 1/8 in. (13 mm \pm 3 mm). The top side of the mat shall be covered with a photodegradable/biodegradable plastic mesh which shall be substantially adhered to the straw by a knitting process using photodegradable/biodegradable thread. The rolls shall be packaged with suitable protection for outdoor storage at a construction site in a manner which protects them from biodegradation prior to use. The average dry mass of the straw shall not be less than 0.7 lb/sq yd (0.4 kg/m²). The minimum roll width shall be 6 ft (1.8 m).

250

(b) Mulch for Plants

Mulch for plants shall consist of broken corncobs, wood chips, chopped bark, size No. 5 gravel, or crushed stone in accordance with 904.02(e), except 0% to 5% may pass the No. 200 (75 μ m) sieve, or other approved materials. The particles of wood chips, chopped bark, and corncobs shall contain no more than 10% passing the 1/2 in. (12.5 mm) screen and 100% shall pass the 3 in. (75 mm) screen. Wood chips shall be from green, hardened, deciduous trees. Broken corncobs shall be no longer than 4 in. (100 mm).

260

914.06 Leguminous Inoculants

The inoculants for treating leguminous seeds shall be standard pure culture of nitrogen fixing bacteria. They shall be no more than one year old at the time of use and shall be subject to approval. Directions of the manufacturer on containers of inoculants shall be followed when inoculating seed.

270

914.07 Sod

Sod shall consist of fibrous, well rooted, bluegrass, fescue, or other approved grass cut to a height of 2 to 3 in. (50 to 75 mm). Edges of sod shall be cut cleanly, either by hand or machine, to a uniform minimum thickness of 3/4 in. (19 mm) or more. The roots shall be exposed in the sod strip to allow the sod to be handled without undue tearing or breaking. The sod strip shall be of a uniform width of no

less than 16 in. (406 mm) and no less than 2 ft (6.1 m) in length. Sod shall be free from all primary noxious weeds in accordance with 914.04. Acceptance in the field before cutting shall not preclude rejection when delivered to the work if such contamination is found.

Nursery sod shall meet applicable requirements as set out above and shall be a variety or blend of Kentucky bluegrass or fescue. It shall comply with nursery inspections and plant quarantine regulations of the states of origin and destination as well as with Federal regulations governing interstate movement of nursery stock. A valid copy of the certification of nursery inspection shall accompany each shipment.

914.08 Plant Materials

If the plant material is shown on the Schedule of Pay Items as plant, the Contractor shall submit its source of supply for each plant material for approval prior to delivery to the project site. This plant list shall include the name of the source of supply and the location where the plants were grown. A certification that the plants are available at this source, that the plants were grown at the prescribed location, and that there is a firm commitment for their purchase at the time of certification shall be provided. These procedures shall be followed for approval of alternate sources when the originally approved source is unable to furnish plants at the time when needed. Plants shall be in accordance with the requirements set out herein. Unless otherwise specified, all plant material shall be acquired from zones 4, 5, or 6. However, plant material shall be acquired from zones no further than 1/2 zone south of the zone in which the project is located. Hardiness zones shall be determined from the Plant Hardiness Zone Map, Miscellaneous Publications No. 1475, Agricultural Research Service, United States Department of Agriculture, published by the U. S. Government Printing Office, Washington, D.C. The Contractor shall have a copy of this map.

If the plant material is shown on the Schedule of Pay Items as seedlings, the Contractor shall choose a source which is shown on the approved list of sources that is maintained by the Department. This list will specify the sources that are currently on an immediate use basis. If the source is not on the list, then the same procedure shall be followed as stated above for plants to obtain approval.

(a) Quality of Plant Material

All plants shall be first class and representative of the normal species or varieties, true to type, and standard form. Unless otherwise specified, all plants shall be nursery grown stock that had been transplanted or rootpruned two or more times according to the kind and size of plant. The root system shall be vigorous and well developed. The branch system shall be developed normally. All plants shall be free from disfiguring knots, sun-scald, injuries, abrasions of the bark, dead or dry wood, broken terminal growth, or other objectionable disfigurements.

(b) Plant Names

Plants shall be true to name, following standard botanical and common nomenclature as adopted by the American Joint Committee on Horticultural Nomenclature given in the current edition of Standardized Plant Names. All trees delivered shall be tagged legibly with the names and sizes of the trees.

330 All delivered shrubs shall be tagged legibly with the name and size of the shrub when "Tag Each" is indicated on the summary list. Otherwise, each bundle shall be tagged. If shrubs are separated individually when delivered, 20% of each species shall be tagged. A tag with the name and size of the shrub printed thereon shall be used for each species. A 1 in. (25 mm) band of non-toxic paint shall be applied to the stem of seedlings or "whips", prior to delivery, in lieu of tags. If tags are required, they shall remain attached to shrubs for the duration of the contract.

(c) Substitutions

340 Substitutions of plants in size and kind shall be made only after proper execution of a change order in accordance with 109.05 and then only when sufficient evidence has been shown that the specified stock could not be secured.

(d) Grading Standards

Grading of plants shall be in accordance with the American Association of Nursery Horticultural Standards of the current ASNS, ANSI Z 60.1 as revised herein and on the plans.

(e) Nursery Inspection and Plant Quarantine

350 All plants shall be free from plant diseases and insect pests. Shipments of plants shall be in accordance with nursery inspection and plant quarantine regulations of the states of origin and destination as well as with Federal regulations governing interstate movement of nursery stock. A valid copy of the certification of inspection shall accompany each package, box, bale, or carload shipped or otherwise delivered.

(f) Balled and Burlapped Plants

360 Balled and burlapped plants shall be dug so as to retain as many fibrous roots as possible and shall come from soil which forms a firm ball. The soil in the ball shall be the original and undisturbed soil in which the plant was grown and shall be free of noxious weeds and weed seeds. The plant shall be dug, wrapped, transported, and handled in such a manner that the soil in the ball will not be loosened enough to cause stripping of the small and fine feeding roots or cause the soil to drop away from such roots. Any indication of manufactured earth balls or mishandling of the plant will be cause for rejection. The shape and size of the ball shall be as specified in the ASNS as revised herein and shown on the plans.

(g) Container Grown Plants

Plants which are furnished in containers shall be well rooted and established in the container in which they were shipped. An established container grown plant shall be a plant transplanted into a container and grown in that container sufficiently long

for the new fibrous roots to have developed so that the root mass retains its shape and holds together when removed from the container.

370

(h) Bare Rooted Plants

The minimum root system of bare rooted trees or shrubs shall be in accordance with the standards stated in the ASNS. Bare rooted plants shall be dug only when the air temperature exceeds 35°F (2°C). Particular attention shall be given to the fibrous roots. The maximum time lapse between loading for shipment and delivery to the work or approved storage site shall be four days unless other shipping arrangements are approved.

(i) Collected Plants

380

Collected plants, when specified in connection with any species or variety, shall not be nursery grown, but shall have been grown under natural conditions at the location from which they were procured. They may be balled and burlapped or bare roots as specified in the plant list on the plans. In either case, the collected material shall be in accordance with the applicable requirements given in the current issue of ASNS for quality, size, ball, and grade.

(j) Forms, Shapes, and Condition of Plants

Vines and groundcover plants shall be in accordance with grades and specifications shown in the ASNS unless otherwise specified.

390

Plants which have been cut back from larger grades to meet specifications will not be acceptable. Plants designated on the plans as street trees, specimen, extra heavy, clump, or of other like import shall be in accordance with the standards as given in the ASNS for the special type specified.

400

Trees shall have straight trunks, be well branched, and have symmetrical tops. There shall be no cuts of limbs over 3/4 in. (19 mm) in diameter which have not completely healed over. Each tree shall have the top and root characteristics of its variety and growth that are typical of such trees in this region. Deciduous trees, unless otherwise specified, shall have branching between 1/4 and 1/2 of the distance of their height from the ground. Street trees, if so specified, shall be of uniform branching height. Bush form, when specified, shall be branching at the base of the plant or within 12 in. (300 mm) of the base. Clumps, when specified, shall have three or more main leaders or trunks starting at the ground. At least two of these shall be of the caliber specified.

(k) Inspection

410

Plant materials shall be subject to inspection at any time during the life of the contract. Such inspection shall not be construed as final acceptance of the plants involved. Any stock which is not in accordance with these specifications will be rejected and shall be removed from the project.

Balled and burlapped plants may have the ball opened for inspection, at the option of the Department, to determine if the root system is sufficient to ensure plant growth. If after breaking open, the ball is found to be acceptable, payment for the destroyed plant will be made at 50% of the contract price for the plant involved.

420 Nursery stock may be inspected at the nursery before digging or shipping and sealed with Department seals. If not inspected and sealed at the nursery, it shall be done at a final collecting point at or adjacent to the project and prior to planting, unless otherwise specified in writing. Notification shall be made a minimum of three days in advance of delivery of unsealed plants. Large quantities of small plant material such as shrubs, seedlings, vines, groundcovers, etc., shall be sealed in a satisfactory manner. Sealing of plants shall not be considered as final acceptance and shall not waive the responsibility to furnish, plant, and maintain material that complies with the specifications.

(l) Shipment

430 All precautions that are customary in good trade practice shall be taken to ensure the arrival of the plants in good condition. Plants shall be packed or covered in such a manner as to ensure adequate protection against damage while in transit. The roots of bare root plants shall be protected with wet straw or other suitable material to ensure the arrival at destination with the roots in a moist condition. When shipment is made in an enclosed vehicle, the vehicle shall be adequately ventilated to prevent over heating of the plants in transit.

(m) Certification

440 Certifications from all plant supply sources shall be furnished certifying that all plants furnished are in accordance with 914.08. These certifications shall be submitted monthly and shall contain the information as indicated on the suggested form in ITM 804.

914.09 Miscellaneous Material

(a) Water

Water used in the planting or care of vegetation shall be free from oil, acids, alkalis, salts, or any substance injurious to plant life. Water from streams, lakes, ponds, or similar sources shall not be used unless approved.

450 (b) Stakes for Bracing and Anchoring

Wood stakes for bracing or supporting trees shall be of rough cypress, cedar, locust, oak, or other approved wood free from knots, rot, cross grain, or other defects that would impair the strength of the stake for which it is to be used. Wood stakes shall be a minimum of 2 in. by 2 in. (50 mm by 50 mm) square in cross section and of adequate length. The wood bracing stakes shall be painted or stained dark green. Delineator posts in accordance with 910.15 may be used except they shall be painted dark green.

An alternate staking and bracing method using a solid rubber support cord with metal hooks and stakes, and plastic stake disk system, may be used.

(c) Tree Wound Dressing

Dressing for treating tree wounds or cuts shall be either:

1. an approved black asphaltum base antiseptic paint;
2. an approved black paint consisting of Bordeaux Mixture, raw linseed oil, and lampblack; or
3. an approved black paint consisting of zinc oxide, raw linseed oil, and lampblack.

(d) Porous Material

Porous material for tree root protection may be gravel, crushed stone, slag, or other porous material varying in size from 1 to 3 in. (25 to 75 mm) and shall be approved before being used.

(e) Pipe

Pipe for underdrains shall be in accordance with 907 or 908. The size and type shall be as specified.

(f) Staples

Staples shall be made from No. 11 gage (3.0 mm) or heavier wire, 1 or 2 in. (25 or 50 mm) wide at the throat and 6 in. (150 mm) from top to bottom after bending. The staples shall be packaged in cartons.

(g) Plastic Net

Plastic net shall consist of photodegradable, longchain synthetic polymer plastic yarn, either extruded oriented or woven into a net with the yarns fixed at each intersection such that they retain their relative positions with respect to each other. The plastic net shall have a square mesh opening of approximately 3/4 in. by 3/4 in. (19 mm by 19 mm). The plastic net shall have a minimum tensile strength of 20 lb (89 N) over a 3 in. (75 mm) width in the machine direction and 15 lb (67 N) over a 3 in. (75 mm) width in the transverse direction. The plastic net shall have a nominal mass of 2.8 ± 0.4 lb per 1000 sq ft (15.6 ± 2.2 g per m²). The plastic net shall be furnished in rolls which can be easily handled and the rolls shall be packaged in a suitable protection for outdoor storage at a construction site, which protects the material from degradation prior to use. Roll sizes shall have a minimum width of 6 ft (1.8 m).

Material furnished under this specification shall be covered by a type C certification in accordance with 916.

SECTION 915 – BRIDGE PILES AND BEARINGS

915.01 Steel Shell Encased Concrete Piles and Epoxy Coated Steel Shell Encased Reinforced Concrete Piles

(a) General Requirements

Steel shell encased concrete piles and epoxy coated steel shell encased reinforced concrete piles, as designated herein, shall consist of fluted steel, or rounded straight seamed, spiral seamed, or seamless steel pipes which, after being driven are filled with class A concrete. The steel shell encasement shall be uncoated unless an epoxy coating, in accordance with 915.01(d) is specified.

Steel pile shells shall be of the diameter and minimum wall thickness shown on the plans. All sections shall be one integral piece, substantially cylindrical, except as otherwise required for end sections of the outside diameter specified. All steel pile shells shall be of sufficient strength to withstand driving to the required penetration and bearing.

The tips of shells shall be equipped with conical driving points or flat closure plates. Conical driving points shall be of sufficient dimensions to ensure adequate joint and driving strength. The end of the shell shall have full bearing on the face of the point or against a shoulder inside the point. Unless otherwise permitted, the point shall be conical with a 60 to 90 degrees angle between faces. The point shall be substantially of the same diameter as the end of the shell and butt welded to the end of the lowest section.

If flat closure plates are used, they shall be non-reinforced and of a minimum thickness of 3/4 in. (19 mm) for shells 12 3/4 in. (324 mm) outside diameter and smaller, and 1 in. (25 mm) thick for shells 14 in. (356 mm) outside diameter. For shells larger than 14 in. (356 mm) outside diameter, the plates shall be designed to meet the particular cases. Flat plates shall have a diameter approximately 1/2 in. (13 mm) greater than the diameter of the shell and be fillet welded to the shell, using two passes or beads.

If necessary to facilitate handling, shells may be furnished in sections to be welded in the field to form the final integral lengths required.

The manufacturer shall provide a mill certification showing heat numbers and test results for the specified tests. Each pile shall be stenciled to show the diameter, wall thickness, and heat numbers for the verification of the certifications. The certifications shall be delivered before the pile shells are driven.

(b) Fluted Steel Pile Shells

Fluted steel pile shells shall have a minimum tensile strength of 50,000 psi (345 MPa) when tested in accordance with ASTM A 370. Test specimens for determination of tensile strength shall be taken longitudinally adjacent to the crest of

the flute. The diameter of fluted steel shells shall be measured from crest to crest of flutes.

- 50 A sufficient taper will be allowed to permit no less than 6 in. (150 mm) telescoping at the joints. The lowest section shall taper approximately 1 in. (25 mm) in 4 ft (1.2 m) from an 8 in. (203 mm) tip to the specified diameter of the upper end. Fluted steel pile shells with a taper of 1 in. (25 mm) in 7 ft (2.1 m) on the lowest section of long piles may be used provided a minimum of approximately 5 ft (1.5 m) of the top of the pile below cutoff elevation is the full diameter as shown on the plans.

(c) Rounded Steel Pipe Shells

- 60 Rounded steel pipe shells, except for end finish, shall be in accordance with ASTM A 252, grade 2 or 3. Welded pipe may be welded with straight or spiral seams.

(d) Epoxy Coating for Piles

Only powdered epoxy resin from the Department's list of approved Coating Materials shall be used for the epoxy coating of steel pile shells and steel H piles.

The patching or repair material shall be compatible with the coating and shall be made available by the coating manufacturer. The material shall be suitable for repairs made to coated areas damaged during fabrication or handling.

- 70 The coating color shall contrast with the color of iron oxide. All coated piles furnished for a structure shall be the same color. The patching or repair material shall also be the same color as the original coating material.

1. Prequalification of Organic Coatings for Steel Piles

The coating product shall be a 100% solids, heat curable, thermosetting, dry powdered epoxy coating. Coating manufacturers who request to have their product added to the Department's list of approved Epoxy Coatings for steel shall supply the information as follows.

80

a. Product Data Sheet

A product data sheet which shall specify the method of surface preparation, the thermal treatments before and after coating application, the coating application procedure, and the product name and description of the patching material.

b. Fingerprint

The fingerprint shall include the method of test, such as infrared spectroscopy or thermal analysis, and a generic description of the product.

90

c. Materials Safety Data Sheet

Current materials safety data sheets shall be supplied for the product and the patching material.

d. Laboratory Report

A dated laboratory report which shall substantiate full compliance with the following test requirements.

(1) Tensile Strength and Elongation

100 The tensile strength and elongation of the coating material shall be tested in accordance with ASTM D 2370 with a rate of elongation of 10% to 20% min. The minimum tensile strength shall be 8,000 psi (56 MPa). The minimum elongation shall be 5%.

(2) Impact Resistance

110 The impact resistance of the coating shall be tested in accordance with ASTM G 14 using a 5/8 in. (16 mm) diameter tip, and a 12 mil (0.03 mm) minimum coating thickness of a 1/8 in. (3.2 mm) thick panel at 73°F (23°C). Three tests shall be performed. The minimum acceptable value shall be 80 Lbf in. (9.0 N·m) of impact with no visible breaks in the coating.

(3) Abrasion Resistance

The abrasion resistance of the coating shall be tested by means of a Tabor Abraser or its equivalent, using CS-10 wheels and a 2.2 lb (1000 g) load. The minimum allowable mass loss shall not exceed 100 mg per 1000 cycles.

(4) Salt Fog

120 The weathering resistance of the coating shall be tested by means of a salt spray cabinet following ASTM B 117 for 1000 h. The coating shall not blister or exhibit corrosion, discoloration, or loss of adhesion away from the scribed area.

2. Application

The application of the epoxy coating shall be at an enclosed plant, equipped with environmental controls and automated blasting equipment. This equipment shall facilitate surface preparation and coating application in accordance with the manufacturer's recommendations and in accordance with additional requirements set out herein. The application process shall be performed by a continuous, balanced system where cleaning of the surface and application of the coating are performed at the same rate.

130 a. Surface Preparation

The pile surface shall be blast cleaned in conformance with SSPC-SP-10, Near White Metal Blast. The cleaning media shall produce an anchor pattern profile of 2 mils (50 µm) minimum. Any raised slivers, scabs, laminations or bristles of steel remaining on the newly cleaned surface shall be removed by abrasive sanders. All traces of grit and dust from the blasting shall be removed.

b. Coating Application

The coating shall be applied immediately to the cleaned surface and before visible oxidation of the surface occurs. The coating shall be applied in accordance with the manufacturer's recommendations. The recommendations shall address the equipment required for proper application, the number of coats of epoxy, cure time between coats, cure time before placing in service, and any other information needed by the Department to ensure proper performance of the material.

(1) Thickness

Thickness of the cured coating shall be measured on a representative number of piles from each production lot by the same method required by ASTM G 12 for measurement of film thickness of pipeline coatings on steel. The minimum coating thickness for fusion bonded epoxy shall be 8.0 mils (200 μm) for individual measurements and 12 mils (300 μm) for the average.

(2) Cure

The coating film shall be cured and post cured in accordance with the manufacturer's recommendations. A representative proportion of each production lot shall be checked by the coating applicator using a method found most effective for measuring cure to ensure that the entire production lot is in a fully cured condition.

(3) Continuity of Coating

After cure, the epoxy coating shall be checked by the applicator for continuity of coating and shall be free from holes, voids, contamination, cracks, and damaged areas. There shall not be more than two holidays, which are pinholes not visually discernable, in any linear foot of the coated pile. A holiday detector shall be used in accordance with the manufacturer's instructions to check the coatings for holidays. A 67 1/2 volt Tinker and Razor Model M-1 detector or its equivalent shall be used.

3. Certification

Material furnished under this specification shall be covered by a type C certification in accordance with 916. In addition, a certificate of compliance prepared by the applicator shall be furnished for each shipment of coated piles. The certificate of compliance shall state that the piles have been coated in accordance with the manufacturer's requirements; that thickness, continuity, and flexibility tests of the coating have been performed; and that the test results comply with the requirements outlined herein. Test results shall be retained by the applicator and made available for inspection upon request for a period of seven years.

915.02 Steel H Piles and Epoxy Coated Steel H Piles

Steel H piles and epoxy coated steel H piles shall be of the shape and dimensions shown on the plans or as otherwise specified. The steel shall be in accordance with ASTM A 572, grade 50. Steel H piling shall be handled in the same manner and with the same care as required in 711.56. The piles shall be uncoated unless an epoxy coating, in accordance with 915.01(d), is specified.

915.03

The manufacturer shall provide a mill certification showing heat numbers and test results for the specified tests. Each H pile shall be stenciled to show the manufacturer's name, the specifications, size and mass of section, and heat numbers for verification of the certification. The certification shall be submitted at the time of delivery of the piles.

915.03 Wood Piles

190 Wood piles shall be in accordance with 911.01(e) or 911.02(c) as specified.

915.04 Elastomeric Bearings

(a) Description

Elastomeric bearings as herein specified shall include plain bearings, consisting of elastomer only, and laminated bearings, consisting of layers of elastomer restrained at their interfaces by bonded laminates. The grade of the material shall be as shown on the plans.

200 **(b) Materials**

The elastomer portion of the elastomeric compound shall be 100% virgin natural polyisoprene known as natural rubber, or 100% virgin chloroprene known as neoprene. The cured compound shall be in accordance with Table A for natural rubber, or Table B for neoprene, depending on which type is furnished. Compounds of nominal hardness between the values shown may be used and the test requirements interpolated. When test specimens are cut from the finished product, a $\pm 15\%$ variation in tensile strength and ultimate elongation will be allowed.

TABLE A

ASTM Standard	Physical Properties	50 Duro	60 Duro	70 Duro
D 2240	Hardness	50 ± 5	60 ± 5	70 ± 5
D 412	Tensile Strength, min. psi (kPa)	2500 (17 240)	2500 (17 240)	2500 (17 240)

	Adhesion			
D 429, B	Bond made during vulcanization, lb/in. (kg/m)	40 (714)	40 (714)	40 (714)
	**Low Temperature Test			
	Bearing or sample preparation 96 h @ -20°F ± 2°F (-29°C ± 1°C), axial load 500 psi (3450 kPa) and strain of 20% "T"* Test Recorded shear resistance after 1 h (Min.) at 25% shear strain psi (kPa) shall not exceed	50 (345)	75 (517)	100 (690)
* Effective rubber thickness				
** Unless otherwise specified, the Low Temperature Test will be waived.				

Unless otherwise specified, laminates shall be rolled mild steel sheets in accordance with ASTM A 36 or ASTM A 1011, grade 36.

(c) Manufacturing Requirements

Plain bearings may be molded individually, cut from previously molded strips or slabs, or extruded and cut to length. Cut edges shall be at least as smooth as ANSI B 46.1 No. 250 finish. Unless otherwise shown on the plans, all components of a laminated bearing shall be molded together into an integral unit. Edges of the non-elastic laminations shall be covered by a minimum of 1/8 in. (3 mm) of elastomer except at laminate restraining devices and around holes that shall be entirely closed on the finished structure. Air bubbles within the elastomeric material shall be cause for rejection.

Each bearing pad shall be marked permanently to show the manufacturer and the month and year of fabrication.

(d) Appearance and Dimensions

230 The class for finish and appearance, and flash tolerance, shall be RMA-F3-T.063 for molded bearings and RMA-F2 for extruded bearings in accordance with the requirements of the Rubber Handbook published by the Rubber Manufacturer's Association, Inc.

The permissible variation from the dimensions and configuration required by the plans for both plain and laminated bearings shall be as follows.

	Overall Vertical Dimensions	
	Average Total Thickness 1 1/4 in. (32 mm)	
240	or less	-0, + 1/8 in. (0, +3.2. mm)
	Average Total Thickness Over 1 1/4 in.	
	(32 mm).....	-0, +1/4 in. (0, +6.4 mm)
	Overall Horizontal Dimensions	-1/8 in., +1/4 in. (-3.2 mm, +6.4 mm)
	Thickness of Individual Layers Elastomer	
	(Laminated Bearings	
	Only)	-1/16 in., +1/16 in. (-1.6 mm, +1.6 mm)
	Variations from a Plane Parallel to the Theoretical Surface	
	Top	1/8 in. (3.2 mm)
	Sides	1/4 in. (6.4 mm)
250	Individual Non-Elastic Laminates	
	(as determined by measurements at the	
	edges of the bearing)	1/8 in. (3.2 mm)
	Position of Exposed Connection Members.....	1/8 in. (3.2 mm)
	Edge Cover of Embedded Laminates or	
	Connection Members	-0, +1/8 in. (0, +3.2 mm)
	Size of Holes, Slots, or Inserts.....	-0, +1/8 in. (0, +3.2 mm)
	Position of Holes, Slots, or Inserts.....	-0, +1/8 in. (0, +3.2 mm)
	Thickness of Non-Elastic	
260	Laminates	-1/32 in., +1/16 in. (-0.8 mm, +1.6 mm)

(e) Quality Assurance

The mechanical properties of the finished bearing shall be determined by laboratory test by the manufacturer. The following values shall be used for control of laboratory testing of full size bearings.

1. Compressive strain of any layer of an elastomeric bearing shall not exceed 7% at 800 psi (5.5 MPa) average unit pressure or at the design dead load plus live load pressure if so indicated on the plans.
2. The shear resistance of the bearing shall not exceed 30 psi (207 kPa) for 50 durometer, 40 psi (276 kPa) for 60 durometer, or 50 psi (345 kPa) for 70 durometer, Table A compounds; nor 50 psi

(345 kPa) for 50 durometer, 75 psi (517 kPa) for 60 durometer, or 110 psi (758 kPa) for 70 durometer, Table B compounds at 25% strain of the total effective rubber thickness after an extended four day ambient temperature of -20°F (-29°C). Unless otherwise specified, the shear resistance test will be waived.

280

(f) Certification

Material furnished under this specification shall be covered by a type B certification in accordance with 916. In addition, one bearing pad from each type to be furnished for the structure will be required for laboratory testing. However, when shapes A and B of any type are required, only shape A need be furnished for testing. The material may be sampled prior to shipment to the project, provided suitable arrangements can be made through the Materials and Tests Division. Materials not previously sampled and approved for use shall be sampled after delivery to the project. Samples shall be furnished at least 30 days before date of use.

SECTION 916 – MATERIALS CERTIFICATIONS

916.01 General

Materials certifications will be required for certain materials in accordance with various sections of these specifications and other contract documents. Unless otherwise specified or directed, one copy of each certification shall be submitted prior to use of the material. All certifications shall be signed by a person having legal authority to bind the company preparing the certification.

10

The contract number, name of the Contractor, destination to which the material covered by the certification is consigned, and name and quantity of material represented shall be shown on all copies of the certification. Identifying information such as alloy, grade, type, class, or other similar designation shall also be shown when applicable.

Any material received on the project for which certification has been furnished may be sampled and tested. If the results of the tests are in disagreement with the certification, the test results shall prevail and further acceptance by certification from the manufacturer of the material concerned may be suspended.

20

916.02 Types of Certifications

Certifications shall be type A, type B, type C, type D, or as required under other types. When specified, the type of certification provided for a material shall be in accordance with the Frequency Manual except as otherwise specified. Specific information and test results required in type A, type B, and other types of certifications will be listed in the material specifications. Sample forms for type A, type B, type C, and type D certifications are shown in 916.03. Sample forms for other type certifications are shown in 916.03 or ITM 804.

30 **(a) Type A**

Type A certification shall be prepared by the manufacturer. It shall consist of a certified copy of a laboratory report which lists results of the specified tests and shall certify that the materials furnished comply with the specifications. The applicable specification shall be referred to in the certification. The tests may be conducted in the laboratory of the manufacturer or in another qualified laboratory. Such tests shall have been conducted on samples obtained from the lot or lots of material in the shipment.

40 **(b) Type B**

Type B certification shall be prepared by the manufacturer. It shall show the limits of test values for the specified tests and shall certify that the materials furnished comply with the specifications. The applicable specification shall be referred to in the certification. The tests may be conducted in the laboratory of the manufacturer or in another qualified laboratory.

50 **(c) Type C**

Type C certification shall be prepared by the manufacturer and shall certify that the materials furnished are in accordance with the specifications. The applicable specification shall be referred to in the certification.

50 **(d) Type D**

Type D certification shall be prepared by the Contractor and shall certify that the materials furnished are in accordance with the specifications. The applicable specification shall be referred to in the certification. A type D certification shall be used for product identification. It may be required to certify that the material is in accordance with minimum trade standards.

60 **(e) Other Types**

Types of certifications other than type A, B, C, and D are specified for selected materials. The requirements for a certification are described in the material's specification.

60 **(f) Requirements for Small Quantities of Materials**

Where circumstances warrant and previously approved material is not available, small quantities may be accepted either by a type D certification or by an affidavit from the supplier stating that the material offered is equal to that specified.

70 **(g) Buy American Requirement**

All steel products used in the contract shall be certified to be in accordance with 106.01(c).

916.03 Sample Forms

(a) For Buy American Requirement

BUY AMERICAN CERTIFICATION

In accordance with Indiana Department of Transportation Specification 106.01(c), I hereby certify that all steel products incorporated in Contract No. 80 _____ were produced and manufactured in the United States of America or territories subject to its jurisdiction.

SECTION 917 – QUALITY ASSURANCE AGGREGATE CERTIFICATION

917.01 General Requirements

An aggregate source will be authorized to ship products in the status of a Certified Aggregate Producer who is in accordance with the required standards of

ITM 211. This will consist of a program which will require the aggregate source to make a commitment to product quality management. Approval to participate in the program will be based on the following criteria.

- 10 (a) existence of suitable materials in the deposit being mined;
- (b) facilities capable of consistently processing uniform materials in accordance with the specification requirements; and
- (c) a source Quality Control Plan which will ensure that the mineral aggregates have a 95% assurance of being in accordance with the Department's quality and uniformity requirements.

20 Specific details of this program are contained in ITM 211. Sampling and testing details are found in the Inspection and Sampling Procedures for Fine and Coarse Aggregates manual. A Certified Aggregate Producer shall operate in accordance with the requirements of both publications.

917.02 Quality Control Plan

An aggregate source will not be approved as a Certified Aggregate Producer until it has prepared a Quality Control Plan and the plan has been approved. The plan shall encompass all details of production starting with the extraction of the indigenous raw materials and concluding with material shipped from the plant. The Quality Control Plan shall be prepared in accordance with the requirements of
30 ITM 211.

917.03 Source Approval Requirements

The Materials and Tests Division shall be notified in writing that the aggregate source wants to become a Certified Aggregate Producer. The aggregate source shall identify the specific products for which approval is sought. Such list shall include all of the products to be produced at the source regardless of whether the products are for Department or other uses.

40 An aggregate source may not be considered for entry into the certification program until the preliminary source investigation has been completed in accordance with Indiana Test Method 203.

The following procedure will be used to establish an aggregate source as a Certified Aggregate Producer.

(a) Step 1

The source shall enter the coordinated testing phase of ITM 211. Coordinated testing shall be performed in accordance with ITM 211. During this phase, the producer shall be required to develop a Quality Control Plan to establish
50 demonstrated mean test values and standard deviations.

(b) Step 2

The aggregate source shall enter the trial phase. The producer shall also operate in accordance with ITM 211 and the Quality Control Plan. The Quality Control Plan shall be refined as may be necessary.

(c) Step 3

60 The aggregate source will become an approved Certified Aggregate Producer following satisfactory performance during the trial phase. Achieving such status shall be accompanied by the inherent responsibility to operate within the tenets of ITM 211. The Certified Aggregate Producer shall produce material at a compliance requirement of effectively 95% of the appropriate specifications. The Department will monitor such compliance through the use of periodic in-depth inspections of the production site. Continuing approval is contingent upon the effectiveness of the producer's Quality Control Plan as evidenced by the quality and uniformity of the products which are prepared in accordance with the appropriated specifications and ITM 211.

917.04 Removal from Certified Producer Status

70 The Materials and Tests Division will be responsible for the review and removal of an aggregate source from being an approved Certified Aggregate Producer. A Certified Aggregate Producer shall operate so as to avoid a need for the Department to exercise this action. However, removal from Certified Aggregate Producer status may be necessary for situations such as:

- (a) the statistical probability of the product compliance has fallen below 90%;
- 80 (b) the product has a 90% to 95% probability of compliance but the producer has failed to take corrective action to restore 95% probability;
- (c) the Certified Aggregate Producer has failed to take immediate corrective action relative to deficiencies in the performance of the approved Quality Control Plan;
- (d) evaluation of data has demonstrated an inability of the Certified Aggregate Producer to consistently be in accordance with Department requirements;
- 90 (e) the Certified Aggregate Producer has deliberately shipped aggregate material which is not in accordance with the specifications, or has falsified records; or
- (f) the production site has not been operated in accordance with the Summary of Production or Ledge Quality Results letter.

Notice of removal from Certified status will be in written form, will be issued by the Materials and Tests Division, and will identify the reasons for the removal. Effective immediately upon receipt of such notification, no further aggregate shipments shall be made on a certified basis.

917.05 Appeals

The producer shall have the right to appeal removal from Certified Producer status to the Engineer. The appeal shall be in written form, shall state the reason or reasons on which the appeal is based, and shall be received within 14 calendar days of receipt of the removal notice.

SECTION 918 – SOIL FABRICS

918.01 Fabric for Waterproofing

Fabric for waterproofing shall be treated cotton in accordance with AASHTO M 117, woven glass in accordance with ASTM D 1668, or glass fiber mat in accordance with ASTM D 2178. Material furnished under this specification shall be covered by a type C certification in accordance with 916.

918.02 Geotextile for Use Under Riprap

10 The material used shall consist of a non-woven geotextile consisting of strong, rot resistant, chemically stable long-chain synthetic polymer material dimensionally stable with distinct and measurable openings. The plastic yarn or fibers used in the geotextile, shall consist of any long-chain synthetic polymer composed of at least 85% by weight of polyolefins, polyesters, or polyamides, and shall contain stabilizers and inhibitors added to the base plastic to make the filaments resistant to deterioration due to ultraviolet and heat exposure. The geotextile shall be calendared or otherwise finished so that the yarns or fibers will retain their relative position with respect to each other. Silt film geotextiles will not be permitted unless approved.

20 The geotextile shall meet the following physical requirements.

GEOTEXTILE MATERIAL PROPERTIES

TEST	METHOD	REQUIREMENTS*
Tensile Strength	Grab Tensile Strength, ASTM D 4632	200 lb (890 N)
Elongation	Grab Tensile Strength, ASTM D 4632	15%
Seam Strength	Grab Tensile Strength, ASTM D 4632	180 lb (800 N)
Puncture Strength	ASTM D 4833	80 lb (356 N)
Trapezoid Tear	ASTM C 4533	50 lb (225 N)
Ultraviolet Degradation at 150 h	ASTM D 4355	70% strength retained
Apparent Opening Size (AOS)	ASTM D 4751	AOS shall be No. 50 (300 μ m) standard sieve or filter
Permeability**	ASTM D 4491 (Permittivity)	0.01 cm/sec or >
<p>* Use value in weaker principal direction. All numerical values represent minimum average roll value and test results from any sampled roll in a lot shall meet or exceed the minimum values in the table. Lots shall be sampled according to ASTM D 4354.</p> <p>** The nominal coefficient of permeability shall be determined by multiplying permittivity value by nominal thickness. The nominal thickness is measured under a normal load of 280 psi (1.93 MPa).</p>		

The geotextiles to be used will be selected from the list of approved Geotextiles for Use Under Riprap.

30 A manufacturer, requesting that a geotextile be added to the approved list, shall provide a certification documenting compliance with the above requirements and a sample to the Materials and Tests Division. The certification shall be prepared by the manufacturer which addresses all the required information as shown on a sample certification form in ITM 804. No relabeled materials will be considered for approval. A specified material on the approved list will not be listed under more than one name.

When it is determined the material is acceptable, it will be added to the list of approved Geotextiles for Use Under Riprap and it may be used upon publication of the list.

918.03 Geotextile for Use With Underdrains

40 This material shall consist of a non-woven needle punched or heat bonded geotextile consisting of strong, rot resistant, chemically stable long-chain synthetic polymer materials, which are dimensionally stable relative to each other including selvages. The plastic yarn or fibers used in the geotextile shall consist of at least 85% by weight of polyolefins, polyesters, or polyamides. The plastic yarn or fibers

shall have stabilizers and inhibitors added to the base plastic to make the filaments resistant to deterioration due to ultraviolet and heat exposure.

The geotextile shall be in accordance with the physical requirements as follows.

TEST	METHOD	REQUIREMENTS ²
Grab Strength	ASTM D 4632	80 lb (355.8 N)
Seam Strength ¹	ASTM D 4632	70 lb (311.4 N)
Puncture Strength	ASTM D 4833	25 lb (111.2 N)
Trapezoid Tear	ASTM D 4533	25 lb (111.2 kg)
Apparent Opening Size (AOS)	ASTM D 4751	Sieve No. 50 or smaller opening
Permeability	ASTM D 4491	0.1 mm/sec
Ultraviolet Degradation at 150 h	ASTM D 4355	70% strength retained
1 Values will apply to both filed and manufactured seams. 2 The value in the weaker principal direction shall be used. All numerical values will represent the minimum average roll value. Test results from a sampled roll in a lot shall be in accordance with or shall exceed the minimum values shown in the table. Lots shall be sampled in accordance with ASTM D 4354.		

50

The geotextiles to be used shall be selected from the list of approved Geotextiles for Use With Underdrains.

Requests for adding geotextiles to the approved list shall be supported by a certification documenting compliance with the above requirements and a sample. The certification shall be prepared by the manufacturer in accordance with the applicable requirements of 916. No relabeled materials will be considered for approval. A specified material on the approved list will not be listed under more than one name. When it is determined the material is acceptable, it will be added to the

60

list of approved Geotextiles for Use with Underdrains and it may be used upon publication of the list.

A manufacturer, requesting that a geotextile be added to the approved list, shall provide a certification documenting compliance with the above requirements and a sample to the Materials and Tests Division. The certification shall be prepared by the manufacturer in accordance with 916. No relabeled materials will be considered for approval. A specified material on the approved list will not be listed under more than one name. When it is determined the material is acceptable, it will be added to the list of approved Geotextiles for Use with Underdrains and it may be used upon

70

918.04 Geotextile for Silt Fence

The silt fence fabric shall consist of a woven or non-woven geotextile consisting of strong, rot resistant, chemically stable long-chain synthetic polymer materials, which are dimensionally stable relative to each other including selvages. The plastic yarn or fibers used in the geotextile shall consist of at least 85% by weight of polyolefins, polyesters, or polyamides. The plastic yarn or fibers shall have

918.05

stabilizers and inhibitors added to the base plastic to make the filaments resistant to deterioration due to ultraviolet and heat exposure.

80

The geotextile shall be in accordance with the guidelines of AASHTO-AGC-ARTBA, Task Force 25 and AASHTO M 288.

The geotextile shall be in accordance with the physical requirements as follows.

TEST	METHOD	REQUIREMENTS ¹	
		Wire Fence Supported	Self Supported
Grab Strength	ASTM D 4632	90 lb (41 kg)	90 lb (41 kg)
Elongation at 45 lb (20 kg)	ASTM D 4632		50% Max.
Apparent Opening Size ²	ASTM D 4751	No. 20 (0.84 mm)	No. 20 (0.84 mm)
Permittivity ²	ASTM D 4491	0.01 sec ⁻¹	0.01 sec ⁻¹
Ultraviolet Degradation at 500 h	ASTM D 4355	70% strength retained	70% strength retained
<p>1. The value in the weaker principal direction shall be used. All numerical values will represent the minimum average roll value. Test results from a sampled roll in a lot shall be in accordance with or shall exceed the minimum values shown in the above table. The stated values are for non-critical, non-severe conditions. Lots shall be sampled in accordance with ASTM D 4354.</p> <p>2. The values reflect the minimum criteria currently used. Performance tests may be used to evaluate silt fence performance if deemed necessary by the Engineer.</p>			

Material furnished under this specification shall be covered by the type of certification specified in the Frequency Manual and in accordance with 916.

90

918.05 Geogrid

Geogrid shall be on a regular network of integrally connected polymer tensile elements with aperture geometry sufficient to permit significant mechanical interlock with the surrounding material. The geogrid structure shall be dimensionally stable and shall be able to retain its geometry under construction stresses. The geogrid structure shall have a resistance to damage during construction, ultraviolet degradation, and all forms of chemical and biological degradation encountered in the soil being placed on.

100 Geogrid shall be in accordance with the property requirements as specified in the Geosynthetic Research Institute Standard Test Methods GG1, GG3, GG4, and ASTM D 5262.

During periods of shipment and storage, the geogrid shall be protected from temperatures greater than 140°F (60°C), mud, dirt, dust, and debris. Each geogrid roll shall be labeled or tagged to provide product identification. The manufacturer's recommendations shall be followed with regard to protection from direct sunlight. At the time of installation, the geogrid will be rejected if it has defects, tears, punctures,

flaws, deterioration, or damage incurred during manufacture, transportation, or storage. All damaged portions of geogrid for the entire width shall be replaced.

110

Only geogrids selected from the Department's list of approved Geogrids shall be used. Geogrids will be placed and maintained on the Department's list in accordance with ITM 806, procedure P. No relabeled materials will be considered for approval. A specified material shown on the approved list will not be listed under more than one name.

The geogrid shall be in accordance with the property requirements for the type specified as follows.

120

(a) Type I

PROPERTY	TEST METHOD	UNIT	VALUE, Min.
Aperture	Calibered	in. (mm)	0.5 x 0.5 (13 x 13)
Open Area	COE, CWO2215	percent	> 50.0, ≤ 80.0
Tensile Modulus, machine direction	GRI, GG1 ^{1,3,4}	lb/ft (N/m)	10,000 (146 000)
cross machine direction	GRI, GG1 ^{1,3,4}	lb/ft (N/m)	10,000 (146 000)
Ultimate Strength, machine direction	GRI, GG1 ^{2,3,4}	lb/ft (N/m)	800 (11 670)
cross machine direction	GRI, GG1 ^{2,3,4}	lb/ft (N/m)	800 (11 670)
1. Secant modulus at 5% elongation measured by Geosynthetic Research Institute Test Method GG1, Geogrid Tensile Strength. No offset allowance shall be made in calculating secant modulus. 2. Ultimate strength measured by Geosynthetic Research Institute Test Method GG1, Geogrid Tensile Strength. 3. Results for machine direction, MD, and cross machine direction, CMD, are required. 4. Minimum average roll values shall be in accordance with ASTM D 4759.			

(b) Type II

PROPERTY	TEST METHOD	UNIT	VALUE, Min.
Open Area	COE, CWO2215	percent	> 50.0, ≤ 80.0
Tensile Modulus, machine direction	GRI, GG1 ^{1,4}	lb/ft (N/m)	49,300 (720 000)
Creep Limited Strength, machine direction at 5% strain	GRI, GG3 ^{2,3} -87 or ASTM D 5262	lb/ft (N/m)	1090 (16 000)
1. Secant modulus at 2% elongation measured by Geosynthetic Research Institute Test Method GG1, Geogrid Tensile Strength. No offset allowance shall be made in calculating secant modulus. 2. Long term load capacity measured by through the junction tensile creep testing to 10,000 hours in accordance with Geosynthetic Research Institute Test Method GG3, Creep Behavior and Long Term. 3. The Long Term allowable design strength, LTADS, is determined in accordance with GR1-GG4, Determination of the Long Term Design Strength of Stiff Geogrids. 4. Minimum average roll values shall be in accordance with ASTM D 4759.			

SECTION 919 – TRAFFIC SIGNS**919.01 Traffic Signs**

Traffic signs shall be in accordance with the MUTCD.

Panel sign fabrication shall not utilize overlapping or butt splicing of reflective sheeting. Roll splices, as supplied on the roll of sheeting by the sheeting manufacturer, are permitted subject to the following conditions.

10 (a) a maximum of one roll splice per panel, and

(b) a maximum of three roll splices per sign.

Exit panels are considered a part of the signs to which they are attached when fabricated under the same contract. If the exit panels are made for separate installation, only one roll splice is permitted on the entire sign.

20 Overlap splices on sheet signs will be permitted only because of insufficient sheeting width on signs whose smaller dimension exceeds 48 in. (1220 mm). The overlap splice shall be installed in a shingle type manner using a horizontal lap. The lap width shall be a minimum of 1/4 in. (6 mm). Butt splices shall not be used. Roll splices are permitted on sheet signs but shall not exceed one splice per sign.

All signs shall be packed for shipment and handled during construction in accordance with the manufacturer's recommendations. All sign or sign face damaged prior to acceptance shall be replaced or repaired. Damaged sheet signs shall be replaced in their entirety. Damaged panel signs shall have the affected panels replaced or repaired in accordance with the manufacturer's recommendations.

30 Repaired areas on panel signs shall not be larger than 3 in. by 3 in. (75 mm by 75 mm). Repaired areas 1 in. by 1 in. (25 mm by 25 mm) or less shall be limited to a maximum of three per panel and a maximum of six per panel sign. Repaired areas larger than 1 in. by 1 in. (25 mm by 25 mm) shall be limited to one per panel and a maximum of three per panel sign. The maximum number of repaired areas shall be three on a panel or six on a panel sign. No more than 20% of the total number of panel signs may be patched. Panels with sheeting cracked at the bend around the panel edge shall be replaced.

40 A sign with the metal face damaged greater than superficial deformation shall be replaced.

(a) Backing Material

Fabrication, including cutting and punching of holes but excluding holes for demountable copy, shall be completed prior to surface treatment. Material shall be cut to size and shape and shall be free from buckles, warp, dents, cockles, burrs, and defects resulting from fabrication. The surface shall be a plane surface.

50 Metal sign base material shall be cleaned and prepared to receive the sheeting material in accordance with the sheeting manufacturer's recommendation.

1. Sheet Signs

The backing material for permanent sheet signs shall be sheet aluminum in accordance with ASTM B 209 (B 209M), alloy 5052H38, or alloy 6061-T6.

The minimum thickness of the sheet shall be as shown for the appropriate sign width.

Width, in. (mm)	Thickness, in. (mm)
Up to 30 (750)	0.080 (2.00)
31 to 60 (775 to 1500)	0.100 (2.50)
61 (1525) and Over	0.125 (3.20)

60 Backing material for temporary ground mounted signs shall be aluminum, steel, fiberglass, reinforced plastic, or plywood, unless otherwise approved.

2. Panel Signs

Extruded aluminum panels shall be in accordance with ASTM B 221 (B 221M), alloy 6063-T6, and be 12 in. (300 mm) in width. Extruded aluminum panels shall be flat and straight within tolerances established by the aluminum industry. The weight (mass) for panels shall be 2.48 lb/ft (3.70 kg/m).

70 Trim molding shall be of the same material and thickness as the panels to which it is attached.

Panel bolts, flat washers, and lock-nuts shall be in accordance with ASTM B 211 (B 211M), alloy 2024-T4. Panel bolts shall be 3/8 in. by 3/4 in. (10 mm by 19 mm) standard hex head. Lock-nuts shall be standard hex head.

3. Demountable Letters, Numbers, and Symbols

Backing material for letters, numbers, and symbols shall be 0.040 in. (1.0 mm) thick aluminum sheets in accordance with ASTM B 209 (B 209M), alloy 3003-H14. Borders shall be 0.032 in. (0.8 mm) thick aluminum sheet in accordance with ASTM B 209 (B 209M), alloy 6061-T6.

80

(b) Sheeting Material

Only sheeting materials from the Department's list of approved Sign Sheeting Materials shall be used. Sheeting materials will be placed and maintained on the Department's approved list in accordance with ITM 806, procedure G.

1. Reflective Sheeting

Reflective sheeting used for signs, channelizing and delineation devices shall be in accordance with AASHTO M 268. Type V reflective sheeting may be used on delineators. Reboundable reflective sheeting shall be used on plastic drums, flexible delineator posts, and other flexible channelizers.

The color chromaticity specifications limits, and the minimum reflective intensity values for fluorescent yellow, fluorescent yellow green, and fluorescent orange reflective sheeting materials shall be in accordance with the following tables.

COLOR SPECIFICATIONS LIMITS AND REFERENCE STANDARDS FOR
FLUORESCNET REFLECTIVE SHEETING MATERIAL

	Chromaticity Coordinates							
	1		2		3		4	
	x	y	x	y	x	y	x	y
Fluorescent Orange	0.583	0.416	0.535	0.400	0.595	0.351	0.645	0.355
Fluorescent Yellow	0.479	0.520	0.446	0.483	0.512	0.421	0.557	0.442
Fluorescent Yellow/Green	0.387	0.610	0.369	0.546	0.428	0.496	0.460	0.540

100

DAYTIME LUMINANCE FACTORS FOR FLUORESCENT REFLECTIVE
SHEETING MATERIAL

	Luminance Factor Limits (Y)		
	Min	Max	YF
Fluorescent Orange	25	None	15
Fluorescent Yellow	45	None	20
Fluorescent Yellow/Green	60	None	20

**MINIMUM REFLECTIVE INTENSITY VALUES FOR FLUORESCENT
REFLECTIVE SHEETING MATERIAL**

Observation Angle	Entrance Angle	Fluorescent Orange	Fluorescent Yellow	Fluorescent Yellow/Green
0.2	-4.0	200	240	325
0.2	30.0	85	150	200
0.5	-4.0	80	165	175
0.5	30.0	32	75	70

The reflective sheeting shall include an adhesive backing Class 1 or Class 2 in accordance with AASHTO M 268.

2. Non-reflective Sheeting

- 110 Non-reflective sheeting shall be in accordance with AASHTO M 268 except that the sheeting shall not incorporate optical elements. The color shall be black in accordance with Federal Standard 595a, Color No. 17038.

3. Transparent Sheeting

Transparent sheeting shall be a material recommended by the background sheeting manufacturer.

(c) Letters, Numbers, Symbols, and Accessories

Letters, numbers, symbols, and accessories shall be demountable.

- 120 The reflective sheeting shall be of the same type as used on the background and mechanically applied to the properly prepared aluminum in a manner prescribed by the sheeting manufacturer.

Each demountable legend unit, supplemental panel, and border frame shall be supplied with mounting holes and shall be secured to the sign face with aluminum rivets with aluminum mandrels. Adhesives that, when removed, may damage the sign face, legend unit, or border shall not be used to hold the unit in place.

- 130 Completed demountable units shall be dipped coated with a high gloss clear finish coat as specified by the sheeting manufacturer. The finished units shall be clean cut, sharp, and have essentially a plane surface.

(d) Fasteners

1. Sheet Signs

- 140 The bolts, steel flat washers, and lock-nuts used to attach sheet signs to posts shall be stainless steel in accordance with ASTM A 276, or type 304 carbon steel in accordance with ASTM A 307, grade A. Carbon steel hardware shall be galvanized in accordance with ASTM A 153. Lock washers and hex nuts shall be used in lieu of the lock-nuts when carbon steel hardware is furnished.

920.01

The bolts shall be 5/16 in. by 3 in. (8 mm by 75 mm) hex head, full threaded. The steel flat washers shall be size no. 1/4, 0.738 in. (19 mm) outside diameter, 0.317 in. (8.1 mm) inside diameter, and 0.051 to 0.08 in. (1.2 to 2.0 mm) thick and in accordance with Military Specifications MS 15795-811. Nylon flat washers shall be 7/8 in. (22 mm) outside diameter, 0.317 in. (8.1 mm) inside diameter, and shall be 0.032 in. (0.81 mm) thick.

2. Panel Signs and Temporary Panel Signs

- 150 The aluminum post clips shall be in accordance with ASTM B 26 (B 26M) or ASTM B 108 (B 108M), alloy 356.0-T6 and as shown on the plans. Aluminum post clip bolts shall be as shown on the plans and in accordance with ASTM B 211 (B 211M), alloy 2024-T4. Lock-nuts shall be in accordance with ASTM B 211 (B 211M), alloy 2017-T4. Flat washers shall be in accordance with ASTM B 209 (B 209M), alloy Alclad 2024-T4.

3. Aluminum Rivets

- 160 Aluminum rivets shall be determined by character size and shape but shall not be more than 8 in. (200 mm) on center. All rivets shall be color matched to the legend or supplemental panel being installed.

(e) Basis for Use

Materials furnished under this specification, except those used for temporary construction signs, temporary traffic signs, and temporary panel signs, shall be covered by a type C certification in accordance with 916.

SECTION 920 – HIGHWAY ILLUMINATION MATERIALS

920.01 Highway Illumination Materials

All luminaires, lamps, fuse kits, wire and cable, and major equipment shall be approved new material bearing the UL seal of approval or meet their standards.

Descriptive and technical literature shall be furnished for approval on all equipment prior to purchase and incorporation into the work.

- 10 Warranties for all major equipment shall be in accordance with 807.03.

(a) Lighting Standards and Mast Arms, under 80 ft (24.4 m)

1. General Requirements

Conventional lighting standards shall be aluminum or steel and shall be in accordance with AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals.

- 20 For conventional light standards, design wind velocity shall be 80 mph (1.30 km/hr). The maximum horizontal deflection of the pole under maximum loading conditions shall not exceed a deflection angle of one degree and 10 min from

the vertical axis of the pole for any 1.0 ft (0.3 m) section of the pole along the entire length of the pole. The maximum stress shall be 80% of the AASHTO Standard Specifications for Group I-DL loads. Vibration dampers shall be furnished as recommended by the manufacturer. The manufacturer may use drag coefficients based on actual wind tunnel tests; otherwise, they shall use the drag coefficients in Table 1.2.5c of Group I loads.

- 30 Conventional light standards shall be designed to support a 53 lb (24 kg) luminaire with an effective area of 2.4 ft² (0.22 m²). When larger luminaires are specified, the light standards shall be designed to support the larger luminaires and this shall be shown on the light standard shop drawings.

- 40 Conventional poles shall have a 4 in. by 8 in. (100 mm by 200 mm) reinforced handhole centered 18 in. (460 mm) above the base of the pole and a cover attached with a minimum of two stainless steel hex head bolts. The pole shall have a removable pole cap and a wire support hook to support the vertical drop of the wire by a service drop clamp attached to the cable. A wiring hole with a 1 in. (25 mm) inside diameter grommet shall be provided where the arm is attached. Pole bases shall be designed for mounting on anchor bolts equally spaced on an 11 1/2 in. (292 mm) or 14 1/2 in. (368 mm) diameter anchor bolt circle. Anchor bolt covers shall be furnished.

Hardware shall be type 304 or 305 stainless steel in accordance with ASTM A 276, except where otherwise specified.

- 50 For conventional poles, a 1/2 in. (13 mm) by 13 UNC threaded grounding nut or other approved method shall be provided near the bottom of and shall be accessible through the handhole for attaching the ground wire. The ground wire shall be No. 6 AWG soft-drawn, solid copper in accordance with ASTM B 3.

- 60 Mast arms less than 8 ft (2.4 m) in length shall either be single member or truss type, except that mast arms on bridge deck light standards shall be truss type. Single member arms shall be a tapered tube oval shaped at the pole end with the long dimension in the vertical plane, welded to a pole plate and bolted or clamped to the shaft with a minimum of four 1/2 in. (13 mm) bolts. Mast arms 8 ft (2.4 m) and over in length shall be truss type. The upper member shall be a tapered tube oval shaped at the pole with the long dimension in the horizontal plane. The lower member may be standard pipe. Both members shall be welded to a pole plate and bolted or clamped to the pole. A minimum of four 1/2 in. (13 mm) bolts at the upper member and a minimum of two 3/8 in. (10 mm) bolts at the lower member shall be used if a pole plate configuration is used to attach the mast arm to the pole. Mast arms that are clamped to the pole shall have a minimum of four 1/2 in. (13 mm) bolts per clamp. Mast arms shall provide an enclosed raceway for the wiring and shall be free of burrs and rough edges. Each arm shall be furnished with a 2 in. (50 mm) nominal pipe size slipfitter. The maximum rise of the truss style arm shall be as set out in the table and

920.01

shall be measured vertically from the centerline of the free end of the truss to a plane through the centerline of the upper arm bracket after loading.

MAST ARM LENGTH ft (m)	MAXIMUM RISE ft (m)
9 (27) or less	4 (1.2)
10 to 14 (3 to 4.3)	5 (1.5)
15 to 19 (4.5 to 5.8)	5.5 (1.7)
20 to 25 (6.1 to 7.6)	6 (1.8)
26 to 30 (7.9 to 9.1)	8 (2.4)

70

Light standards shall be constructed to provide a nominal luminaire mounting height above the roadway pavement as shown on the drawings. The elevations of foundations above or below the edge of the pavement shall be controlled by existing roadside conditions. The proper shaft length shall be determined by field measurement prior to placing an order for the poles.

A variation in the nominal mounting height of ± 1 ft (0.3 m) is permitted so that the “Effective Mounting Height”, foundation to luminaire, of the light standards may be supplied for 40 ft (12.2 m) nominal mounting height.

80

Elevation of Foundation Top with Respect to the Near Road Edge ft (m)	Effective Mounting Height, Foundation to Luminaire ft (m)
+7.00 to +5.01 (2.13 to 1.53)	34 (10.4)
+5.00 to +3.01 (1.52 to 0.92)	36 (11.0)
+3.00 to +1.01 (0.91 to 0.031)	38 (11.6)
+1.00 to -1.00 (+0.30 to -0.30)	40 (12.2)
-1.01 to -3.0 (-0.31 to -0.91)	42 (12.8)
-3.01 to -5.00 (-0.92 to -1.52)	44 (13.4)
-5.01 to -7.00 (-1.53 to -2.13)	46 (14.0)

The effective mounting heights for other nominal mounting heights deviate from the table by the difference in the nominal heights.

2. Aluminum Lighting Standards

a. Round Seamless

The pole and mast arm shall be in accordance with ASTM B 241 (B 241M), alloy 6063-T4, and of sufficient diameter and wall thickness to withstand the design loads. The pole shall be tapered full length or tapered in the middle with the top and/or bottom approximately 1/3 of the pole of constant cross section. The minimum wall thickness for poles on breakaway couplings and steel slip bases shall be 0.219 in. (5.6 mm). Poles on transformer bases or shoe anchor bases installed without breakaway devices are exempted from this minimum wall thickness requirement. An inner tube extension, or sleeve, fitted inside the main tube shaft, is

90

permissible to increase the wall thickness of the shaft starting at the bottom of the shoe base and extending upward towards the top of the pole. The sleeve or tube extension shall be no less than 3 ft (0.9 m) in length, fabricated from aluminum alloy 6063-T4 and heat treated to produce a T6 temper after placing in the shaft. The minimum wall thickness of the combination of shaft and sleeve shall be 0.219 in. (5.6 mm). Attaching plates or clamps for aluminum mast arms shall be in accordance with ASTM B 241 (B 241M), alloys 6061-T6, 6063-T6, 356.0-T6, or 5052-H32. The bottom end of the shaft shall be welded to a one piece cast aluminum shoe anchor base of 356.0-T6 aluminum alloy in accordance with ASTM B 26 (B 26M) for sand castings or ASTM B 108 for permanent mold castings or equal and provided with four slotted holes for anchor bolts and the shaft's full length shall be heat treated to produce a T6 temper. The top of the shaft shall be provided with a removable aluminum pole cap. The shaft shall have no longitudinal welds. After fabrication, the shaft shall be cleaned to a satin finish and wrapped for protection during shipping and handling.

b. Single Longitudinal Welded

The material for these lighting standards shall be round, tapered structural marine aluminum sheet in accordance with ASTM B 209 (B 209M), alloy 5086-H34, and of sufficient diameter and wall thickness to withstand the design loads. The minimum wall thickness for poles on breakaway couplings and steel slip bases shall be 0.219 in. (5.6 mm). Poles on transformer bases or shoe anchor bases installed with no breakaway devices are exempted from the minimum wall thickness requirement. The anchor base shall be one piece cast aluminum in accordance with ASTM B 26 (B 26M), alloy 356.0-T6. The base casting for the formed and welded shaft shall be designed to be inserted a minimum of 12 in. (300 mm) into the shaft and bonded to the shaft with a weatherproof structural epoxy adhesive that fully develops the required strength as specified by the design criteria. After fabrication, the shaft shall be cleaned to a satin finish and wrapped for protection during shipping and handling.

3. Stainless Steel Lighting Standards

Stainless steel lighting standards shall be fabricated from stainless steel in accordance with ASTM A 666, type 201, that has a minimum yield point of 68,000 psi (469 MPa). Welds other than spot welds shall be performed with conventional welding equipment and with stainless steel welding rods. Welds shall be free of cracks and pores. The wall thickness and diameter of the pole shall be sufficient to withstand designed loads. Exposed surfaces of the standard shall be smooth and free from marks or imperfections. During shipment, the poles and mast arms shall be protected with a non-staining protective material to preserve the finish.

4. Galvanized Steel Lighting Standards

The pole and base plate shall be fabricated from steel in accordance with ASTM A 572 (A 572M) A 595, or A 1011 with a minimum yield strength of 50,000 psi (345 MPa). Single member mast arms and the upper members of truss type mast arms shall be fabricated from steel in accordance with ASTM A 572 (A 572M) or A 595 with a minimum yield strength of 50,000 psi (345 MPa). The lower member

920.01

of truss type arms may be fabricated from standard steel pipe in accordance with ASTM A 53 with a minimum yield strength of 36,000 psi (250 MPa). After fabrication, the pole and mast arm shall be thoroughly cleaned and galvanized in accordance with ASTM A 123.

150 Steel standards shall be tapered 0.14 in./ft (11.67 mm/m) and shall be round, octagonal, or dodecagonal. The design load shall be used to determine the pole diameter and wall thickness. The pole shall have one longitudinal electrically welded joint. A steel base plate shall be welded to each pole and provided with 4 slotted holes for the anchor bolts.

All welds on steel standards shall be performed at the factory. Base plate welds shall be 100% penetration. Circumferential welds shall be backed-up welds with 100% penetration. Longitudinal welds shall be a minimum of 60% penetration. The 100% penetration welds shall be ultrasonically inspected and all other welds shall be inspected by magnetic particle. Welding shall be performed in accordance with 711.32.

160 **5. Wood Pole Lighting Standards**

Wood poles for highway lighting standards shall be in accordance with 922.05(b).

6. Frangible Breakaway Bases

All light standards, except high mast towers and those protected by bridge end bents or retaining walls, shall be installed on breakaway devices. All breakaway devices on a contract shall be of the same type and manufacturer.

170 Breakaway devices shall be in accordance with AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals as modified in 920.01(a)1.

A certification from the manufacturer shall be furnished with the shop drawings stating the breakaway devices conform to the breakaway criteria of the AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals.

a. Cast Aluminum Transformer Base

180 The anchor bolts for transformer bases shall be in accordance with 920.01(a)7. The anchor bolt circle for transformer bases shall be 15 in. (381 mm). The bolt holes in the transformer base may be slotted. The pole shall be bolted to the transformer base with four 1 in. (25 mm) diameter galvanized steel bolts.

An approved handhole in the transformer base may be substituted for the 4 in. by 8 in. (100 mm by 200 mm) handhole specified in 920.01(a)1.

b. Breakaway Coupling

Breakaway couplings may be used with aluminum poles with mounting heights up to 50 ft (15 m) and with steel poles that weigh 600 lb (272 kg) or less. The couplings shall be furnished with necessary hardware including a two piece cover. Couplings shall be installed in accordance with the manufacturer's instructions and recommended clearance between the top of the foundation and the bottom of the breakaway coupling.

7. Anchor Bolts

Anchor bolts shall be 1 in. (25 mm) with 8NC rolled threads in accordance with ASTM A 307. The minimum length of threads shall be 6 in. (150 mm). Mean diameter of rod stock shall be 0.918 in. \pm 0.011 in. (23.32 mm \pm 0.28 mm) and out-of-round tolerance shall be \pm 0.012 in. (0.3 mm). The top 10 in. (254 mm) of the bolt shall be galvanized in accordance with ASTM A 153. Anchor bolts shall be in accordance with 910.19(b). The bolts shall be a minimum of 36 in. (914 mm) in length for poles 8 in. (200 mm) outside diameter or less and 48 in. (1.22 m) in length for poles 9 in. (230 mm) or 10 in. (254 mm) outside diameter. In addition to the minimum length, the bolt shall have a 4 in. (100 mm) right angle bend at the unthreaded end. The anchor bolts in bridge structures shall be as shown on the plans.

(b) High Mast Standards of 80 ft (24.5 m) and Over

The high mast pole, base, anchor bolts, lowering device, installed fixtures, and associated appurtenances shall be designed to withstand a minimum wind speed of 90 mph (155 km/h), gust of 117 mph (188 km/h), using applicable design criteria in accordance with AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals. Minimum design criteria for each fixture shall be an effective projected area of 2.8 ft² (0.26 m²) and a weight of 85 lb (38.6 kg). If larger fixtures are used, the actual size and weight shall be used in the design of the pole.

The Contractor shall be responsible for the accuracy of the dimensions and the proper fit of all material and equipment furnished with the pole. The Contractor shall provide all applicable manufacturer's warranties for material and workmanship. External lowering devices shall be designed to attach to the pole as shown on the plans. The pole shall include the mounting accommodations as shown on the plans.

1. High Mast Poles

The poles shall be made of steel in accordance with ASTM A 871 (A 871M). The steel shall have a minimum yield strength of 59,500 psi (410 MPa).

All steel used in the base plate and shaft shall meet an impact property of 15 ft·lbs (20.3 J) at 40°F (4.5°C) in the longitudinal direction using the Charpy V-Notch test. This shall be an average of 3 tests per mill heat with no test below 10 ft·lbs (13.6 J). A copy of the certified mill test reports for this steel and the Charpy V-Notch test results shall be submitted. Sufficient information shall be

furnished to demonstrate that this material is traceable to the mill heat number shown on the test report.

The tapered pole shall be multi-sided or circular in shape. The pole shaft sections shall be welded together or slipfitted. The minimum diameter of the pole top shall be 7.5 in. (190 mm) and shall provide at least 1 in. (25 mm) radial clearance from all interior devices.

- 240 The exterior of the pole shall be thoroughly shotblasted or otherwise cleaned to a near white finish to remove all oily and foreign matter. The interior of the pole shall be cleaned of all mill scale and foreign matter by a pickling process or shotblasting.

Hardware shall be stainless steel in accordance with ASTM A 276, type 304 or 305, except where otherwise specified.

- 250 For the slipfit design, the pole shall be made up of not more than four sections for poles up to and including 120 ft (36.6 m) in length. For the poles between 120 ft (36.6 m) and 150 ft (45.7 m), five sections will be permitted. For poles over 150 ft (45.7 m) and up to 200 ft (61 m), six sections will be permitted. The inside edge of the lower section of the slip joint shall be beveled to prevent the transition joint assembly from catching on the edge. Slip joints shall have a minimum overlap of 1 1/2 times the diameter of the bottom of the upper section. The sections shall be pre-fitted and matchmarked at the factory.

2. Welding

- 260 All welds shall be performed at the factory. Circumferential welds shall be backed-up welds with 100% penetration. Longitudinal welds shall have a minimum of 60% penetration except within 2 ft (0.6 m) of either side of the circumferential joint, the welds shall be backed-up and of 100% penetration. Base plate welds shall be 100% penetration. Circumferential welds and 100% penetration longitudinal welds shall be 100% ultrasonically inspected. The 60% penetration longitudinal welds shall be 100% ultrasonically or radiographically inspected for soundness. Welding shall be performed in accordance with 711.32.

3. Handholes

- 270 Openings for handholes shall be reinforced to maintain the design strength of the pole. The handhole shall have a weatherproof gasket made of neoprene or silicone rubber. The gasket shall be formed for a forced fit around the handhole or be attached by mechanical means. Samples of the gaskets shall be furnished for approval. The door and hinges shall be the same type steel as the poles. The hinge pins and other securing hardware shall be stainless steel and tamperproof. The door shall be fabricated to allow for a padlock, which is not included in the hardware. The hasp used for padlocking shall be fabricated from stainless steel. Provisions shall be made to bolt the door securely shut. The door shall include a bugproof and weatherproof aperture with a minimum opening of 4 in.² (2580 mm²). Nylon or

non-corrosive screens, or other approved methods of bugproofing shall be furnished. Two bonding plates shall be furnished which are accessible through the pole
 280 handhole for connecting the ground wires. A connection shall be furnished for an additional ground wire on the outside of the pole near the base plate.

4. Luminaire Ring Assembly

The ring shall be fabricated from ASTM A 666 Type 201 or 304 stainless steel and shall have a removable raceway cover. The ring shall be designed as an enclosed wire raceway to provide for the symmetrical mounting of luminaires having an effective projected area of 2.8 ft² (0.26 m²) and a weight of 85 lb (38.5 kg) or actual projected area and weight, if greater. All structural connections shall be made with
 290 bolts and nuts.

The luminaire ring shall be supported by three 3/16 in. (5 mm) stainless steel aircraft cables of seven strands with 19 wires each strand with a minimum breaking strength of 3900 lb (17 350 N). The cables shall be secured to the ring, and to cable terminating devices within the poles by means of stainless steel hardware.

Positive positioning devices shall be incorporated into the ring assembly. These devices shall be designed to prevent any horizontal movement in the ring assembly. The ring assembly shall have a minimum of six non-abrasive rollers mounted on the ring interior.
 300

5. Head Frame Assembly

The head frame shall be made of ASTM A 666 Type 201 or 304 stainless steel. All required pulleys, rollers, or sheaves and shafts shall be constructed from non-corrosive metallic materials. No component shall be used in the lowering device in excess of its rating or in violation of the component manufacturer's recommendation. This requirement shall be applicable, but not limited to, the compatibility of the cables and sheaves. There shall be three supports for the suspension cables. A roller system or one compatible sheave for the power cable shall be located mid-point between two of the suspension supports. To prevent the
 310 cables from riding out of the grooves, cable guides shall be provided. The suspension cable sheaves shall have a minimum pitch diameter of 3.5 in. (90 mm) and the power cable sheave or individual rollers in a roller assembly shall have a minimum pitch diameter of 18.5 in. (470 mm) and shall be grooved to fit the power cable.

All components at the top of the pole shall be protected from the weather by a dome fabricated from steel in accordance with 920.01(b)1, fiberglass, or spun aluminum.

The dome shall be secured to the head frame assembly with at least eight
 320 fasteners around the perimeter of the dome. The dome shall be reinforced at the points of attachment and it shall be fitted to the head frame assembly so that no visible distortion occurs to the dome when it is properly installed. The dome attachment shall be designed to withstand pole vibration, other pole movement, and

920.01

the design windload. The fiberglass dome shall be made of material that is not subject to cracking or other deterioration because of aging.

6. Winch Assembly

340 The winch cable shall be 5/16 in. (8 mm) diameter galvanized steel aircraft cable of 7 strands with 19 wires each strand with a minimum breaking strength of 9800 lb (43 600 N).

The winch shall have a drum with a minimum diameter of 4 in. (100 mm) and drum flanges with a minimum diameter of 8 in. (200 mm). The drum shall be supported at each end by a rigidly mounted permanently lubricated bearing capable of carrying the design load. The winch drum shall be designed to allow the cable to lay in even consecutive layers.

340 The winch shall be driven by a self locking, worm gear reducer. The gear reducer shall be permanently lubricated and totally enclosed in a cast aluminum or cast iron housing. The winch assembly shall be powered by an external drive system.

7. External Drive System

350 The external drive system shall be powered by a heavy duty reversing NEMA frame motor with an electromagnetic friction breaking mechanism rated at a minimum of 6 ft-lb (8.15 J) of torque per motor horsepower (746 W). The brake shall be actuated each time the power to the motor is interrupted. The breaking mechanism shall be an integral part of the motor housing. The motor operated drive shall have a factory set torque limiter or clutch. This clutch assembly shall be calibrated to position the ring at the top of the pole and not exceed 80% of yield strength of the cable.

The external drive system shall operate with the 240/480 AC volt power available at the pole or incorporate a transformer into the system. The external drive system may use either the luminaire power plug or a separate outlet with a 600 volt, 30 ampere rating. The external drive system shall be operated from a minimum distance of 25 ft (7.6 m) from the pole. The control voltage for any hand-held control equipment shall not exceed 120 volts. The hand-held control equipment shall be shock proof.

360 The external drive system shall be capable of operating all high mast pole installations. Shop drawings shall be furnished in accordance with 920.01(g) and shall include the dimensions and the wiring diagram of the standard connections of the external drive system. The external drive system shall be mounted on a two wheel cart with wheels at least 12 in. (300 mm) in diameter and the weight shall be distributed so that it presents a balance load.

8. Cable Terminator

The three luminaire ring support cables shall be attached to three stainless steel helical compression springs incorporated into the cable terminating device. These

- 370 springs shall be designed to compensate for inequalities in the cable lengths and to maintain adequate tension on the support cables through pole and cable thermal expansion and contraction.

The cable terminator shall incorporate a separate eye bolt on the bottom of the device for the attachment of a cable or chain to hold the luminaire ring in a raised position while the winch cable or winch assembly is being inspected or repaired. The cable terminating device shall be designed to prevent the device from catching on the slip joint of the structure.

380 **9. Lightning Rod Assembly and Grounding System**

The lightning rod, air terminal, shall shield the head frame assembly cover and the outer edge of the luminaires within a 45 degree electrostatic shielded cone. The grounding system shall include bonding plates, grounding clamps, four 5/8 in. (16 mm) diameter by 12 ft (3.7 m) copperweld grounding rods, a grounding conductor with a minimum size of 28 strands of 14 gauge bare copper wire in rope lay configuration, 9/16 in. (14 mm) diameter with a weight of copper of 375 lb (136 kg) per 1000 ft (306 m), air terminal, lightning rod and other incidental connectors. All hardware shall be stainless steel, brass, copper, copper alloy, or equally corrosion-resistant metal.

- 390 Bonding plates, with a minimum contact surface area of 8 in.² (5160 mm²), shall be installed at locations shown on the plans. The bonding plates shall be welded to the tower shaft during the time of manufacturing. The grounding conductor shall be secured to the bonding plates by a two bolt pressure plate clamp connector having a minimum of 4 in. (100 mm) of contact with the copper wire. At the point of termination the grounding conductor shall extend beyond the bonding plate a minimum of 3 in. (75 mm).

- 400 Each ground rod clamp shall have a minimum of 1 1/2 in. (38 mm) of contact between the grounding conductor and the ground rod. The grounding conductor shall be continuous between the bonding plates inside the tower shaft handhole and the grounding rod termination point.

Bends of conductors shall form an angle of 90 degrees or more. Unsupported conductors shall have a radius of bend 8 in. (200 mm) or greater.

10. Anchor Bolts

- 410 Anchor bolts for high mast poles shall be furnished in a pre-clustered form and shall be a hooked deformed reinforcing bar or a hooked smooth bar. The bolts shall be in accordance with ASTM A 615 (A 615M) modified to a minimum yield strength of 75,000 psi (517 MPa). The top 12 in. (300 mm) of each anchor bolt, nut, and washer shall be galvanized in accordance with ASTM A 153 or be mechanically galvanized and in accordance with the coating thickness, adherence, and quality requirements of ASTM A 153, class C.

(c) Wire and Cable

Lighting circuit cables for direct burial shall be enclosed in polyethylene conduit.

420

1. Polyethylene Conduit

This conduit shall be in accordance with ASTM D 3485 either medium density type II, class C or high density type III, class C smooth wall, coilable polyethylene conduit for preassembled wire and cable.

The size of the conduit for different cable conductor sizes shall be as follows.

Cable Conductor Size	Conduit Size
3-1/C No. 4	1 1/4 in. (32 mm)
3-1/C No. 2	1 1/2 in. (38 mm)
3-1/C No. 1/0	2 in. (50 mm)
3-1/C No. 3/0	2 in. (50 mm)

2. Conductors in Cable-Duct

430

The cable shall consist of three separate electrically insulated conductors installed in the duct so any one conductor may be easily removed without damage to the other two. The conductors shall not be cabled or twisted together. The conductors shall be stranded copper of the AWG size specified. Conductor sizes No. 8 AWG and larger shall be stranded in accordance with ASTM B 8, class B.

Each conductor shall be insulated with crosslinked polyethylene manufactured in accordance with Insulated Power Cable Engineer Association publication S66-524. Each conductor shall have the following characteristics: a 600 volt rating; UL listed; an XHHW conductor temperature rating not to exceed 90°C in dry locations; and not to exceed 75°C in wet locations.

440

Each of the three conductors shall be imprinted at regular intervals with the following description: Type XHHW; 600 volt; UL; the conductor's AWG size and metal or alloy; the manufacturer's name, trademark, or other distinctive marking by which the product can be readily identified.

450

Identification coding of the conductors shall be accomplished by complete color coding or by ribbing of the insulation. Color coding of the insulation shall be homogeneous throughout the entire depth and length of the jacket. The colors shall include one black, one white, and one red. Ribbing shall consist of one non-ribbed conductor, one single ribbed conductor, and one double ribbed conductor. The same method of conductor identification coding shall be used throughout the project.

3. Lighting Standard Circuit Wiring

This wiring shall consist of two 1/C No. 10 AWG, 600 volt, THWH or MTW insulation, stranded copper wire.

4. Sign and Underpass Wiring

The wiring from the switch box to the last luminaire shall be 3/C copper stranded No. 10 AWG conductors and shall have imprinted at regular intervals along the length of the insulation jacket the following designation: No. 10 AWG, type MTW or THHN or THWN or Gasoline and Oil Resistant II or AWM, 600 volt, UL. The conductor classifications shall be UL listed and have the following minimum temperature ratings: MTW 90°C; THHN 90°C; THWN 75°C; and AWM 105°C. It shall be installed in 3/4 in. (19 mm) conduit between the breaker box and luminaires.

5. Aerial Cable

This cable shall be triplex secondary distribution cable consisting of two insulated conductors and a steel reinforced bare copper messenger neutral. The insulated conductor shall be No 6 AWG stranded copper with 600 volt, XHHW-XLP type insulation.

6. High Mast Tower Luminaire Ring Conductors

The wiring from the terminal box on the ring through the last luminaire shall be in accordance with 920.01(c)4.

7. Power Cable-High Mast Poles

The power cable shall be a 4/C No. 10 AWG copper insulated electrical cable type "SO" modified for a repetitive reeling operation. It shall be in accordance with ASTM B 3, ASMT B 173, and IPCEA S-19-83. Conductor insulation shall be in accordance with ASMT D 169 and IPCEA S-19-81, Paragraph 3.12. The sheath or jacket shall meet or exceed IPCEA S-19-81, Paragraph 7.6.20.1.1. Conductors shall be color coded.

The power cable shall have a heavy-duty 600 volt, AC 30 amp rated electrical plug capable of disconnection in a safe manner under load conditions. The electrical plug shall be moisture resistant and waterproof at both transition points.

8. Electrical Connectors

Connectors shall be a compression type of the proper size with only one conductor per groove in the fitting. They shall be designed specifically for use on aluminum and copper conductors, prefilled with an oxide inhibitor and installed with a hydraulic tool according to the manufacturer's specifications. After installation, the connectors shall be fully insulated and weatherproofed. The connectors installed in underground handhole shall be taped and then waterproofed as shown on the plans.

(d) Luminaires

1. General Requirements

Lamps supplied for luminaires shall be electrically compatible with the luminaires. Luminaires shall include the lamp ballast. The ballast shall be integrally built in and of the constant wattage regulator type of sufficient size to operate the designated lamp at the required voltage. The ballast shall provide satisfactory lamp

920.01

performance to 20°F (-7°C) with an input voltage variation of $\pm 10\%$ of the rated operating voltage specified.

510 Luminaires shall include vandal shields when installed on an underpass or signs on bridge brackets and when otherwise specified. The vandal shield shall be made of a tough durable plastic, such as Lexan, mounted in a rugged galvanized steel or aluminum frame, and shall withstand severe impact without being damaged or allowing the refractor to be damaged. It shall be fastened securely to the luminaire so it can not be removed from the outside and shall not interfere with the light distribution pattern. It shall protect the face of the refractor and if ventilation is necessary, the ventilating apertures shall be arranged so that they do not admit a probe of a diameter greater than 1/4 in. (6 mm).

2. Roadway Lighting Luminaires

520 Roadway lighting luminaires shall have a precision-cast aluminum housing and refractor holder with weatherproof finish. They shall have a strong, easily operated, positive latch on the street side of the refractor holder and a hinge with a safety catch that prevents accidental unhinging on the house side of the refractor holder. They shall include a slipfitter capable of adapting to a 2 in. (50 mm) mounting bracket; an easily detachable highly specular aluminum reflector; and an easily adjustable socket in both horizontal and vertical directions capable of producing lighting patterns to meet all the requirements of the American Standard Practice for Roadway Lighting as sponsored by the Illumination Engineering Society and as shown on the plans. They shall have a high impact, heat-resistant, glass, prismatic refractor; and include gasketing that will completely seal out dust, moisture, and insects from the interior of the optical assembly and retard the formation of an undesirable film from gaseous vapors on the interior of the optical assembly.

530

3. Sign Luminaires

Luminaires shall be 250W mercury vapor unless otherwise specified. Sign luminaires shall have the same requirements as roadway luminaires plus a shield that blocks the view of the refractor from an approaching motorist. This shall be accomplished by the design of the housing or by a shield fabricated from sheet aluminum, approximately 0.05 in. (1.3 mm) thick, and of sufficient size to be fastened onto the horizontal edge of the refractor holder with self tapping screws and placed between the refractor and approaching traffic.

540 Aluminum and steel structural members for luminaire supports shall include aluminum conduit, conduit clamps, fittings, and stainless steel screws.

4. Underpass Luminaires

Underpass luminaires shall have the same requirements as roadway luminaires except they shall have vandal shields and the ballast shall meet the same requirements except it may be mounted separately near the luminaire as shown on the plans.

5. High Mast Luminaires

550 The luminaires shall be in accordance with the American Standard Practice for Roadway Lighting by the Illumination Engineering Society and shall produce lighting patterns as shown on the plans. The lamp in the high mast luminaire shall be supported at both ends with mechanical spring grips or other means to hold the lamp secure against vibration. The socket shall be mogul sized and porcelain enclosed. The luminaire housing shall be an enclosed aluminum unit with a reflector and borsillicate glass refractor. It shall include gasketing that will completely seal out dust, moisture, and insects from the interior of the optical assembly and retard the formation of an undesirable film from gaseous vapors on the optical assembly.

(e) Circuit Breakers and Enclosure

All circuit breaker enclosures shall be NEMA 4/5.

1. Circuit Breakers for Type II Service Point

The cabinet and hardware shall be weatherproof and rain tight. The enclosure shall have provisions for pad locking. The fastener and mounting hardware shall be plated brass, stainless steel, or aluminum. The enclosure shall be made of 14 gauge aluminum or 14 or 16 gauge (1.5 mm) stainless steel. The circuit breaker operating handles for manual tripping shall be concealed inside the enclosure. Computation of branch circuits shall be based on the National Electrical Code Standard Limitation of loading breakers to 80% of their rated current. Additional details shall be as shown on the plans.

2. Circuit Breakers for Sign and Underpass Circuits

Sign and underpass circuit protection shall be provided by two single pole, 240 volt AC, 120 volt for 120/240 volt service, circuit breakers with ampere rating of 200% of the normal load. The circuit breakers shall have provisions for padlocking externally. The circuit breaker operating handles for manual tripping shall be concealed inside the enclosure. The enclosure shall be made of aluminum or stainless steel. Additional details shall be as shown on the plans.

3. Circuit Breakers for High Mast Poles

580 The enclosure shall be furnished with two single pole, 30 ampere, 480 volt AC circuit breakers with a minimum symmetrical RMS interrupting capacity of 14,000 amperes. The breakers shall be accessible through the pole handhole. The circuit breaker operating handles for manual tripping shall be external to the enclosure. The enclosure shall be made of aluminum or stainless steel. Additional details shall be as shown on the plans.

4. E-Series Magnetic Circuit Breakers

590 These breakers shall have the following features.

- a. capable of 10,000 on-off operations;
- b. interrupting capacity of 7,500 amperes;

- c. temperature stable so as not to be adversely affected by temperature changes over their operating environment of -40°F (-40°C) to 185°F (85°C);

600

- d. lug range 1/0 - 14 copper and 1/0 - 12 aluminum; and
- e. trip on overload, even when handle is forcibly held in the ON position.

(f) Multiple Relay Switches with Photocell Receptacles

Multiple relay switches with photocell receptacles shall have a two pole relay for connection to a 120/240 or 240/480 volt, 3 wire, single phase, 60 hz power supply. The relay switch components shall match the service voltage being supplied. The unit shall contain two single pole circuit breakers with a minimum rated capacity to withstand 100% of the rated ampere load. The circuit breakers shall trip at not less than 125% of the rated load capacity. Control circuit arresters for lighting protection and a manual control selector switch shall be included within the unit. The enclosure shall be a cast aluminum weatherproof case, with a hinged cover, having provisions for padlocking and a hanger for pole or wall mounting.

610

(g) Shop Drawings

Six sets of shop drawings shall be submitted for lighting standard assemblies, luminaires, service points, circuit breaker enclosures, external drive assemblies, and multiple relay switches. A copy of the transmittal shall be given to the Engineer. These items shall not be ordered or installed until shop drawings have been approved.

620

These drawings will be reviewed for design features only. The Contractor shall be responsible for dimensions, accuracy, and fit of work. The drawings for conventional light standards shall show the shaft outside diameter, height, wall thickness, the arm length rise, size, handhole details, grinding details, materials used, and complete anchor bolt details including bolt circle-projection and hardware. When a breakaway base is required, details shall be shown. Service point shop drawings shall show the arrangement and brand name of each component.

630

When requested, sufficient design data shall be furnished with the drawings to verify the conventional light standards meet wind load, deflection, vibration, and breakaway requirements. All of the above shall be based upon the lighting standards as shown on the plans. After approval, the Engineer shall be advised of where changes to the Installation Summary Sheets must be made because of existing roadside conditions. Where necessary, additional light standard drawings shall be submitted for approval.

640 Unless calculations are on file with the Department, the following design calculations and data shall be submitted for approval prior to the fabrication of any parts of the high mast pole.

1. general dimensions of all component parts;
2. the maximum moments, the section modulus required, and the section modulus furnished at the base of the pole, at all splices, at the connection of the ring and at least every 20 ft (6.1 m);
- 650 3. computation of stresses in base plate, connection attachment, and anchor bolts;
4. maximum deflection at the top of the structure under the specified loading; and
5. the dimensions and wiring diagrams of the external drive system connection to the pole in accordance with 920.01(b)7.

(h) Materials Certification

660 Unless otherwise specified, materials furnished under this specification require a type C certification in accordance with 916.

SECTION 921 – PAVEMENT MARKING MATERIALS

921.01 Traffic Paint

Traffic paint shall be in accordance with 909.05.

921.02 Durable Marking Material

Durable marking material shall be thermoplastic, preformed plastic, or 100% solids epoxy.

10 (a) Thermoplastic

This material shall be in accordance with AASHTO M 249.

(b) Preformed Plastic

20 This material shall consist of a homogeneous preformed plastic film with a minimum thickness of 60 mils (1.5 mm) and a width as specified. The preformed plastic material shall have a precoated adhesive and an easily removable backing which shall protect the adhesive in storage and facilitate rapid application. The adhesive shall allow the preformed plastic material to be repositioned on the pavement surface to which it is applied before permanently fixing it in its final position with downward pressure.

The plastic material shall be capable of being affixed to either HMA or PCCP by means of the precoated adhesive and, following the initial application of pressure,

shall mold itself to pavement contours, breaks, and faults by traffic action at normal pavement temperatures.

- The color of the white plastic film shall be determined by a standard color difference meter, such as the Gardner Color Difference Meter manufactured by Gardner Laboratories, Inc. Bethesda, Maryland. The plastic film shall not show deviations from a magnesium oxide standard greater than the following.

SCALES	DEFINITION	MAGNESIUM OXIDE	SAMPLE
Rd	Reflectance	100	70 Minimum
a	Redness-Greenness	0	-5 to +5
b	Yellowness-Blueness	0	-10 to +10

The color of the yellow plastic film shall visually match color No. 33538 of Federal Standard 595a. The pigment shall include medium chrome yellow.

1. Material Requirements

- The material shall be composed of plasticizers, pigments, and glass beads. The pigment shall contain 20% minimum titanium dioxide for white plastic material. During manufacture, glass beads shall be mixed into the compound at a minimum of 15% and a maximum of 20% by weight. A layer of glass beads shall be bonded to the top surface.

a. Tensile Strength

- The specimens for this test shall be type I prepared in accordance with ASTM D 638 (D 638M). A sample 6 in. by 1 in. (150 mm by 25 mm) shall be tested at a temperature between 70°F (21°C) and 80°F (27°C) using a jaw speed of 0.25 in. (6.4 mm) per minute. 1 in. (25 mm) squares of carborundum extra coarse emery cloth or equivalent may be applied to each end of the test sample to prevent the plastic adhesive from adhering to the test equipment. The break resistance shall be based on an average of at least three samples. The elongation of the film at rupture shall be 15% minimum and 50% maximum. The minimum tensile strength shall be 40 psi (275.8 MPa).

b. Adhesive Stability Test

- A 3 in. by 6 in. (75 mm by 150 mm) sample of plastic material shall be applied to a 3 in. by 6 in. (75 mm by 150 mm) piece of carborundum extra coarse emery cloth or equivalent, so that a 3 in. by 3 in. (75 mm by 75 mm) overlap occurs. The specimen shall withstand a static load of 4 lb (17.8 N) for a period of 30 min, in accordance with ASTM D 816, method B. The slippage between the plastic sample and the emery cloth shall not exceed 1 in. (25 mm). The test shall be conducted at a temperature between 70°F (21°C) and 80°F (27°C).

c. Adhesive Shear Strength

Specimens shall be tested in accordance with the method described in ASTM D 638 (D 638M) as modified to test the adhesive shear strength. Plastic

70 samples cut to dimensions of 1 in. by 6 in. (25 mm by 150 mm) shall have applied to the adhesive face a 1 in. by 3 in. (25 mm by 75 mm) piece of carborundum extra coarse emery cloth, or its equivalent, so that there is a 1 in.² (645 mm²) overlap at one end of the plastic specimens. A pressure of 50 psi (344.7 kPa) shall be applied over this area for a period of 30 s. The load shall be applied by gripping each end of the test piece in a suitable tensile test machine such as a Dillon or Scott Tester. The average of the load required to break the adhesive bond shall be 10 lb (4.5 kg) minimum. The speed of testing shall be conducted at a temperature between 70°F (21°C) and 80°F (27°C) and at a speed of 2 in. (50 mm) per minute.

d. Bend Test

80 At a temperature of 80°F (27°C) the property of the plastic material shall be such that a piece 3 in. by 6 in. (75 mm by 150 mm) with the side covered by backing paper placed against a 1 in. (25 mm) mandrel may be bent over the mandrel until the end faces are parallel and 1 in. (25 mm) apart. Visual inspection shall show no apparent fracture lines in the uppermost surface.

2. Packaging

Each package shall be marked to indicate the color of the material, specific symbol or word message, the batch number, the manufacturer's name, address, and the date of manufacture.

3. Basis For Use

90 A type C certification in accordance with 916 shall be furnished for the preformed plastic material except materials used for temporary pavement markings.

(c) 100% Solids Epoxy

This material shall be a two component material. Component A shall consist of pigment and epoxy resins formulated as set out by the manufacturer. The mixing ratio for the two components of the material shall be as recommended by the material manufacturer. This ratio shall not vary more than $\pm 2 \frac{1}{2}\%$ during the mixing operation or the application procedures of these materials.

Component A shall have the following properties.

100

Property	Minimum % by Weight
Pigment	
White, TiO ₂ , conforming to ASTM D 476, Type II	22
Yellow, Medium chrome yellow conforming to ASTM D 211, Type III	25
Epoxy Resins	
White	77
Yellow	70

921.02

The pigment composition shall consist of either titanium dioxide or medium chrome yellow. The epoxide value shall be tested in accordance with ASTM D 1652 and shall be 300 to 375 for both white and yellow component A, pigment free basis.

Component B shall be a curing agent and shall have the amine number tested in accordance with ASTM D 2071. The amine number shall be 300 to 450.

The system, component A plus component B, shall contain no volatile solvents.

110

1. Material Requirements

a. Glass Beads

The glass beads shall be in accordance with 921.02(e).

b. Abrasion Resistance

120 The material shall be abraded with 1000 cycles using a 1000 gram load on CS-17 wheels in accordance with ASTM D 4060. The average loss in weight shall not exceed 82 milligrams. The tests shall be run on cured samples which have been applied at a film thickness of 15 mils \pm 1 1/2 mils (375 μ m \pm 38 μ m) to code S-16 stainless steel plates. The films shall be allowed to cure at a temperature between 70°F (21°C) and 80°F (27°C) for 72 h prior to performing the indicated test. The test panel shall be unbeaded.

c. Hardness

130 The epoxy materials shall be tested in accordance with ASTM D 2240 and have a Shore D hardness of between 75 to 100. Films shall be cast on a suitable substrate at 15 mils \pm 1 1/2 mils (375 μ m \pm 38 μ m) in thickness and allowed to cure at a temperature between 70°F (21°C) and 80°F (27°C) for 72 h prior to performing the indicated test.

d. Tensile Strength

The material shall be tested in accordance with ASTM D 638 (D 638M). The tensile strength shall not be less than 6000 psi (41.4 MPa). The type IV specimens shall be cast in a suitable mold not more than 1/4 in. (6.4 mm) thick. The samples shall be allowed to cure at a temperature between 70°F (21°C) and 80°F (27°C) for 72 h prior to performing the indicated tests. The rate of pull shall be 1/4 in. (6.4 mm) per minute.

140

e. Compressive Strength

The material shall be tested in accordance with ASTM D 695 (D 695M), except as modified herein. The cured epoxy material shall have a minimum compressive strength of 12,000 psi (82.7 MPa). The cast sample shall be conditioned at a temperature between 70°F (21°C) and 80°F (27°C) for 72 h before performing the indicated tests. The maximum rate of compression of these samples shall be 1/4 in. (6.4 mm) per minute. The sample size shall be 1/2 in. (13 mm) high by 1/2 in. (13 mm) in diameter.

f. Weather Resistance

- 150 The mixed epoxy compound, both white and yellow, shall be applied to 3 in. by 6 in. (75 mm by 150 mm) aluminum panels at a thickness of 15 mils \pm 1 mil (375 μ m \pm 25 μ m) with no glass beads and cured at a temperature between 70°F (21°C) and 80°F (27°C) for 72 h. The cured samples shall be exposed in an Environment Testing Chamber as described in ASTM G 154. The test shall be conducted for 80 h at 122°F (50°C) in alternating cycles of 4 h condensation and 4 h ultraviolet light.

SPECIMEN	REQUIREMENTS
White Material	ASTM E 1347, directional reflectance a minimum 80% after exposure.
Yellow Material	Initially conform to V+ to C+ limits when visually compared with the highway yellow color tolerance chart, PR#1 of June 1965. The color of exposed material shall be within V+, C+, and H+ limits when visually compared.

g. Laboratory Drying Time

- 160 The epoxy pavement marking material shall be mixed in the proper ratio and applied at 15 mils \pm 1 1/2 mil (375 μ m \pm 38 μ m) wet film thickness at 75°F \pm 2°F (24°C \pm 1°C) with the proper application of glass beads. It shall exhibit a maximum no tracking time of 10 min when tested in accordance with ASTM D 711.

h. Viscosity

Formulations of each component shall be such that the viscosity of both components shall coincide within 10% at a recommended spray temperature. Component B shall be formulated so as to have a steady and constant viscosity at temperatures recommended for spray application.

2. Materials Preparation

Before mixing, the individual components shall be heated to the following temperatures.

Component	Temperature °F (°C)
A	90 to 100 (32 to 38)
B	70 to 100 (21 to 38)

Each component shall be stirred thoroughly prior to mixing. After mixing, the application temperature for the combined materials at the gun tip shall be between 90°F (32°C) and 100°F (38°C).

3. Packaging and Storage

- 180 The epoxy material shall be shipped to the job site in white epoxy lined drums which are plainly marked with the manufacturer's name and address, component identification A or B, the color of the material, date of manufacture, and batch number. Storage shall be at temperatures between 35°F (2°C) and 100°F (38°C).

The reflective glass beads shall be shipped in 50 lb (22.7 kg) moisture resistant bags. Each bag shall be marked in accordance with 921.02(e).

4. Basis For Use

- 190 Pavement marking material, except glass beads and material used for temporary pavement markings, furnished under this specification shall be covered by a type A certification in accordance with 916. A type A certification shall be furnished for each batch supplied. The material manufacturer shall perform all tests included elsewhere herein on each batch and shall provide these test results as part of the type A certification.

(d) Raised Pavement Marker

The raised pavement marker shall be either snowplowable, which is inset into the pavement, or temporary, which is affixed with adhesive to the pavement surface.

200 1. Snowplowable Raised Pavement Marker

Snowplowable raised pavement marker shall consist of a durable base to which is attached a replaceable prismatic retro-reflector for reflecting light longitudinally along the pavement from a single or from opposite directions. Both ends of the casting shall be shaped to deflect a snowplow blade upward.

a. Prismatic Reflector

- 210 The dimensions of the reflector face shall be nominal width of 4 in. (100 mm) and a minimum vertical height of 0.460 in. (12 mm) with a slope of 30 degrees from the horizontal to the face. Minimum reflecting surface area shall be 1.62 in.² (1045 mm²). The reflectors shall consist of an acrylic plastic shell filled with tightly adherent potting compound. The shell shall contain one of two prismatic faces. The reflector shall be in the shape of a shallow frustrum of a pyramid. The bottom of the reflector shall be equipped with a pressure sensitive adhesive for attachment. The shell shall be molded of methyl methacrylate conforming to Federal Specification L-P-380c, Type 1, Class 3. The filler shall be potting compound selected for strength, resilience and adhesion adequate to pass the necessary physical requirements. The adhesive shall be pressure sensitive, 100% solids, 0.040 in. (1.0 mm) thick with closed cell release paper on the bottom. Pressure sensitive adhesive shall meet the requirements of adhesive tensile strength test.

220

Prismatic reflectors shall not be installed on bases until the adhesive in the pavement slots has properly hardened. All rust or foreign matter shall be removed from the surface of the base and the base shall be coated with a primer in accordance with the manufacturer's recommendations. The release paper shall be peeled from the butyl adhesive bottom of the reflector. The reflector shall be inserted into the recessed attachment area and a downward pressure of 150 lb (667 N) shall be applied for 3 s.

(1) Optical Performance

230 In order to perform the optical performance test, the following definitions shall apply. Horizontal incident angle shall mean the angle in the horizontal plane between the direction of incident light and the normal to the leading edge of the reflector. Reflective intensity shall mean candlepower of the return light at the chosen divergence angle for each 10.76 footcandle (lux) of illumination at the reflector on a plane perpendicular to the incident light.

A steel wool abrasion test shall be performed by forming a 1 in. (25 mm) diameter flat pad using No. 3 coarse steel wool. The steel wool pad shall be placed on the reflector lens, a load of 50 lb (22.7 kg) shall be applied, and the entire lens
240 surface shall be rubbed 100 times.

After abrading the lens surface, the reflective intensity of each white reflecting surface at 0.2 degree divergence angle shall meet the following requirements when the incident light is parallel to the base of the reflector.

HORIZONTAL INCIDENT ANGLE	MINIMUM REFLECTIVE INTENSITY
0°	3.0 Candlepower/footcandle (0.279 cd/lx)
20°	1.2 Candlepower/footcandle (0.1115 cd/lx)

The reflective intensity for yellow reflectors shall be approximately 60% of the value for white. The reflective intensity for red reflectors shall be approximately 25% of the value for white. The reflective intensity for blue reflectors shall be
250 approximately 10% of the value for white.

A sample consisting of 100 markers shall be submitted and 23 will be tested. The reflectors to be tested shall be located with the center of the reflecting face at a distance of 5 ft (1.5 m) from a uniformly bright light source having an effective diameter of 0.28 in. (7 mm). The photocell width shall be an annular ring 0.37 in. (9 mm) inside diameter and 0.47 in. (12 mm) outside diameter and shall be shielded to eliminate stray light. The distance from light source center to the photocell center shall be 0.21 in. (5 mm). If a test distance of other than 5 ft (1.5 m) is used, the source and receiver shall be modified in the same proportion as the test distance.
260 Failure of more than 4% of the samples reflecting faces shall be the cause for rejection.

(2) Seal Test

A sample of 50 units shall be submerged in water at room temperature and subjected to a vacuum of 5 in. (125 mm) mercury for 5 min. After restoring atmospheric pressure, the units shall be left submerged for an additional 5 min. The unit shall be examined for water intake and failure of more than one unit shall be cause for rejection.

270 **(3) Heat Resistance Test**

Three reflectors shall be tested for 4 h in a circulating air oven at $175^{\circ}\text{F} \pm 5^{\circ}\text{F}$ ($80^{\circ}\text{C} \pm 3^{\circ}\text{C}$). The test specimens shall be placed in a horizontal position on a grid or perforated shelf permitting free air circulation. At the conclusion of the test the samples shall be removed from the oven and permitted to cool in air to room temperature. After exposure to heat, the samples shall show no significant change in shape and general appearance when compared with corresponding unexposed control standards. Failure of one or more units shall be cause for rejection.

(4) Strength Test

280 A random sample of three reflectors shall be selected for test purposes. The reflector base shall be positioned at the center of a flat steel plate which has a minimum thickness of 0.5 in. (13 mm) and a minimum outside diameter of 4.5 in. (114 mm). A load shall be applied to the top of the reflector through a 1 in. (25 mm) diameter by 1 in. (25 mm) high metal plug centered on the top of the reflector. The rate of loading shall be 0.2 in. (5 mm) per minute. The reflector will be rejected if there is either breakage or significant deformation of the reflector at any load of less than 2000 lb (8896 N).

(5) Impact Test

290 The red lens shall not be subjected to impact test. A random sample of 20 lenses shall be selected from each lot of reflectors.

The reflectors shall be placed in a convection oven at 130°F (55°C) for 1 h. The reflectors shall be removed from the oven and the reflective face shall be immediately impacted by allowing a 0.42 lb (0.2 kg) dart fitted with a 0.25 in. (6 mm) radius spherical head to drop 18 in. (460 mm) perpendicularly onto the center of the reflective surface. Cracks in the impact area shall be concentric in appearance. There shall be no more than two radial cracks longer than 0.25 in. (6 mm). There shall be no radial cracks extending to the edge.

300 If 18 lenses of the test samples meet the above requirements, the lot shall be acceptable. Failure of four lenses of the sample shall be cause for rejection of the lot. If three lenses fail, a resample of 20 additional lens shall be tested for failure. Failure of more than one lens of the resample shall be cause for rejection of the lot.

(6) Temperature Cycling Test

310 A random sample of 20 lenses shall be selected from each lot of reflectors. The samples shall be subjected to three cycles of 140°F (60°C) for 4 h followed by 20°F (-7°C) for 4 h. There shall be no cracking nor delamination following temperature cycling.

If 18 lenses of the test sample meet the above requirements, the lot shall be acceptable. Failure of four lenses of the sample shall be cause for rejection of the lot.

If three lenses fail, a resample of 20 additional lenses shall be tested for failure. Failure of more than one lens of the resample shall be cause for rejection of the lot.

(7) Adhesive Tensile Strength Test

- 320 A standard 4 in. by 2 in. by 0.46 in. (100 mm by 50 mm by 12 mm) reflector with pressure sensitive adhesive on the bottom shall be adhered to a flat 0.12 in. (3.0 mm) carbon steel test plate. The plate shall be primed in accordance with 921.02(d)1a, and the reflector shall be applied with a minimum application pressure of 60 psi (41 kPa). Both the top of the reflector and bottom of the flat plate shall have fastened to it an appropriate coupling device to ensure compatibility with the tensile testing device. The test sample shall then be tested in the tensile mode at 2 in. (50 mm) per minute pull rate. Minimum load to produce failure shall be 125 lb (566 N) at 70°F (21°C). Any load below 124 lb (566 N) is a failure and shall be cause for rejection of the lot.

(8) Basis For Use

- 330 The prismatic reflector shall be covered by a type B certification in accordance with 916.

2. Cast Metal Base

The base shall be a ductile iron casting made of modular iron in accordance with ASTM A 536, Grade 70-50-05 hardened to 52-54 RHC. The cast iron base shall be marked with the manufacturer's name and model number. The maximum dimensions shall be 2.00 in. (50 mm) high, 6 in. (152 mm) wide, and 10.0 in. (250 mm) long.

- 340 The exposed height of the casting after installation shall not exceed 0.50 in. (13 mm). The bottom of the casting shall have two parallel keels and a shaped web designed to fit into an accurately sawed, grooved slot in the pavement surface as shown on the plans.

a. Epoxy Adhesive

The epoxy adhesive shall be in accordance with AASHTO M 237, type IV, Table 3 with respect to composition and performance. For sampling purposes, a batch shall consist of a single charge of all components into a mixing chamber.

b. Basis For Use

- 350 A type B certification in accordance with 916 shall be furnished for the epoxy material. A type C certification in accordance with 916 shall be furnished for the cast metal base for the pavement markers.

3. Precast Cement Concrete Base

The base shall be made of cement concrete with a compressive strength of 5000 psi (34.5 MPa) when tested in accordance with ASTM C 39. The maximum dimensions shall be 2.00 in. (50 mm) high, 6 in. (150 mm) wide, and 10 in. (254 mm) long. The maximum exposed height of the base after installation shall be 0.50 in. (13 mm).

360

a. Adhesive for Precast Concrete Base

This adhesive shall be quick setting magnesium phosphate concrete patching material with high strength and high bonding qualities. This material shall be used between 30°F (-1°C) and 90°F (32°C) and in thicknesses varying from 1/2 in. (13 mm) to full depth.

The material may be complete dry mix requiring only the addition of either water or a liquid activator just prior to mixing and use. The material shall not contain sufficient soluble chloride nor soluble sulfates to cause corrosion of reinforcing steel or damage to portland cement concrete.

The adhesive shall have an initial setting time of 10 min in accordance with ASTM C 266. The compressive strength shall be in accordance with ASTM C 109 and as listed.

TIME	COMPRESSIVE STRENGTH
2 h	1500 psi (10.3 MPa) min.
24 h	4000 psi (27.6 MPa) min.
7 days	6000 psi (41.3 MPa) min.

The adhesive shall have a durability factor of not less than 80 after being subjected to 300 cycles of the freeze and thaw test in accordance with ASTM C 666, Procedure B.

380

The adhesive shall be suitable for use with hand tools and shall not require special curing procedures.

b. Packaging

The patching material adhesive shall be packaged in strong moisture resistant bags or other suitable containers capable of withstanding normal shipping and handling without damage. The container shall protect the material from deterioration for a period of one year when stored in a dry condition. Mixing instructions shall be printed on each container.

390

c. Basis For Use

A type C certification in accordance with 916 shall be furnished for the precast cement concrete base. A type B certification in accordance with 916 shall be furnished for the marker adhesive patching material.

(e) Glass Beads

Glass beads shall be in accordance with AASTHO M 247, type I except sampling shall be in accordance with the frequency manual. The beads shall have a moisture resistant coating.

400

SECTION 922 – TRAFFIC SIGNALS

922.01 Traffic Signal Controller and Cabinet

(a) Model Approval

- Each model of controller and its cabinet will be tested, evaluated, and approved prior to use. Testing, evaluation, and approval will require a minimum of six months to perform. The period of evaluation will commence when the Department receives the preliminary product evaluation form accompanied by the product brochure, operational manual, maintenance manual, and documented theory of operation. The Logistical Support Center will advise the manufacturer or vendor, in writing, of the date to deliver the controller and cabinet, for which model approval is requested, to the Logistical Support Center. Certification in accordance with 922.01(f)6b, shall be received at the Logistical Support Center a minimum of two weeks prior to the date of delivery of the controller and cabinet. Certifications in accordance with 922.01(f)6a, schematics for the controller and cabinet, operational manuals, theory of operation and parts list shall be furnished with the controller when it is submitted to the Logistical Support Center for evaluation and testing. The controller and cabinet will undergo the bench test in accordance with 922.01(d). A controller or control unit that fails the bench test procedure three times will be rejected and will not be placed upon the approved products list, nor will it be considered for future evaluation without documented changes to design. A list of approved Models will be maintained by the Department. Only models from the approved list of Control Equipment in effect as of the date of letting, or as otherwise specified, shall be used in the contract. Continued failure and repeated malfunctions of an approved controller or control equipment shall be cause to remove that model from the Department's list of approved Products.

- A design change to an approved model of controller will require a resubmittal of the model for testing, evaluation, and approval. Permanent addition or removal of component parts or wires will be considered to be a design change.

(b) Controllers or Control Units Furnished and Installed by the Contractor

- A controller with all components of equipment, necessary for an operating signal, wired into a cabinet will be a control unit. The Contractor shall prepare three packets for each control unit and provide these packets to the Engineer. Packet 1 shall consist of one complete set of wiring and schematic diagrams for the control unit and its appurtenances and a listing of model name/number and serial number of the removable equipment that can be readily exchanged or replaced, such as controller enclosure, controller modules, load switches, conflict monitor, detectors, and flashers. Packets 2 and 3 shall each consist of the same items as in Packet 1 plus a descriptive parts list and instruction and maintenance manuals that include the manufacturer's data sheets on each different type of I.C. chip being used, connection diagrams, voltage checks and the theory of operation. Each packet shall be labeled with the name of the intersection, the Contract Number, the Commission Number

and the date of installation. Packet 1 will be forwarded to the Logistical Support Center, packet 2 will be retained in the controller cabinet, and Packet 3 will be retained by the District Traffic Office.

50

The Contractor shall be responsible for all costs associated with vendor or manufacturer warranty service until acceptance of the contract, or acceptance of that portion of the contract where the traffic control equipment is installed.

(c) Blank

(d) Bench Testing

The Department's Traffic Signal Control Bench Test Procedures, which are used for bench testing of traffic signal controllers, cabinets, and related equipment are on file and available upon request.

60

During bench testing a control unit will be considered as failed if one of the following conditions are encountered during the physical or operational test procedure.

70

- a. The controller unit skips intervals, or phases, places false calls, presents false indicator lights, does not follow the prescribed sequence or exhibits changes in timing beyond the tolerances of the specifications.
- b. The load switches produce incorrect signal indications.
- c. The conflict monitor fails to perform in accordance with the specifications of the requisition or contract.
- d. Auxiliary equipment such as pre-emptors, coordinators, or detectors do not operate in accordance with the specifications.
- e. The wiring for the interface of any items set out above is defective or incorrect.

80

If the control unit fails the bench test procedure, the control unit shall be removed from the Logistical Support Center for repairs and returned to the Traffic Support Center for retesting. The cover letter for the resubmittal of the control unit for retesting shall include an explanation of why the unit failed and what specific repairs were made.

A written test report will be provided for each control unit tested. A representative of the manufacturer or vendor may be present during the bench testing procedure.

90

(e) Pretimed Solid State Digital Controller

The following requirements are the minimum for the design and operation of a pretimed solid state digital, keyboard entry or keyboard entry backlit liquid crystal display menu-driven display type controller. The controller shall be capable of operating as a master or secondary control unit having four cycles, three offsets and four splits per cycle, and a minimum of four signal plans with individual control of 24 signal circuits, with an option of a total of 40 signal circuits, in each of 24 intervals. Controller, cabinet, and component parts shall be in accordance with
 100 NEMA Standards TS-1, all provisions contained herein, and the Department's traffic signal control bench test procedures. The requirements herein and the test procedures shall govern over NEMA standards.

1. General

The controller shall have a keyboard entry or keyboard entry backlit liquid crystal display menu-driven type with internal pre-emption, time base coordination, telemetry, printer, and interconnect modules. The controller unit shall contain a printer interface module, which permits a hard copy printout of all keyboard settings. The unit shall employ circuit designs, consistent with the latest techniques, using a
 110 microprocessor to implement the control logic.

The keystroke buttons shall be clearly marked as to function. The controller shall be programmable to permit initialization in any interval after a defined power interruption or reset by the conflict monitor.

All data entry display windows shall be liquid crystal design. The display shall be a high resolution type display such that the display shall be readable on a plane located 2 ft (0.6 m) in front of, and parallel to, the display window. As a minimum, the display shall be readable throughout a vertical 60 degree angle that contains a
 120 minus 15 degree angle to a plus 30 degree angle measured from the horizontal line that is perpendicular to the center of the display window. Also, the display shall be readable throughout a horizontal 60 degree angle that contains a minus 15 degree angle to a plus 30 degree angle measured from the vertical line that is perpendicular to the center of the display window. The backlit liquid crystal display shall have a diffusion type lens or membrane to reduce its surface glare. All menu driven, data entry displays shall be backlit. The display for the menu driven controller shall be a minimum of four lines with 40 characters per line. All programming buttons and indicators pertinent to the operation of a phase shall be on the front of the controller. The display windows shall be capable of displaying the cycle length, offset, split,
 130 and any other variable functions or controller settings.

Materials, conductors and component identification for all printed circuit boards shall be in accordance with NEMA Standards TS-1-14.2.3. Where practical, components shall be individually soldered directly to the printed circuit boards except for the memory elements, such as ROM, RAM, and PROM, which shall be socket mounted.

140 All volatile memory chips and modules shall have battery back-up to protect any operator programmed data for a period of at least 60 days without 115 volt, 60 hertz AC input to the controller unit. Battery back-up may be achieved with either a rechargeable battery maintained in a charged state through a trickle charge or a non-rechargeable battery with a minimum shelf life of 10 years. Batteries shall be capable of being disconnected for shelf storage of the controller unit. An indicator shall be provided on the front of the controller to indicate that the battery is connected and operating properly. If a non-rechargeable battery is supplied, an indicator shall also be provided to show a low battery charge. The memory module, when removed from the mainframe, shall maintain all programmed data for at least 48 h.

150 Any external battery within the controller unit shall be turned off or disconnected during shipment and storage.

All electrical components such as integrated circuit chips, transistors, diodes, triac, and capacitors shall be of such quality that they function properly under the environmental conditions experienced in field operation. All printed circuit boards shall be protected with a rosin coating. Fusing shall be on the front panel of the controller and shall provide protection to the controller from internal and external overload.

160 The motherboard in the mainframe shall be capable of accepting all plug-in modules, including additional modules to provide for 40 signal circuits, necessary for the operation of the controller. All plug-in modules shall be equipped for easy removal or installation without the use of tools. All plug-in circuit boards shall be readily accessible for maintenance. Extender boards may be used for this purpose. As a minimum, all circuit boards shall be edge labeled with the first and last number, the first and last letter, and the first and last double letter if applicable, corresponding to the pin connector position. All modules shall each be removable without removing any other module. All hinges used shall have stainless steel pins.

170 The controller unit shall be able to operate as a master controller or a secondary controller without requiring any changes in the unit itself. When used as a master controller, it shall not be required to program the unit's offsets to zero. The controller unit shall be capable of operating in an existing pretimed interconnected system, which may have an electromechanical interrupter utilizing 115 volts, 60 hertz, AC. Cycle, offset, and split selectability shall be either by application of 115 volts, 60 hertz AC to the fuse panel or manually from the keyboard. Use of 115 volts AC Interconnect to a 24 volts DC logic interface is acceptable. As a minimum, the controller shall be capable of accepting nine conductors for interconnect, two conductors for cycle 1-4 selection, three conductors for reset 1-3 selection, two conductors for split 1-4 selection, and one conductor each for flash and common.

180 With each controller unit and cabinet there shall be furnished three complete sets of wiring and schematic diagrams, two descriptive parts lists, two instruction and maintenance manuals that include the manufacturer's data sheets on each different

type of integrated circuit chip being used that has not been previously submitted to and on file at the Logistical Support Center, connection diagrams, voltage checks and the Theory of Operation. The instructions manual shall contain explicit programming procedures for all required features and any additional features incorporated in the controller's design. All schematics shall also include numbered test points, where applicable, with operating voltages.

190

Serial number and model numbers shall be permanently applied on the face or front of all removable components of the controller where it is easily readable, without removing or disconnecting the component. Serial number and model number of the main frame shall be permanently applied near the front panel.

2. Controller Requirements

The controller shall be capable of providing four cycle lengths with a minimum time setability from 10 to 255 s in increments of 1 s. Transfer from one cycle to another cycle shall occur at the end of the interval in effect at the time of request for transfer if that interval is programmed for transfer. Cycle selection of any of the four cycles, from a remote location, shall be accomplished by use of no more than three conductors.

200

The unit shall be capable of providing three individually programmable offsets for each cycle with a minimum time setability from 0 to 250 s in 1 s increments. The offset to be in effect shall be selected by activation of one of the three reset inputs of the controller. Energization of a reset input shall place that offset in effect independent of timing plan selection. Momentary de-energization, for a period of 3 to 5 s, of a reset input shall define the system reference or synchronization.

210

The controller shall have program selected capabilities of a minimum of two methods of offset seeking transfer, shortway or dwell.

Shortway offset transfer is the transfer from one offset to another by shortening or lengthening the permitted intervals of the signal plan so that no offset change may exceed 25% of the cycle length in one cycle. The new offset shall never be more than 50% away from the existing offset. The permitted intervals, whose duration may be varied, shall be specified in the signal plan. During shortway offset seeking, no interval shall time less than the minimum programmed, in the signal plan, for that interval.

220

Dwell offset transfer is the transfer from one offset to another by holding in a programmed interval up to a maximum programmed duration. The controller shall be capable of programming the maximum dwell time between 1 and 250 s in 1 s increments. Only one maximum dwell interval shall be timed between transitions of reset input lines. The unit shall be capable of accepting interrupter pulses.

The controller shall provide the capabilities of four splits for each programmed cycle. Each split for each cycle shall consist of a programmed number of intervals,

230 variable up to a maximum of 24. If split transfer is programmable, transfer from one split to another shall occur in the intervals programmed to allow split transfer. If split transfer is not programmable, transfer shall occur at the zero point of the cycle. Split selection of any of the four splits, from a remote location, shall be accomplished by the use of no more than three conductors.

A minimum of 24 signal intervals shall be provided for each combination of cycle and split. The intervals shall be individually programmable minimum time setability, selectable from 0 to 12.7 s in increments of 0.1 s or from 0 to 127 s in increments of 1.0 s for each cycle and split. The controller shall be capable of
240 copying the timing values for any cycle and split into any other cycle and split in one operation.

If the controller can indicate time settings greater than required, the greater time settings shall be active when entered into the controller.

The controller shall be capable of implementing any one of up to four different signal plan sequences. The signal plan shall be either externally selectable by placing logic ground to the input terminal or manually selectable through the keyboard. During any controller cycle, it shall be possible to operate in any of the four signal
250 plans, if the signal plans are compatible. Signal plan transfer shall occur in the next interval programmed for signal plan transfer. Each signal plan shall have at least one interval to enable safe transfer between signal plans. The controller unit shall operate in accordance with the programmed values for the selected cycle, offset and split, regardless of the signal plan in effect. Signal plan PROM programming shall effect the On-Off-Flash condition of the signal circuits, and minimum and backup timing of each interval.

The unit shall provide the capabilities for a minimum of two detector inputs which can be programmed for Lock, Non-Lock, or Recall modes. The detector inputs
260 shall provide a means to enter vehicle or pedestrian demand. When activated, these inputs may add intervals up to a total of 24 intervals to the cycle.

The unit shall provide the capabilities for a minimum of two preempt inputs. These inputs, either of which is activated, shall cause initialization of the selected preemption sequence which shall remain in effect until the input is removed.

The controller unit shall have an internal time clock with capabilities of programming for time-of-day, day-of-week, and week-of-year. The time clock shall allow selection of cycles, splits, and offsets through the time clock, the hardware
270 interconnect, the communication module, manual selection through keyboard entry, or a combination of these functions.

The controller shall have internal communication and telemetry with at least FSK 1200 Baud rate capable of transmitting on Bell 3002 four wire conductor with 600 ohm line impedance.

The controller unit shall provide capabilities for the following inputs: Stop Timing, External Start, Start-up Flash, Interval Advance, Manual Control Enable, Remote Flash, and System or Computer Control.

280

Stop timing shall cause all timings to be discontinued. When stop timing is removed, timing shall resume from the point of interruption.

External start shall cause the controller to assume its programmed initialization conditions and commence normal operations upon removal of the input.

290

Interval advance shall cause the controller to advance to the next interval in sequence, provided the manual control enable input is not energized. The actual advance shall occur on the trailing edge of the actuation. The duration of any interval shall be capable of being shortened without regard to the programmed minimum for the interval with the interval advance input active.

Manual control enable shall cause the controller to operate in the manual mode of operation. The transfer from automatic to manual mode operation and back to automatic operation shall occur immediately upon activation or de-activation of manual control enable.

300

When operating in the manual mode, the same color sequence, as provided in automatic control, shall be displayed. Duration of all programmed variable intervals shall be controlled by operation of the interval advance input. Duration of programmed non-variable intervals shall not be less than the minimum time specified in the signal plan for such intervals. Operation of the interval advance input shall not advance the controller out of these intervals.

Synchronization with the system shall be maintained during manual mode operation. When transferring back to automatic operation, the controller shall resume timing of the interval at the point in the selected timing plan that corresponds to the beginning of the interval being displayed when the transfer occurs.

310

Remote flash shall cause the controller to transfer to flashing operation when an AC+ signal is applied to the unit's fuse panel by an external source. The police panel switch shall cause the controller to go to immediate flash. Synchronization with the system master shall be maintained during flashing operation, if applicable. Upon de-activation of remote flash, transfer to cyclic operation shall be immediate and the unit shall display the interval that was programmed for exit from flash.

System or computer control, when activated, shall control the duration of the programmed variable intervals, except when pedestrian or vehicle calls are not placed on the detector inputs.

320

3. Spare Modules

All spare modules shall be in accordance with the appropriate sections of this specification.

4. Controller Enclosure

The enclosure shall be of adequate physical strength to protect the components during normal physical handling. Fusing, keypad, liquid crystal display, and input-output connectors required for the operation and standard field adjustments shall be mounted on the front panels.

330

The main frame shall be completely equipped and wired as a complete pretimed controller so that no additional hardware or wiring is required. The front panel of the controller shall be positively fastened to the frame. Special tools shall not be required to remove or replace modules or plug-connected printed circuit boards.

5. Power Requirements

The controller shall operate in accordance with NEMA Standard TS-1-2.

6. Certification of Traffic Control Units

340 Certification of traffic control units shall be in accordance with 922.01(f)6.

7. Warranty

The warranty for traffic control units shall be in accordance with 922.01(f)7.

(f) Traffic Actuated Solid State Digital Controller

The following requirements are the minimum for the design and operation of an 8 phase fully-actuated solid state, digital, menu-driven with backlit liquid crystal display controller. Controller, cabinet, and component parts shall meet NEMA Standards TS-1, all provisions contained herein, and the Department traffic signal control bench test procedures. The requirements herein and the test procedures shall govern over NEMA standards.

350

1. General

The controller shall be keyboard entry, menu-driven with liquid crystal type display. The controller shall have internal preemption, time base coordination, telemetry, printer and interconnect modules. The microprocessor shall utilize non-volatile memory devices. If "0" Powered Ram is utilized, the shelf life, with load, shall be a minimum of 10 years. Time base coordination shall use battery backed RAM to maintain the system clock and power outage. Any external battery
360 within the controller unit shall be turned off or disconnected during storage and shipment. With each controller unit and cabinet, there shall be furnished three complete sets of wiring and schematic diagrams, two descriptive parts lists, two instruction and maintenance manuals that include the manufacturer's data sheets on each different type of integrated circuit chips used that has not been previously submitted to and on file at the Logistical Support Center, connection diagrams, voltage checks, and the Theory of Operation. The instruction manual shall contain

explicit programming procedures for all required NEMA features and any additional features of which are incorporated into the controller design. All schematics shall also include numbered test points, where applicable, with operating voltages.

370

Serial number and model numbers shall be permanently applied on the face or front of all removable components of the controller where it is easily readable, without removing or disconnecting the component. Serial number and model number of the main frame shall be permanently applied externally near the front panel.

2. Controller Requirements

The time settings shall be in accordance with NEMA Standards TS-1-14. If the controller can indicate time settings greater than required, the greater time settings shall be active when entered into the controller. A minimum of two maximum timing parameters shall be supplied on all phases of the controller and shall function when activated.

380

The controller shall be capable of 2 through 8 phase programming and shall be capable of accepting an interrupter pulse on any coordinated phase.

Pedestrian timing shall be provided on all phases of a controller.

The backlit liquid crystal display window shall consist of a minimum of four lines with 40 characters per line. The display shall be a high resolution type display such that the display shall be readable on a plane located 2 ft (0.6 m) in front of, and parallel to, the display window. As a minimum, the display shall be readable throughout a vertical 60 degree angle that contains a minus 15 degree angle to a plus 30 degree angle measured from the horizontal line that is perpendicular to the center of the display window. Also, the display shall be readable throughout a horizontal 60 degree angle that contains a minus 15 degree angle to a plus 30 degree angle measured from the vertical line that is perpendicular to the center of the display window. The backlit liquid crystal display shall have a diffusion type lens or membrane to reduce its surface glare.

390

The Time Base Coordinator shall operate such that the line function has the capability to provide output for a minimum of four time of day functions during the same event time.

400

Controllers shall be capable of servicing eight phases. The control unit, when delivered, shall be programmed to initialize in phase 2 and phase 6 green. The controller shall be keyboard programmable to permit initialization in any phase after a defined power interruption or reset by the conflict monitor. The following recall functions shall be a minimum and shall show functional status on the liquid crystal display.

410

- (1) lock detection
- (2) maximum recall

- (3) minimum recall
- (4) non-lock detection
- (5) pedestrian recall

Keystroke buttons shall be clearly marked as to function.

420 All indicators shall be liquid crystal design. All programming buttons and indicators pertinent to the operation of a phase shall be on the front of the controller. The controller shall have complete phase skipping capabilities. Dual ring, eight phase controllers shall have single entry operation.

Controllers shall have keyboard programmable overlaps in accordance with NEMA Standards TS-1-14.3.7. All inputs and outputs from the controller shall be in accordance with NEMA Standards TS-1-13 and shall be accessible within the cabinet at the output terminal facility.

430 All electrical components such as integrated circuit chips, transistors, diodes, triac, and capacitors shall be of such quality that they function properly under the environmental conditions experienced in field operation. All printed circuit boards shall be protected with a rosin coating. As a minimum, all plug-in circuit boards shall be edge labeled with the first and last number, the first and last letter, and the first and last double letter if applicable, corresponding to the pin connector position. Input-output pin connectors and MS connectors shall be as specified in NEMA Standards TS-1. Fusing shall be on the front panel of the controller and shall provide protection to the controller from internal and external overload.

3. Spare Modules

440 All spare modules shall be in accordance with the appropriate sections of this specification.

4. Controller Enclosure

The enclosure shall be of adequate physical strength to protect the components during normal physical handling. Fusing, keypad, liquid crystal display and input-output connectors required for the operation and standard field adjustments shall be mounted on the front panels.

450 The main frame shall be completely equipped and wired as a complete 8 phase NEMA controller so that no additional hardware or wiring is required. The front panel of the controller shall be positively fastened to the frame such that no special tools shall be required to remove or replace modules or plug-connected printed circuit boards.

5. Power Requirements

The controller shall operate in accordance with NEMA Standards TS-1-2.

6. Certification of Traffic Control Units

The following certifications shall be furnished in accordance with the applicable provisions of 916.

a. Certification of a Production Run Model

A certification for a model of control unit shall be on file with the Department. A production run model shall be tested in accordance with, and comply with, all requirements of the NEMA Standards TS-1, Part 2, including shock and vibration. A certification of a production run model will be valid for a maximum period of four years from the date of testing or unless a significant change is made in the controller. If a significant change is made a new certification shall be submitted. A significant change shall be the addition or deletion of any function or feature in the control unit, or any major change to the circuitry in the control unit.

b. Certification of Environmental Testing

A certification shall be furnished with each control unit approval indicating it has been tested and is in accordance with the following tests from NEMA Standards TS-1-2.

- TS1-2.2.03- Test Procedure – Transients, Temperature, Voltage, and Humidity.
- TS1-2.2.04- Cabinet ventilation tests.
- TS1-2.2.07- Power interruption test.
- TS1-2.2.08- Timing accuracy tests.
- TS1-2.2.09- Signal conflict monitoring tests.

The cabinet requirements in 922.01(g) shall be applicable during the appropriate tests.

The certification shall specify the model and serial number of the following components: cabinet, controller main frame, phase modules, ring modules, conflict monitor, load switches, flasher, and all specified auxiliary control equipment.

A complete log of each test for every controller shall be maintained. The log shall show which, if any, controller component failed during the test, when it failed, and what steps were taken to repair the controller. The log shall include the date of testing, name and title of person conducting the tests, a record of conditions throughout the tests, and a temperature and humidity vs time chart. The maximum revolution of any chart shall be 24 h. The chart shall be from a recording machine used to monitor the status of the environmental chamber during testing.

7. Warranty

A standard manufacturer's warranty shall be furnished for each traffic signal control unit which is furnished and installed. The effective date for the beginning of the warranty shall be the turn-on date shown on form IC 636A. The warranty shall be provided prior to final acceptance.

Each traffic signal control unit purchased by the Department shall have a minimum two year operational warranty or the manufacturer's standard warranty, whichever is longer. The two year warranty shall begin on the date the control unit is received at the Logistical Support Center. The vendor or manufacturer shall be responsible, during the warranty period, for transportation costs to and from the Logistical Support Center for items requiring warranty service.

510

Continued failure and repeated malfunctions of an approved model of controller shall be cause to remove that model from the Department's list of approved Models.

(g) Cabinet Requirements for Traffic Signal Controllers

1. General

The cabinet and the shelf, if needed, shall be fabricated of aluminum. The cabinet shall be 0.125 in. (3 mm) minimum thickness sheet aluminum or 0.25 in. (6 mm) minimum thickness die-cast aluminum. The cabinet exterior and interior including shelves, shall have a sandblasted, roughened, or chemically etched finish that reduces gloss, reflection, and glare.

520

The main cabinet door shall use a Corbin Lock No. 2 and the lock shall be furnished with two No. 2 keys. The door shall be capable of being opened and stopped in at least the following two ranges of degree opening as measured from the face of the cabinet door on the hinged side, 80 to 100 degrees, and 150 to 180 degrees. The door shall be hinged on the left or right side of the cabinet.

The cabinet shall have a police door within the main door. The police door shall use a standard Corbin Police panel lock. The police door shall be weathertight. Two keys shall be furnished for the police door.

530

In a cabinet used for a pretimed controller, the police door shall contain three separate switches for controller operation, one for automatic or manual, one for signal or flash, and one for signal on or off. A 1/4 in. (6 mm) phone jack receptacle shall be connected to the proper circuits for manual control of any signal interval. The switches shall be protected from water when the door is opened.

In a cabinet used for actuated controllers, the police door shall contain two separate switches, one switch for master power cut-off and one switch to change automatic signal control to flashing control, or vice-versa. The switches shall be protected from water when the door is opened.

540

The cabinet shall contain one duplex convenience outlet and a switch controlled lamp receptacle. The convenience outlet shall be duplex, three prong, NEMA Type 5-15R grounding outlet in accordance with NEMA WD-6, with ground-fault circuit interruption as defined by the National Electrical Code. These units shall be protected with a 15 amp cartridge fuse wired ahead of the multi-breakers.

550 The cabinet shall contain a thermostatically controlled ventilating fan and a vent with a commercially classified uniform 1 in. (25 mm) thick filter. The vent size and filter size will be according to the provisions for the type of cabinet. The thermostat shall be manually adjustable from 70°F to 100°F (21°C to 38°C). The fan shall be mounted internally at the top and toward the front of the cabinet to exhaust out the front top lip of the controller. The fan shall be rated at a minimum of 100 ft³ (2.83 m³) per minute. The thermostat shall be located within 6 in. (150 mm) of the fan.

560 The cabinet shall contain a surge arrestor. The surge arrestor shall be wired behind the multi-breaker, in parallel with the 35 amp circuit breaker signal buss and in series with the 10 amp circuit breaker for the solid state electronic equipment such as controller, conflict monitor and detectors. The surge arrestor shall have a maximum clamp voltage of 350 volts at a peak current of 20,000 amps for a minimum of 20 occurrences. The surge arrestor will operate between -30°F to 165°F (-34°C to 74°C). The dimensions of the unit shall not exceed 3.25 in. (80 mm) wide by 6 in. (150 mm) long by 2.5 in. (64 mm) deep.

Each inductive device, including the fan, shall have a separate power surge protection.

570 The terminals for AC + and - input to the cabinet shall be capable of accepting a No. 6 wire.

Test inputs A and B shall not be used for any purpose that will prevent interchangeability of controllers manufactured in accordance with these specifications.

The manual flashing switch shall be wired to let the controller operate when the signals are flashing.

580 The cabinet shall contain a jack mounted type 3 solid state flasher in accordance with NEMA Standards TS1-8 or approved non-repairable unit in accordance with the NEMA Standards TS1-8 electrical and physical dimensions. Repairable flashers shall consist of opto or photo isolated solid state power relays.

Remote flashing shall be provided for all signal circuits. Phases that the controller is to initialize in green, shall be wired to flash yellow. All other phases shall be wired to flash red. Flashing for signal circuits shall be as evenly balanced as possible on the circuits of the flasher controller.

590 The cabinet shall be wired to activate the pedestrian timing, including load switches and all other necessary components. The pedestrian load switch and the signal load switch shall be a triple signal load switch in accordance with NEMA Standards TS1-5 or approved non-repairable units in accordance with NEMA Standards TS1-5 electrical and physical dimension requirements. Repairable load

switches shall consist of opto or photo isolated solid state power relays. The repairable load switch shall not use a printed circuit board to transmit the 115 volts AC line - in input or signal buss output. Each load switch shall have an indicator for each circuit indicating the status of the input to the load switch.

600

The load switch signal outputs shall be brought to a separate terminal strip for hook-up of the signal displays. Load switches shall be capable of being programmed for flash, overlap, vehicular, or pedestrian phases with the use of a standard slotted or Phillips screw driver or standard nut driver. Programming of the load switches shall be accomplished on the front of the cabinet terminal facilities by installing or removing electrical conductors.

610

The cabinet for a pretimed secondary controller used in a hardwired interconnect system shall contain a fuse block with a 2 amp fuse for the remote selection of each of the following inputs: Reset 1, Reset 2, Reset 3, Cycle 2, Cycle 3, Split 2, Split 3, and Flash. For an actuated controller, an additional input shall be provided for system or free operation. The fuse block shall have a 150 volt, 10 amp metal oxide varistor on the controller side of the fuse, connected to ground.

620

The cabinet for a pretimed master controller used in a hardwired interconnect system shall contain a fuse block with a 6 amp fuse for the output selection of each of the following inputs: Reset 1, Reset 2, Reset 3, Cycle 2, Cycle 3, Split 2, Split 3, and Flash. For an actuated controller, an additional output shall be provided for system or free operation. The fuse block shall have a 150 volt, 10 amp metal oxide varistors for each of the output selections, on the controller side of the fuse, connected to ground. The fuse block shall also have a 1.0 K ohms, 30 watt resistor for each of the output selections, on the interconnect side of the fuse, connected to ground.

630

The cabinet shall contain a main backpanel and supplementary backpanels, as needed. The model number of the main backpanel shall be permanently applied to the front of the backpanel, where it is easily readable, without removing or disconnecting the backpanel. Each controller input and output circuit shall terminate on the main backpanel or on a supplementary backpanel.

The cabinet shall contain auxiliary control devices such as conflict monitor, vehicle detectors, or other items specified. All terminal facilities and fusing within the cabinet shall be readily accessible for field connection without removing the controller or associated equipment. All equipment and terminals shall be readily accessible for maintenance in the cabinet. The backpanel shall be attached to the cabinet such that access to the backside of the backpanel, for maintenance purposes, shall be accomplished without the use of special tools or removal of auxiliary panels or other cabinet appurtenances.

640 **2. G Cabinet**

The G cabinet shall be pedestal mounted or pole mounted. The bottom of the cabinet shall be reinforced to ensure a secure pedestal mounting. The G cabinet shall have dimensions of 25 in. (635 mm) wide, 38 in. (965 mm) high, 18 in. (460 mm) deep with a tolerance of + 4 in. (100 mm) in all dimensions.

A cabinet slipfitter shall be used to attach the cabinet to the pedestal. The slipfitter shall fit a 4 1/2 in. (114 mm) outside diameter pipe and shall have a minimum of three set screws equally spaced around the slipfitter.

650 A vent of adequate size shall be provided. The size of the vent and the filter requirements shall be in accordance with the manufacturer's recommendations.

a. Cast Aluminum Pedestal Base

A pedestal mounted G cabinet shall have a cast aluminum pedestal base. The cabinet and pedestal base shall be ground mounted on a concrete type A foundation at locations and dimensions as shown on the plans.

660 The cast aluminum base shall be made of aluminum in accordance with ASTM B 179, alloy ANSI 319.1 or 319.2, or in accordance with ASTM B 26 (B 26M), alloy ANSI 356.0-T6. The square base shall include an access door and anchor bolts with nuts and washers. The base shall be 13 3/8 in. (8630 mm) square and 15 in. (380 mm) in height \pm 1 1/4 in. (32 mm). The weight shall be 22 lb \pm 5% (10.0 kg \pm 2.2 kg).

670 The base shall be designed to support a 150 lb (68 kg) axial load and 11 ft² (1.0 m²) of signal head area rigidly mounted. For design purposes, the distance from the bottom of the base to the center of the signal head area is 18 ft (5.5 m). In addition to the dead load, the base shall be designed to withstand wind load and ice loads on the specified signal head area and on all surfaces of the support, in accordance with the AASHTO Standard Specification for Structural Supports for Highway Signs, Luminaires, and Traffic Signals. Wind speeds used for design shall be based on a 10 year mean recurrence interval and a wind drag coefficient of 1.2 or as shown on the plans. The base shall contain an access door, which is 8 in. by 8 1/4 in. \pm 1/4 in. (200 mm by 210 mm \pm 6 mm) with a stainless steel hex head bolt for attaching the door.

680 The base shall be attached to a foundation by four anchor bolts, with an anchor bolt circle of 12 3/4 in. (324 mm). Slotted lugs shall be integrally cast into the four corners of the base for attachment of the anchor bolts. The anchor bolts shall be steel in accordance with ASTM A 36 (A 36M). The diameter of the anchor bolt shall be 3/4 in. (19 mm) with a minimum length of 18 in. \pm 1/2 in. (460 mm \pm 13 mm), plus 2 1/2 to 3 in. (64 to 75 mm) right angle hook on the unthreaded end. The top 4 in. (100 mm) of the bolt shall be threaded with 10 NC threads. The threads, plus 3 in. (75 mm), shall be coated after fabrication in accordance with ASTM A 153 or be mechanically galvanized and in accordance with the coating thickness, adherence,

and quality requirements of ASTM A 153, class C. Each anchor bolt shall be provided with two hex head nuts in accordance with ASTM A 325 (A 325M) and three washers. Two of the washers shall have a minimum 2 in. (50 mm) and maximum 2 1/8 in. (54 mm) outside diameter and be in accordance to ANSI B 27, 690 Type B regular series and one shall be a nominal 3/4 in. (19 mm) series W washer, in accordance with ASTM F 436 (F 436M).

The cast aluminum pedestal base shall be in accordance with the dimensions and requirements shown on the plans. The casting shall be true to pattern in form and dimensions; free from pouring faults, sponginess, cracks, and blowholes; and free from other defects in positions affecting the strength and value of the intended use for the casting. The base shall not have sharp unfilleted angles or corners. The surface shall have a workmanlike finish.

700 The door and bolt for the door shall be interchangeable on cast bases from the same manufacturer.

b. Pedestal Pole

The top of the base shall accommodate a pole having a 4 1/2 in. (114 mm) outside diameter. The threads inside the top of the base shall be 4 in. (100 mm) national standard pipe threads. The pole shall be either a steel pedestal pole or an aluminum pedestal pole.

710 A steel pedestal pole shall be a seamless schedule 40 carbon steel pipe in accordance with ASTM A 53, grade B. The pole shall have an outside diameter of 4 1/2 in. (114 mm). The pole shall weigh approximately 10.8 lb/ft (16 kg/m). The length of the pole shall be as shown on the plans. The pole shall have full depth national standard pipe threads on one end of the pole. The length of threads shall be 2 1/2 in. (64 mm). The pole shall be galvanized, after threading, in accordance with ASTM A 123. The threads shall be cleaned of all excess galvanizing and protected by a suitable shield.

720 An aluminum pedestal pole shall be in accordance with ASTM B 241 (B 241M) for seamless aluminum alloy, schedule 40, 6061-T6. The outside diameter of the pole shall be 4 1/2 in. (114 mm). The length of the pole shall be as shown on the plans. The pole shall weigh approximately 3.7 lb/ft (5.5 kg/m). The pole shall have full depth national standard pipe threads on one end of the pole. The length of threads shall be 2 1/2 in. (64 mm) and protected by a suitable shield. The pole shall have a spun finish.

c. Pole Cap

730 A pole cap shall be supplied for the top of the pole if the pole is used for the mounting of pedestrian signal faces or side mounted signal control cabinets. The pole cap shall be either a cast pole cap of aluminum or a pole cap of spun aluminum.

A cast pole cap shall be made of aluminum, in accordance with ASTM B 179, alloy ANSI 319.1 or 319.2. The cap shall fit freely on the 4 1/2 in. (114 mm) outside diameter of the pole. A set screw using a 3/4 in. (19 mm) No. 12 hex head machine screw shall be supplied to hold the cap on the pole. A standard foundry draft will be allowed on the casting.

A pole cap made from spun aluminum shall be in accordance with ASTM B 209 (B 209M), alloy 1100-0. The cap shall fit tightly when placed on the end of the pole.

740

3. M Cabinet

The M cabinet shall be ground mounted on a concrete foundation at locations and dimensions shown on the plans.

The M cabinet shall have dimensions of 30 in. (762 mm) wide, 48 in. (1219 mm) high, and 16 in. (406 mm) deep with a tolerance of ± 2 in. (50 mm) in any or all dimensions.

750

Anchor bolts shall be steel in accordance with ASTM A 36 (A 36M). Diameter of the bolt shall be 1/2 in. (13 mm) or 5/8 in. (16 mm) and the minimum length shall be 15 in. (381 mm) plus a 3 in. (75 mm) right angle hook on the unthreaded end. The top 6 in. (150 mm) of the bolt shall be threaded with 13 NC threads on 1/2 in. (13 mm) bolts and 11 NC threads on 5/8 in. (16 mm) bolts. The hexagon nut, the flat washer, and the threaded end of the bolt shall be galvanized in accordance with ASTM A 153, or be mechanically galvanized and in accordance with the coating thickness, adherence, and quality requirements of ASTM A 153, class C.

If an interrupter is shelf mounted, a shelf shall be located a minimum of 12 in. (305 mm) from the top of the cabinet but shall have adequate room to easily install or remove the interrupter.

760

The vent shall have a uniform 1 in. (25 mm) thick filter which may be of any of the following sizes: 20 in. by 10 in. (510 by 255 mm); 16 by 10 in. (405 by 255 mm); or 16 by 8 in. (405 by 200 mm).

770

The cabinet shall contain solid state load switches with incandescent lamp load rating of 1200 watts with nominal 120 volts 60 hertz which meet NEMA Standards TS1-5. Cabinets for pretimed controllers shall contain a type 6 conflict monitor and cabinets for actuated controllers shall contain a type 12 conflict monitor. Conflict monitors shall be in accordance with NEMA Standards TS1-6. The conflict monitor upon sensing conflicting signal indications or unsatisfactory operating voltage shall transfer the signals to a flashing indication and the controller shall be wired to provide flash transfer if the conflict monitor is removed from service. Each channel of the conflict monitor shall have an indicator to show the channel's on or off status.

A red failure indicator shall be provided, exclusively labeled red failure, and shall be continuously illuminated when red failure has occurred. The conflict

922.01

monitor shall indicate the channel where red failure occurred by means of the channel indicator.

- 780 The phase arrangement of the controller shall coincide with the channel arrangement of the load switches and conflict monitor.

- 790 The cabinet shall contain a multi-breaker with one 10 amp circuit breaker to provide overload protection to the controller, conflict monitor, and detectors and one 35 amp circuit breaker to provide overload protection to the signal and flash buss load. When both circuit breakers are in the off or tripped position, the signal output, the conflict monitor, and the controller shall be turned off. The signal shall be capable of operating in the flashing mode with the 10 amp circuit breaker OFF and the 35 amp circuit breaker ON. The controller, the conflict monitor, and the detectors shall be capable of operating with the 10 amp circuit breaker ON and the 35 amp circuit breaker OFF.

Two 1.0 microfarad 600 volts + 10% capacitors shall be installed on the output field terminal strip for left turn phases which are normally phases 1 and 3. One capacitor shall be connected from the green output terminal to AC negative terminal on each phase and the other capacitor shall be connected from the yellow output terminal to AC negative terminal on each phase.

- 800 The cabinet shall contain a type 3 solid state flasher in accordance with NEMA Standards TS1, Part 8. The flashing output circuits carrying the signal load shall consist of opto or photo isolated solid state power delays. Programmable flash shall be provided for on the cabinet terminal facilities. No special tools shall be required to program flash. Flashing for even numbered phases shall be placed on one circuit and flashing for odd numbered phases shall be placed on the other circuit.

- 810 The cabinet shall contain all terminal blocks, solid state load switch blocks, and harnesses necessary for the operation of the controller. It shall have two adjustable shelves with the first shelf located 15 in. \pm 1 in. (380 mm \pm 25 mm) below the top of the cabinet and the second shelf located 7 in. (178 mm) below the first shelf. The cabinet shall contain 30 spare terminals. The spares shall be in one location and easily accessible in the cabinet. If vehicle detection is required for a controller, the spare terminals may be used for this purpose.

- 820 Terminal strips shall be consecutively numbered and shall be in accordance with the schematic diagram. Numbering for terminal strips shall be neat and legible, silk screen type painting. All harnesses shall be of sufficient length to allow for the placement of the controller and conflict monitor at any location within the upper half of the cabinet. The shelf of the cabinet connector harnesses shall be grounded. All relays and conflict monitors shall be encased in a protective covering to reduce the potential of electrical shock.

The police panel shall contain two separate switches. One switch for master power cut-off and one switch to change operation from automatic signal control to flashing control, or vice-versa. The switches shall be protected from water when the door is in the open position.

4. P-1 Cabinet

830 The P-1 cabinet shall be ground mounted on a concrete foundation at locations and dimensions as shown on the plans with anchor bolts in accordance with 922.01(g)3. The P-1 cabinet shall house an 8 phase traffic actuated solid state digital controller and shall have two adjustable shelves with the first shelf located 20 in. (508 mm) below the top of the cabinet and the second located 7 in. (178 mm) below the first shelf. The cabinet shall be 44 in. (1118 mm) wide, 52 in. (1321 mm) high, and 24 in. (610 mm) deep with a tolerance of ± 3 in. (75 mm) in all dimensions. Maximum exterior dimensions shall be 34 in. (864 mm) deep, 47 in. (1194 mm) wide, and 63 in. (1600 mm) high.

840 The cabinet shall be in accordance with applicable provisions of 922.01(g)1 and 922.01(g)4. It shall have one type 12 conflict monitor which shall be in accordance with NEMA Standards TS-1, Part 6.

Two 1.0 microfarad 600 volt, 10% capacitors shall be installed on the output field terminal strip for the left turn phases which are normally phases 1, 3, 5, and 7. One capacitor shall be connected from the green output terminal to AC negative terminal on each phase, and the other capacitor shall be connected from the yellow output terminal to AC negative terminal on each phase.

850 The cabinet shall have a vent with a uniform 1 in. (25 mm) thick filter which may be of any of the following sizes: 16 by 25 in. (405 by 635 mm); 15 by 20 in. (380 by 510 mm); or 16 by 20 in. (405 by 510 mm). It shall contain 40 spare terminals.

(h) Two Circuit Alternating Flasher

Two circuit alternating flasher shall be solid state.

1. General

860 The solid state flasher shall periodically interrupt a source of alternating current line power. Solid state shall mean electrical circuits, the active components of which are semi-conductors, to the exclusion of electromechanical devices or tubes.

The flasher shall be a type 3 solid state flasher conforming to Section 8 of the NEMA Standards Publication TS 1-1983. The flasher output circuit carrying the signal load shall consist of opto or photo isolated solid state power relays and shall be hard wired to the flasher connector.

Three schematic diagrams and three descriptive parts lists shall be furnished with each flasher.

Two circuit alternating flashers shall be plug-in design. The flasher design shall not permit the unit to be inserted improperly into the plug-in base. The flasher shall have heavy-duty plugs and jacks capable of handling the rated load current. The rate of flash shall be 50 to 60 flashes per minute.

The flasher shall operate between 95 volts and 135 volts AC 60 Hertz. No degradation of performance shall be experienced in environmental changes from -20°F to 165°F (-29°C to 74°C) and 0 to 90% relative humidity.

2. Cabinet Requirements

The cabinet shall be weatherproof and fabricated from cast aluminum or aluminum sheeting with a minimum thickness of 0.125 in. (3.18 mm). The cabinet door shall be the entire front of the cabinet and shall be hinged on the right or left side of the cabinet. A Corbin No. 2 lock and two No. 2 keys shall be furnished. The lock shall be located near the center of the door on the side opposite the hinge.

Minimum dimensions for the cabinet shall be 12 in. (305 mm) deep, 12 in. (305 mm) wide, and 12 in. (305 mm) high. The maximum dimensions shall be 18 in. (460 mm) deep, 15 in. (380 mm) wide, and 18 in. (460 mm) high.

The cabinet shall have two pole plates for stainless steel band mounting of the cabinet on a pole with a minimum diameter of 4 in. (100 mm) and a maximum diameter of 18 in. (460 mm). Two hub plates for 1 in. (25 mm) diameter conduit shall be provided with gaskets, eight bolts at four bolts per plate, nuts, and washers for attaching the hub plates to the cabinet. The cabinet shall be drilled for the mounting of the pole plates or hub plates as shown on the plans.

It shall have a screened vent in the bottom with a minimum size of 1 3/4 in.² (1129 mm²). A fan and thermostat shall be located in the top of the cabinet. The fan shall have separate power surge protection. The thermostat shall be located within 6 in. (150 mm) of the fan and shall be adjustable between 70°F and 110°F (21°C and 43°C).

The panel in the cabinet shall be capable of being removed and reinstalled with simple hand tools. A 25 amp radio interference filter and surge arrestor in accordance with 922.01(g)1 wired ahead of a 15 amp circuit breaker shall be mounted on the panel. A terminal block capable of the following electrical connections shall be mounted on the panel.

910	Circuit 1 - for connection of field signals Circuit 2 - for connection of field signals AC plus - can be attached to breaker if circuit breaker can accept a No. 6 wire AC minus lug - capable of accepting a No. 6 wire Neutral lug - capable of accepting a No. 6 wire
-----	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Fan Circuit - adequately fused separately from circuit breaker with a fuse rating less than 15 amps

922.02 Interconnection Equipment

(a) Hardwire Interconnection

920

1. Electro-Mechanical Dial Coordination Unit

a. General

The coordinating unit shall operate and be compatible with a 2 phase, 4 phase, and 8 phase controller in accordance with 922.01(f). It shall function in an interconnect system containing three dial electro-mechanical controllers and actuated controllers and shall contain three background cycles that are programmable in length of time and percentage split.

930 The dial coordinating unit shall generate a continuous background cycle. With an absence of vehicle actuation, recall operation, or pedestrian actuations, the traffic signal controller shall continue to rest in the coordinated phase. During periods of heavy vehicular demands, the coordinating unit shall not permit transfer of right-of-way to non-coordinated phase or pedestrian until the background cycle is in the predetermined position. When there is insufficient vehicular demand to extend the phase to the force-off limit the unit shall allow an early return to the coordinated phase.

940 The interface between the coordinating unit and the actuated controller shall provide a yield/force-off type of coordination. The coordinated phase or phases shall yield and the remaining phases shall be forced off. The coordination unit shall operate in a coordinated system with the number of controller phases specified. The interface between the coordinator and the controller shall provide for Max I timing during coordinated operation. During non-coordinated, free run, operation, Max II timings shall be in effect.

950 The coordinating unit shall operate on 115 volt AC, 60 Hertz. It shall be shelf mounted and enclosed in a case with maximum dimensions of 19 in. (483 mm) wide, 7 1/2 in. (191 mm) high, and 8 in. (200 mm) deep. Three sets of wiring and schematic diagrams, three descriptive parts lists, and two instruction and maintenance manuals shall be furnished with each coordinating unit.

b. Additional Requirements for Master Locations

A master control unit shall include a dial coordinating unit interrupter and a dial coordinating unit master both compatible and able to function in an interconnected system containing 3 dial electro-mechanical controllers and actuated controllers.

The master control unit shall be capable of the following output selections: Reset 1, Reset 2, Reset 3, Dial 2, Dial 3, Flash, and coordinating free. The dial

922.03

- 960 coordinating unit master and the dial coordinating unit interrupter shall have the following 5 cycle length gears for each dial.

Dial 1	60-80-90-100-110 sec
Dial 2 & 3	70-75-85-95-110 sec

- 970 A master control unit shall contain a fuse block with a 6 amp fuse for the output selection of each of the following: Reset 1, Reset 2, Reset 3, Dial 2, Dial 3, Flash, Split 2, and Split 3. The fuse block shall have 10 amp metal oxide varistors for each of the output selections on the controller side of the fuse, connected to ground. The fuse block shall have 1000 ohm, 30 watt resistors for each of the output selections on the interconnect side of the fuse, connected to ground.

c. Additional Requirements for Secondary Locations

- 980 A secondary control unit shall contain a secondary dial coordinating unit compatible and able to function in an interconnect system containing three dial electro-mechanical and actuated controllers. The location shall be capable of the following input selections from a remote location: Reset 1, Reset 2, Reset 3, Dial 2, Dial 3, Flash, and coordinating free. Two switches within the secondary control unit shall be provided to manually select the following operations and labeled to show which operation is in effect. One switch shall select Dial 1, Dial 2, Dial 3, Time Clock, or System. The other switch shall select Coordination or Free Run. Secondary dial coordinating unit shall have the same 5 cycle length gears for each of the three dials as required by the master and interrupter dial coordinating units.

922.03 Blank

922.04 Signal Head Components

(a) Vehicle Signal Face

- 990 Vehicle signal faces shall be as shown on the plans. The components shall be in accordance with the latest standard of the Institute of Transportation Engineers for Adjustable Face Vehicular Traffic Control Signal Heads.

1. General

The signal faces shall be sectional in construction, requiring one section for each lens and furnished in the nominal size of 12 in. (305 mm). Each section of a face shall have a rectangular silhouette when viewed from the front or the rear.

2. Housing, Door, and Visor

- 1000 The top and bottom of each housing shall have an integral locking ring with 72 serrations to permit rotation of the signal housing in 5 degree increments. Hub openings in the top and bottom of the signal housing shall accommodate standard 1 1/2 in. (38 mm) bracket arms. The thickness of the hub at the top and bottom of the housing shall be a maximum of 1 in. (25 mm) and a minimum of 3/8 in. (10 mm). The 12 in. (305 mm) door shall have two simple locking devices. The door on the

hinged side shall be attached with hinge pins. Each lens shall have the standard cap type visor. All screws, latching bolts, locking devices, and hinge pins shall be stainless steel.

1010

3. Lens

The lens shall be made of plastic and shall be in accordance with ASTM D 788, grade 8; or ASTM D 3935. The index of refraction shall be between 1.48 and 1.59. The lens shall be uniformly colored throughout the body of the material, true to size and form, and free from any streaks, wrinkles, chips, or bubbles. The values of luminous transmission for the signal lens and the limits of chromaticity for the lens colors shall be in accordance with the latest standard of the Institute of Transportation Engineers for Adjustable Face Vehicular Traffic Control Signal Heads. The lens hole with the lens gasket in place shall be of sufficient size to accommodate a 12 in. (305 mm) diameter lens.

1020

4. Reflector Assembly

The reflector shall be made of Specular Alzak Aluminum. The reflector assembly shall be designed so that it is pivoted and can be swung out of the housing and easily removed without the use of tools. A neoprene gasket shall be provided between and completely around the reflector and the reflector frame and shall be reusable. The reflector frame shall be aluminum or plastic.

5. Lamp Receptacle and Wiring

1030

The lamp receptacle shall be fixed focus type, positioning the lamp filament at the correct focal point with respect to the reflector. The assembly shall be designed so the lamp socket can be rotated through 360 degrees into positions of adjustment for proper positioning of the lamp filament after relamping. The lamp socket shall be equipped with color coded wire either red, yellow, or green depending upon the lens color of the section. The socket wires shall be a minimum of 26 in. (660 mm) long, fixture wire No. 18 AWG or larger, 600 volts, with insulation designed to withstand 221°F (105°C). The conductor size, insulation type letter designation, and temperature rating shall be marked on the insulation or a material certification of compliance shall accompany each signal head combination. The wiring leads shall be terminated with screw spade lug type or female type connectors for ease of connection to the terminal block. The socket shall be equipped with a gasket to insure a dust tight fit between the socket and reflector.

1040

6. Section Coupling

Any method to connect two or more sections together may be used, if the following requirements are met.

- a. Two or more sections, when joined together, shall maintain structural integrity when loaded to Institute of Transportation Engineers Standards.

1050

- b. The opening between joined sections shall accommodate two 1/2 in. (13 mm) cables.
- c. The maximum length of bolts used to connect sections together shall be 4 in. (100 mm).

Nuts, bolts, or lock washers shall be galvanized in accordance with ASTM A 153 or be mechanically galvanized and be in accordance with the coating thickness, adherence, and quality requirements of ASTM A 153, class C.

1060

7. Terminal Block

The yellow section of the 3 section signal head shall be equipped with a 5 position terminal block for termination of field wiring. Each section shall have provisions for addition of an 8 position terminal block or two 5 position terminal blocks or one 5 position and one 3 position terminal block. The terminal block shall have a minimum spacing between screw connections of 1/2 in. (13 mm). The height of the insulating ridge between screw connections shall be a minimum of 19/32 in. (15 mm) from the base of the terminal blocks.

1070

8. Material Requirements

a. Polycarbonate Signal Head

The housing, door, and visor of the section shall be made of ultraviolet and heat stabilized polycarbonate. The color shall be permanently molded into the components except the inside surface of the visor shall be painted non-reflecting flat black. The color shall be yellow in accordance with 909.02(d)4.

b. Die-Cast Aluminum Signal Head

1080 The housing, door, and visor of the section shall be made of a die-cast, corrosion resistant, copper free, non-ferrous metal which shall be in accordance with ASTM B 85. All surfaces of the housing, doors, and visor shall receive a prime coat of zinc chromate paint in accordance with 909.02(a) or shall be anodized with a chromate aluminum oxide coating process. The finish shall be highway yellow enamel, two coats, oven baked and in accordance with 909.02(b) except the inside surface of the visor shall be painted non-reflecting flat black.

9. Certification

1090 A material certification in accordance with the applicable provisions of 916 shall accompany each order certifying that a signal head from a normal production run within the past 12 months, passed the Institute of Transportation Engineers criteria for breaking strength and deflection. Deflection testing is not required in the certification for polycarbonate signal heads.

(b) Pedestrian Signal Head

A pedestrian signal shall be one section and rectangular in shape. The dimensions of each side may vary from 18 to 19 in. (460 to 485 mm), including the

- visor and the hinges. The signal shall contain two figures with two different colored messages. The left figure shall transmit an upraised hand symbol message, and the right figure shall transmit a walking person symbol message. The pedestrian signal shall be in accordance with the standard of the Institute of Transportation Engineers for Pedestrian Traffic Control Signal Indications.

1. Housing, Door, and Visor

- The housing shall be equipped with mounting device hardware, such as clamshell, and round openings at top and bottom for mounting with brackets made of iron pipe standard, to fit the 1 1/2 in. (38 mm) pipe. The openings shall have a common vertical centerline through the housing to permit 360 degrees rotation after it is mounted. The openings shall have a serrated ring which permits locking of the housing in 5 degree increments throughout the entire 360 degrees of rotation. The brackets or the clamshell shall serve as the electrical conduit for the pedestrian signal. The housing shall be made of die cast, corrosion resistant, copper free, non-ferrous metal which shall be in accordance with ASTM B 85.

The door on the front of the housing may be hinged from any side. The door shall be gasketed to maintain a weather-tight enclosure when secured to the housing. The door and the visor shall be made of the same material as the housing or of polycarbonate. All materials shall be clean, smooth, and free from flaws, cracks, blowholes, or other imperfections.

- The exterior of the housing shall be Federal yellow in color. The polycarbonate components shall be black in color impregnated throughout. The metal components shall be painted with enamel in accordance with 909.02(b).

- Each signal shall be provided with a visor. The visor shall consist of a minimum of 20 horizontal and 20 diagonal equally spaced louvers. Every other formed louver shall be reversed to provide diamond shaped cells each having a minimum area of 1 in.² (650 mm²). The louvers shall be made of impregnated black polycarbonate plastic processed with a flat finish on both sides, to eliminate sun phantom. The door and visor assembly shall be attached to the housing by means of stainless steel screws and nuts.

2. Optical Unit

The optical unit shall consist of the redirecting lens, the lamp, a reflector, a filter, and other optical elements necessary for proper operation. The optical unit shall be designed to minimize the return of the outside light rays entering the unit, such as sun phantom. The optical unit shall be designed and assembled so that no light escapes from one message unit to the other.

- The values of luminous transmission for pedestrian signal lenses and the limits of chromaticity for pedestrian signal colors shall be in accordance with the standard of the Institute of Transportation Engineers for Pedestrian Traffic Control Signal Indications.

3. Lens

The lens shall be made of plastic. The lens shall be in accordance with ASTM D 788, grade 8; or ASTM D 3935. However, the index of refraction shall be between 1.48 and 1.53. As required by the type of pedestrian signal, the lens shall be uniformly clear or colored throughout the body of the material, true to size and form and free from any streaks, wrinkles, chips, or bubbles.

1150

4. Message

When illuminated, the upraised hand symbol shall be in Portland Orange on the left surface of the signal indications. The walking person symbol shall appear in white on the right surface of the signal indication when illuminated. The upraised hand and walking person symbols shall each be a minimum of 11 in. (280 mm) in height. The width of the upraised hand symbol shall be a minimum of 7 in. (178 mm). The width of the walking person symbol shall be a minimum of 6 in. (150 mm). Message configuration, color, and size shall be in accordance with the standard of the Institute of Traffic Engineers for Pedestrian Traffic Control

1160 Indications.

5. Reflector Assembly

The reflector shall be a double parabolic type, made of textured polycarbonate plastic sheet coated with aluminum, or made of specular Alzak Aluminum with bead or flange on the outer edge to stiffen the reflector and ensure the true shape. The reflecting surface shall be free of flaws, scratches, defacements, or mechanical distortion.

1170 The 2 sections of the reflector shall be divided by a full depth divider which properly mates with the message lens to effectively prevent light spillage from one section to the other.

6. Light Distribution

The illuminated signal shall be uniformly illuminated over the entire message surface without shadows when viewed from usual angles encountered in service. The upraised hand and walking person symbols shall not appear to be illuminated portions of the lens. When not illuminated, the upraised hand and walking person symbols shall not appear to be illuminated by external light sources when viewed from the far end of the crosswalk. The pedestrian indication shall be visible to the pedestrian at all times at all distances from 10 ft (3 m) to the full width of the street to be crossed.

1180

7. Electrical

The signal shall be equipped with a lamp and a socket for each of the 2 sections of the double parabolic reflector. The lamp receptacle shall be of heat resisting material. The lamp receptacle shall be provided with a grip to prevent the receptacle from working loose due to vibration. Each lamp shall be traffic signal lamp type A

21. The metal portion of the lamp receptacle shall be compatible with brass or copper.

1190

Each pedestrian signal shall be completely wired internally, and ready for connection of the field wiring. A suitable terminal block for connection of the internal wiring and the incoming field wires to the pedestrian signal head shall be provided in the signal housing.

The light source shall be designed and constructed so that if an electrical or mechanical failure occurs, the upraised hand and walking person symbols shall also remain dark.

1200

(c) Disconnect Hanger Junction Box

Traffic signal disconnect hanger junction boxes shall consist of a span hanger, a balance adjuster, a disconnect hanger clevis, and a housing with a hinged door with a positive latching device. The span hanger balance adjuster, and all related hardware shall be galvanized in accordance with ASTM A 153 or be mechanically galvanized and conform to the coating thickness, adherence, and quality requirements of ASTM A 153. The housing shall be made of a die-cast, corrosion resistant, copper free, non-ferrous metal which shall be in accordance with ASTM B 85. The balance adjuster fitting shall be made of ferrous or non-ferrous metal. When made of ferrous metal it shall be galvanized in accordance with the requirements for the components

1210

and related hardware as set out above.

The disconnect hanger shall be designed so that the maximum allowable space or play between the span hanger and the eye-bolt of the balance adjuster and between the balance adjuster and the disconnect hanger clevis, at points where they are attached to each other by rivet or hex head bolts and nuts with lock washers, shall be 0.062 in. (1.6 mm). The span hanger bolt where the eye-bolt or the balance adjuster is attached shall be 5/8 in. (16 mm) diameter.

1220

When serrated locking rings are not integrally cast in the components, the component and locking ring shall be designed so that when the locking ring is placed flush against the component, the component and locking ring shall not rotate or slide when torque is applied. The serrated components shall have 72 serrations to permit rotation of the disconnect hanger clevis, hub plate, or signal head in five degree increments. There shall be no thread in contact with a wearing surface. Locking rings shall have a minimum thickness of 3/16 in. (4.8 mm) and a maximum thickness of 1/4 in. (6.4 mm) from the base of the ring to the serration peaks. The inside diameter shall be 2 in. (50 mm) and the outside diameter shall be 2 7/8 in. (73 mm).

1230

The terminal block shall have an 18 point terminal block permanently engraved or etched with sequential numbers indicating the circuits. The terminal block shall not have a method of connection which allows a screw point to damage wires when the wires are securely connected. Each point of connection shall accommodate a minimum of four No. 14 gauge (2.0 mm) wires.

The disconnect hanger shall have two side entrance holes on opposite sides capable of receiving a 1 1/2 in. (38 mm) plastic or rubber insert to reduce water infiltration. It shall be capable of supporting signal faces in the ambient temperature range of -30°F to 120°F (-35°C to 49°C) without failure.

- 1240 The balance adjuster shall have hex head bolts, lock washers, and nuts for securing the main body of the balance adjuster firmly onto and around the eye-bolt to prevent any twisting or turning of the head suspended below it. The span hanger shall have two J-bolts, lock washers, and hex head nuts adequate in size to securely fasten the hanger to a messenger cable up to 1/2 in. (13 mm) in diameter.

A type C certification in accordance with 916 shall be provided.

(d) Signal Bulbs

- 1250 The minimum design requirements for light bulbs to be used in a traffic signal face shall be in accordance with the Institute of Transportation Engineers standard for Traffic Signal Bulbs and as follows.

1. Bulbs shall be 67 watt, 116 watt, or 150 watt for different kinds of indications, as specified below.

	INDICATION	WATTAGE
	9 in. (230 mm) pedestrian	67
	12 in. (305 mm) and 18 in. (455 mm) pedestrian	116
1260	8 in. (200 mm) red, yellow, and green	67
	12 in. (305 mm) red	150
	12 in. (305 mm) yellow and green	116
	12 in. (305 mm) yellow and green arrows	150
	optically programmed heads	150

2. All bulbs shall have medium size, brass bases.
3. Bulbs shall be designed for use in a horizontal position or a base down position.
- 1270 4. The light center length shall be 2 7/16 in. (62 mm) for 67 watt bulbs and 3 in. (75 mm) for 116 watt and 150 watt bulbs.
5. The filament shall be C9 design with a minimum of seven supports. The two voltage supply leads may be counted as two of the seven supports.

1280

6. The maximum, overall bulb length for 67 watt and 116 watt bulbs shall be 4 3/8 in. (111 mm) and for 150 watt bulbs shall be 4 3/4 in. (120 mm).
7. All bulbs shall be clear and shall be 130 volt.
8. The 150 watt bulb shall be P25 or A21 size and shape.
9. The 67 watt and 116 watt bulbs shall be A21 size and shape.
10. All bulbs shall have 6000 h minimum burning life.

1290

(e) Free Swinging Signal Support Assemblies

The maximum allowable space or play between the hanger assembly and the eyebolt of the balance adjuster and between the balance adjuster and the weatherhead clevis, at points where they are attached to each other by rivet pins or hex head bolts and nuts with lock washers, shall be 0.062 in. (1.6 mm). No bushings or shims will be allowed in this assembly.

The balance adjuster shall consist of a hex head bolt, a lock washer, and nuts for securing the main body of the balance adjuster onto and around the threads of the eye-bolt to prevent any twisting or turning of the adjuster.

1300

The span hanger, balance adjuster, weatherhead, and all related hardware shall be made of non-corrosive metal or shall be galvanized in accordance with ASTM A 153 or be mechanically galvanized and conform to the coating thickness, adherence, and quality requirements of ASTM A 153. The weatherhead shall have a minimum of 2 1/2 in. (64 mm) of exposed threads. The weatherhead shall have two set screws to fasten the nipple to the weatherhead. If the weatherhead and threaded pipe has a slipin connection, the locking device shall be a double nut assembly. If the weatherhead and threaded pipe has a screw-in connection, the locking device shall be a double set screw assembly.

1310

The span hanger shall be furnished with two each of J-bolts, lock washers, and hex head nuts. The J-bolt shall be a minimum of 1/4 in. (6.4 mm) diameter and shall have sufficient threads to be able to secure the hanger to a 1/4 in. (6.4 mm) or a 1/2 in. (13 mm) messenger cable. The multiple pipe arm assembly shall consist of a span hanger assembly, a balance adjuster, a signal weatherhead, a 2, 3, or 4 way pipe arm, 1 1/2 in. (38 mm) pipe, a lower arm assembly, and all related hardware necessary for a complete assembly.

1320

The 2, 3, or 4 way pipe arms shall have a minimum of 2 in. (50 mm) of exposed thread. Each arm of the pipe arm shall be furnished with two 72 serration locking rings. One locking ring shall have a 3 in. (75 mm) outside diameter and one locking ring shall have a 2 3/8 in. (60 mm) outside diameter.

ASSEMBLY

MAXIMUM ALLOWABLE WEIGHT

2 Way	19 lb (8.6 kg)
3 Way	25 lb (11.3 kg)
4 Way	28 lb (12.7 kg)

1330 **(f) Mid-Mast Arm Mount Signal Bracket**

The bracket shall permit the following four adjustments.

1. rotational adjustment about bracket axis;
2. vertical adjustment;
3. rotational adjustment about mast arm; and
4. rotational adjustment right and left from vertical plane

1340

The bracket shall be fastened to the supporting arm or structure with stainless steel bands. The bracket shall adjust to fit all sizes of round, octagonal, elliptical, or other shape structure without special tools or equipment.

The bracket shall attach to the signal by clamping the signal head both top and bottom and shall be designed to accommodate the specified signal configuration. Each bracket shall be complete with all necessary hardware to attach the traffic signal to the bracket and the bracket to the support.

1350 All electrical wiring shall be concealed within the bracket, except that which runs from the bracket to the mast arm.

Upper and lower arms shall be cast from aluminum in accordance with ASTM B 26 (B 26M), alloy 713.0-T5 or 356.0-T6. The vertical support tube shall be extruded from aluminum in accordance with ASTM B 241 (B 241M), alloy 6063-T6 or 6061-T6, and the strapping to attach the bracket to the arm shall be stainless steel. All steel or malleable iron parts shall be galvanized in accordance with ASTM A 153 or be mechanically galvanized and conform to the coating thickness, adherence, and quality requirements of ASTM A 153.

1360

(g) Pedestal Mounted Control Cabinets or Pedestrian Signal Heads

The pedestal base used for mounting pedestrian signal heads or control cabinets shall be in accordance with 922.01(g)2a. The length of the pedestal pole shall be as shown on the plans.

922.05 Signal Support

(a) Steel Strain Pole

1370 The steel strain pole shall be an anchor base type pole and shall include a handhole and a pole top or cap. The poles shall be furnished in lengths specified.

The pole shall have a reinforced handhole within 18 in. (460 mm) of the base. The minimum size shall be 5 in. (130 mm) by 8 in. (200 mm) with a cover and latching device. The pole shall have a top or cap with a set screw that can be removed with small hand tools.

The pole material shall be in accordance with ASTM A 595 or A 572 with a minimum yield strength of 50,000 psi (345 MPa). The pole shall be galvanized after fabrication in accordance with ASTM A 123.

1380

All hardware, handhole cover and latching device, band type steel pole bands, steel bolts, nuts, and washers shall be galvanized in accordance with ASTM A 153 or be mechanically galvanized and conform to the coating thickness, adherence, and quality requirements of ASTM A 153. All nuts and bolts, except anchor bolts, shall be in accordance with ASTM A 307. If a cast pole top or cap is used it shall be in accordance with ASTM A 126 and shall be galvanized with a minimum coating of 2 oz/ft² (0.610 kg/m²).

1390 The pole bands shall fit the pole as planned. The wire rope shall not be in contact with any 90 degrees edges or with any threads on the band. The pole band material shall be in accordance with ASTM A 572, grade 50 (A 572M, grade 345); ASTM A 606; or ASTM A 36 (A 36M) with a minimum yield of 50,000 psi (345 MPa). The minimum width of the bands shall be 3 in. (75 mm) and the bands shall be capable of supporting the pole design load. Each half of the band shall be stamped with the corresponding size number.

1400 All welding shall be in accordance with 711.32. Welds shall generate the full strength of the shaft. Only longitudinal continuous welding shall be permitted on the pole shaft. Contacting joint surfaces shall be thoroughly cleaned before fabrication then completely sealed by means of welding. Shop drawings shall be submitted in accordance with 922.05(c)9.

The pipe coupling for the weatherhead and base plate shall be installed prior to galvanizing. The threads shall be cleaned of all excess galvanizing. An internal J-hook shall be installed near the top of the pole for wire support.

1410 The steel strain pole shall be capable of supporting an 8000 lb (35.6 kN) load applied horizontally 18 in. (460 mm) below the top of the pole with a maximum allowable deflection of 0.16 in. (4.1 mm) per 100 lb (445 N) of load. The pole shall be tapered 0.14 in. per foot (12 mm per meter) of length.

A one piece base plate shall be secured to the base of the pole and shall develop the full strength of the pole. The base plate material shall be in accordance with

ASTM A 36 (A 36M), A 572 (A 572M), or A 588 (A 588M). The base plate shall have four holes of adequate size to accommodate 2 1/4 in. (57 mm) anchor bolts. The bolt circle shall have a 22 in. (560 mm) diameter and bolt square of 15 1/2 in. (394 mm).

- Four high strength steel anchor bolts, 2 1/4 in. (57 mm) diameter and 96 in. (2400 mm) long, including the hook, shall be furnished with each pole. Each bolt shall have two hex nuts and two washers in accordance with ASTM A 307, grade A. The anchor bolt material shall be in accordance with ASTM A 576 or ASTM A 675 (A 675M) with a minimum yield strength of 55,000 psi (379 MPa) or ASTM A 36 (A 36M), special quality, modified to 55,000 psi (379 MPa) or approved equal. The threaded end of the anchor bolt shall have 12 in. (305 mm) of 4 1/2 NC threads and shall be galvanized the length of the threads, plus 3 in. (75 mm). The threaded end shall be coated after fabrication in accordance with ASTM A 153 or be mechanically galvanized and be in accordance with the coating thickness, adherence, and quality requirements of ASTM A 153, class C. The unthreaded end of the anchor bolt shall have a standard L bend for a distance of 9 in. (230 mm) from the centerline of the anchor bolt to the end of the L. In lieu of the standard bend, a steel plate 4 1/2 in.² (2900 mm²) and 1 1/4 in. (32 mm) thick may be welded to the embedded end of the anchor bolt.

(b) Wood Strain Pole

Wood strain poles shall be made from southern yellow pine and shall be in accordance with the current ANSI Specifications and Dimensions for Wood Poles No. 05.1. They shall be of the length and class specified.

- 1440 All poles shall be full length pressure treated by the full cell process in accordance with current specifications as set forth in the AWWA Standards C1 and C4, using preservative as outlined in standard P5 and set forth in 911.02(h).

Treatment, handling, and storage methods shall be in accordance with the current AWWA Standards.

(c) Signal Cantilever Structures

1. General

- 1450 A signal cantilever structure shall be designed in accordance with the latest AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals, except where modified herein.

Where the manufacturer has wind tunnel test data, he may use drag coefficients based on actual tests. Otherwise, the manufacturer shall use the drag coefficients in Table 1.2.5c.

2. Signal Support

1460 The traffic signal pole and mast arm shall be designed to support the loads in accordance with the plans in an 80 mph (129 km/h) wind with gusts to 104 mph (167 km/h). Loading shall assume diecast aluminum heads.

1470 The traffic signal pole and mast arm shall be designed to provide a 17 ft (5.3 m) minimum clearance at all signals. Clearance shall be the vertical distance from the lowest point of the signal combination to a horizontal plane 3 in. (75 mm) below the base of the mast arm pole or from the lowest point of the signal combination to the pavement surface below the signal combination, whichever governs. Adjustment of the clearance at the installation site shall be by raising or lowering the mast arm along the upper length of the pole. After the pole is anchored to the foundation, the pole design shall permit the mast arm to be rotated 90 degrees in either direction and secured. The cable inlet shall not be obstructed when a field rotation or vertical adjustment of the mast arm is made.

There shall be no threads in the wearing surface plane at the point of connection between the clevis clamp and the signal face assembly. The clevis clamp shall have a 11/16 in. (18 mm) diameter bolt hole to receive the signal face assembly.

3. Combination Signal-Luminaire Support

1480 All requirements for a signal support shall apply to a combination signal-luminaire support.

The minimum design load of the luminaire shall be 53 lb (24 kg) with a projected surface area subject to wind loading of 2.4 ft² (0.223 m²). If heavier or larger luminaires are used, their actual values shall be used. The required luminaire mounting height shall be in accordance with the plans. Mounting height shall be defined as the vertical distance from the lowest point of the luminaire to the horizontal plane which passes through the base of the pole.

1490 The maximum percentage of allowable stress shall be 80% of the AASHTO Standard Specifications for Group 1 loads. Vibration dampers shall be furnished as recommended by the manufacturer.

4. Pole Requirements

a. General

1500 The pole shall be a round or multi-sided tapered tube, except the upper 4 to 6 ft (1.2 to 1.8 m) of a signal support pole may be non-tapered. The signal support pole shall have a reinforced handhole 4 in. (100 mm) by 6 in. (150 mm) minimum complete with cover and latching device located 18 in. (460 mm) above the base. A 1/2 in. (13 mm) 13 NC threaded grounding nut or approved equivalent shall be provided and be accessible through the handhole. The pole cap shall be secured in place with set screws. The combination signal-luminaire pole shall have a reinforced handhole 4 in. (100 mm) by 8 in. (200 mm) minimum complete with cover and

latching device, located 18 in. (460 mm) above the base. The combination signal-luminaire pole shall be provided with a removable pole cap and integral wire support hook for the luminaire electrical cable. The cable shall be attached to the hook by a service drop clamp. A wiring hole with a 1 in. (25 mm) to 1 1/2 in. (38 mm) inside diameter grommet shall be provided where the luminaire mast arm attaches to the pole.

1510

b. Deflection

The maximum allowable horizontal deflection of the pole under maximum loading conditions shall not exceed a deflection angle of one degree 10 min from the vertical axis of the pole for any 1 ft (305 mm) section of the pole along the entire length of the pole.

c. Materials

The signal pole and the combination signal-luminaire pole shall be steel or aluminum. Steel poles shall be in accordance with ASTM A 595 or A 572 with a minimum yield strength of 50, 000 psi (345 MPa) and shall be galvanized in accordance with ASTM A 123. Aluminum poles shall be in accordance with ASTM B 221 (B 221M) alloy 6063-T6 or 6005-T5, or ASTM B 241 (B 241M), alloy 6063-T6.

1520

d. Hardware

All hardware for steel poles except bolts for the mast arm clamps and anchor bolts shall be in accordance with ASTM A 307 and shall be galvanized in accordance with ASTM A 153 or be mechanically galvanized and conform to the coating thickness, adherence, and quality requirements of ASTM A 153, class C. A cast pole cap shall be in accordance with ASTM A 126 and shall be galvanized with a minimum coating of 2 oz/ft² (0.610 kg/m²).

1530

All hardware for aluminum poles shall be stainless steel in accordance with ASTM A 276, type 304 or type 305.

e. Anchor Base

A one piece anchor base shall be secured to the lower end of the pole and shall develop the full strength of the pole. The base shall be provided with four holes of adequate size to accommodate 1 1/4 in. (32 mm) anchor bolts equally spaced on a bolt circle of 15 in. (380 mm) diameter and shall have four tapped holes for attaching the bolt covers. Four removable bolt covers shall be provided with each base and each cover shall attach to the upright portion of the body of the base by means of one hex head cap screw. The steel for the anchor base shall be in accordance with ASTM A 36 (A 36M), A 572 (A 572M), or A 588 (A 588M). Aluminum for the anchor base shall be in accordance with ASTM B 26, alloy 356.0-T6 or 356.0-T7 or ASTM B 209, alloy 6061-T6.

1540

5. Arm Requirements

1550

a. Signal Cantilever Arm

A signal cantilever arm shall be attached to the pole by circular clamps. One-half of the clamp shall be welded to the cantilever arm. The single member arm or the upper tapered member of the truss style arm shall have a cable inlet adjacent to the clamp complete with grommet. The cable inlet shall be a 1 3/4 in. (44 mm) diameter hole with a 1 1/2 in. (38 mm) inside diameter rubber grommet. The 20, 25, and 30 ft (6.1, 7.6, and 9.2 m) cantilever arms shall have one intermediate cable inlet with grommet located 12 ft (3.7 m) from the free end of the arm. The 35 and 40 ft (10.7 and 12.2 m) cantilever arm shall have two intermediate cable inlets with grommets located 12 ft (3.7 m) and 24 ft (7.3 m) respectively from the free end of the arm. The intermediate cable inlet shall be a 1 in. (25 mm) diameter hole with a 3/4 in. (19 mm) inside diameter rubber grommet.

1560

The maximum rise of the single member arm shall be 1/2 in. (13 mm) per 1 ft (305 mm) of arm after loading. The maximum rise of the truss style arm shall be as set out in the table. The rise shall be measured vertically from the centerline of the free end of the truss to a plane through the centerline of the upper arm bracket after loading.

Mast Arm Length ft (m)	Total Rise ft - in. (m)	Tolerance in. (mm)
12 - 20 (3.7 - 6.1)	4 - 0 (1.2)	± 1 (± 25)
25 (7.6)	4 - 3 (1.3)	± 1 (± 25)
30 - 40 (9.2 - 12.2)	4 - 7 (1.4)	± 1 (± 25)

1570

The end signals on the truss style arms shall be suspended and the intermediate signals shall be rigidly attached. All signals on the single member arms shall be rigidly attached as shown on the plans. The cantilever arms shall be used as an enclosed raceway for wiring and shall be free of burrs and rough edges.

Both parts of the clamp for the single member arms shall be stamped with the arm length prior to galvanizing.

b. Luminaire Mast Arm for Combination Support

The luminaire mast arm shall be in accordance with 920.01(a)1.

1580

c. Materials

The signal mast arm shall be of the same material as the pole. The luminaire mast arm shall be of the same material as the pole except that a truss type arm shall be in accordance with 920.01(a). Bolts for the mast arm clamp shall be stainless steel in accordance with ASTM A 276, type 304 or 305.

6. Anchor Bolts

Four steel anchor bolts, each fitted with two hex nuts and two flat washers, shall be furnished with each pole. The anchor bolt shall be 1 1/4 in. (32 mm) diameter with a minimum of 10 in. (254 mm) of 7 NC threads on the upper end. The threads,

1590

nuts, and washers shall be galvanized in accordance with ASTM A 153 or be mechanically galvanized and conform to the coating thickness, adherence, and quality requirements of ASTM A 153. The anchor bolt shall be 48 in. (1220 mm) long with a 4 in. (100 mm) right angle bend on the lower end or a square steel washer, 6 in. by 6 in. by 1/2 in. (150 mm by 150 mm by 13 mm), with a hex nut welded onto the lower end. The steel for the bolt shall be in accordance with ASTM A 576, or ASTM A 675 (A 675M), with a minimum yield strength of 55,000 psi (379 MPa), or ASTM A 36 (A 36M), special quality, modified to 55,000 psi (379 MPa) or approved equal.

1600

7. Finish

All steel material shall be fully galvanized. Galvanizing shall take place after all welding is accomplished. Aluminum poles shall be provided with a satin finish accomplished by mechanical rotary grinding and aluminum mast arms shall be provided with a satin etched finish.

8. Certification

Unless otherwise specified, all materials covered herein shall be covered by a type C certification in accordance with 916.

1610

9. Shop Drawings

Five sets of shop drawings and a set of design calculations shall be submitted to the Design Division for approval. A copy of the transmittal letter shall be sent to the Engineer. The approved drawings will be distributed by the Design Division.

(d) Downguys, Anchors, Rods, and Guards

Pole anchors shall be 8 way expanding with a minimum area of 135 in.² (87 100 mm²) when expanded or a 10 in. (250 mm) diameter screw anchor. They shall have a minimum holding strength of 10,000 lb (44.5 kN). They shall be painted and in accordance with ASTM A 1011 (A 1011M). Anchor rods for expanded anchors shall be 3/4 in. (19 mm) diameter steel and for screw anchors shall be 1 1/4 in. (32 mm) diameter steel, 8 ft (2.4 m) long, in accordance with ASTM A 659 (A 659M), and be galvanized in accordance with ASTM A 153.

1620

Guy guards shall be made of 18 gauge galvanized steel, polyethylene, polyvinylchloride, or melamine phenolic, and shall be 7 ft (2.1 m) long. The steel guy guard shall have a tight gripping, non-scarring hook for quick attachment to the guy wire. The bottom shall have a clamp that fits over the anchor rod and securely grips by tightening the bolt. Steel guy guards shall be in accordance with ASTM A 659 (A 659M). The non-metallic guy guard shall be a helical pigtail which shall resist upward movement, a lock strap to secure the lower end, and a guy guard sleeve. Non-metallic guy guards shall be gray or yellow.

1630

922.06 Traffic Cable

(a) Messenger Cable

Messenger cable shall be zinc-coated steel wire strand, contain seven wires, and have a nominal diameter of 3/8 in. (10 mm). The cable shall be in accordance with ASTM A 475, Siemens-Martin Grade.

1640

(b) Span, Catenary, and Downguy Cable

Span, catenary, and downguy cable shall be aircraft cable for non-aircraft use, and shall be 3/8 in. (10 mm) nominal diameter, made of stainless steel wire, and consist of seven, 19 wire steel strands. The 3/8 in. (10 mm) cable shall have a minimum breaking strength of 12,000 lb (53.4 kN). It shall be in accordance with Military Specifications MIL-W-1511.

(c) Tether and Support Cable

1650 Tether and support cable shall be aircraft cable, for non-aircraft use, and shall be 1/8 in. (3 mm) nominal diameter, made of stainless steel wire, and consist of seven, 7 wire flexible steel strands. The 1/8 in. (3 mm) cable shall have a minimum breaking strength of 1700 lb (7560 N). It shall be in accordance with Military Specifications MIL-W-1511.

(d) Cable Hardware

1. Messenger Hangers

1660 Messenger hangers shall be either a three bolt clamp or a 3/8 in. (10 mm) by 1 3/4 in. (44 mm) steel hanger with a 90 degree bend extending from the pole 3 3/4 in. (95 mm). The hanger shall have a curved groove and clamp capable of receiving a 5/16 in. to 1/2 in. (8 mm to 13 mm) cable.

The messenger shall be clamped by two 1/2 in. (13 mm) high carbon steel bolts. The angle hanger shall be mounted with a 5/8 in. (16 mm) through bolt and a 1/2 in. (13 mm) lag screw. The three bolt clamp shall be mounted with a 5/8 in. (16 mm) through bolt. The angle hanger shall be in accordance with ASTM A 575. The bolts shall be in accordance with NEMA PH 23.

2. Cable Ring

1670 Cable rings shall be galvanized steel in accordance with IMSA 51-1.

3. Clamps

Clamps shall be made of 3/8 in. (10 mm) steel and in accordance with ASTM A 575.

Two bolt clamps shall be a minimum of 3 3/4 in. (95 mm) long and 1 1/4 in. (32 mm) wide with two 1/2 in. (13 mm) bolts which shall clamp cable of 1/8 to 1/2 in. (3 to 13 mm) diameter.

922.06

- 1680 Three bolt clamps shall be a minimum of 6 in. (150 mm) long and 1 5/8 in. (42 mm) wide with three 5/8 in. (16 mm) bolts which shall clamp cable of 5/16 to 1/2 in. (8 to 13 mm) diameter.

The bolt heads shall be large enough to provide maximum clamping area and shall have oval shoulders to prevent the bolts from turning while tightening. The bolts shall be in accordance with NEMA PH 23.

4. Servi-Sleeves

- 1690 Servi-sleeves shall be 1 1/4 in. to 2 1/4 in. (32 mm to 57 mm) in length and shall hold the size of the cable specified. The sleeves shall be in accordance with ASTM A 659 (A 659M).

5. Straight Eye-Bolts

Straight eye-bolts shall be 3/4 in. (19 mm) diameter drop forged steel, a minimum of 14 in. (356 mm) long, and have 6 in. (150 mm) of thread. The steel washers shall be 2 1/4 in. (57 mm) by 2 1/4 in. (57 mm) by 3/16 in. (5 mm) in size with 13/16 in. (21 mm) hole in the center. All parts shall be in accordance with ASTM A 575 and shall be galvanized in accordance with ASTM A 123.

- 1700 **6. Hub-Eyes**

Hub-eyes shall be made of drop forged steel and in accordance with ASTM A 575. They shall receive a 3/4 in. (19 mm) mounting bolt and have a full rounded thimble eye for protection of the guy cable.

(e) Signal Cable

1. Hook-up Wire

- 1710 Signal hook-up wire shall be stranded one conductor wire, type THW 7 strand No. 14 AWG, with a thermoplastic sheath 3/64 in. (1.19 mm) thick and a 600 volt rating. Insulation shall be color coded, as required, and labeled with gauge, voltage rating, and insulation type.

2. Signal Control Cable

Signal control cable shall be in accordance with IMSA 19-1 or 20-1 and shall be stranded No. 14 AWG wire.

3. Integral Messenger Interconnect Cable

- 1720 Integral aerial interconnect cable shall be figure "8" self-supporting type cable consisting of a messenger cable and 7 conductors No. 14 AWG signal cable in accordance with IMSA 20-3.

4. 6 Pair/19 Telemetry Cable

6 pair telemetry cable shall contain six twisted pairs of 19 gauge conductors and shall be in accordance with IMSA Specification 40-2 for underground application and IMSA Specification 40-4, integral messenger, for aerial application.

5. Fiber Optic Interconnect Cable

- 1730 Fiber optic cable shall contain four stranded multimode, graded index, optic fibers with a minimum of one non-metallic central strength member. The cable shall be loose tube, all dielectric construction, suitable for outdoor use in conduit or on aerial supports. Each individual fiber shall be 62.5/125 μ m diameter, core/clad, and each fiber shall be individually encased in its own gel-filled color coded buffer. The fiber optic cable shall be constructed with Kevlar braid and outer polyethylene jackets as a minimum. If an inner jacket is used it shall be PVC. Maximum attenuation of the cable shall be 4.0 dB/km nominal, measured at room temperature at 850 nm. The bandwidth shall not be less than 160 MHz/km, also at 850 nm. Each fiber shall be continuous with no factory splices except for joining standard length cables to form longer, continuous jacketed cable to fit installation requirements. The cable shall have standard nylon rip cords. Kevlar rip cords will not be accepted. The
- 1740 cable shall be in accordance with the generic requirements for optical fiber and optical fiber cable per Bellcore Technical Reference TR-TSY-000020.

The exterior of the polyethylene outer cable jacket shall be stenciled so that every fifth meter on each reel is marked with a number. The fifth meter of each reel shall be marked with a 5, the tenth meter marked with a 10, and so on until the end of the reel. The stencil shall be applied to the outer jacket using permanent ink and shall be permanently engraved into the jacket to provide long lasting readability.

6. Service Cable

- 1750 Traffic signal service cable shall be color coded, stranded copper No. 8 AWG wire, 3 conductor cable, type THWN.

7. Detection Wire and Sealant

a. Loop Detector Lead-In Cable

Loop detector lead-in cable shall be in accordance with IMSA 50-2 and shall be stranded 2 conductor No. 16 AWG, 19 strands of No. 29 wire.

- 1760 The nominal capacitance between conductors shall be 57 pF/ft (187 pF/m) and 98 pF/ft (322 pF/m) between one conductor and the other conductor connected to the shield.

b. Roadway Loop Wire

Roadway loop wire shall be 14 AWG gauge IMSA 51-7 duct-loop wire with polyvinyl chloride or polyethylene outer jacket of 1/4 in. (6.3 mm) diameter.

c. Sealant

- 1770 Prior to installing roadway loop wire in the roadway saw cuts, the saw cuts shall be cleaned in accordance with the requirements for the joint sealant to be used. After proper cleaning and installation of the loop wire, the saw cut shall be sealed with a joint sealant material in accordance with 906.02(a)1 or 906.02(a)2. The joint sealant

922.07

material to be used shall be compatible with the roadway materials. If polyethylene duct loop wire is used, only sealant in accordance with 906.02(a)1 shall be used. The joint sealant material shall be installed in accordance with the applicable sealant specification. However, the joint configuration shall not apply. A copy of the sealant manufacturer's written application instructions shall be submitted to the Engineer prior to any sealant operations. If the Contractor elects to use a sealant complying with 906.02(a)2, the sealant material shall be heated in a kettle or melter constructed as a double boiler with the space between the inner and outer shells filled with oil or other heat-transfer medium. This melter shall have a positive temperature control and a mechanical agitator. A backer rod shall be used for both cold applied sealants and hot poured sealants. The sealant material shall fill the saw cut as shown on the plans. All significant or objectionable surplus joint sealant on the pavement surfaces shall be promptly removed.

8. Ground Wire

The ground wire shall be copper wire No. 6, AWG soft-drawn, solid copper in accordance with ASTM B 3.

9. Splicing Kit

Splicing kits shall contain a two piece, transparent snap-together mold body and include an epoxy and sealing compound contained in a unipak. It shall be capable of insulating and splicing non-shielded cables rated up to 5 kilovolts and multi-conductor cables rated up to 600 volts.

922.07 Ground Rod and Connections

Ground rods shall be 1/2 in. (13 mm) in diameter by 8 ft (2.4 m) long with a machined point and chamfered top. They shall be made of steel with a molecularly bonded outer layer of electrolytically applied copper. The finished rod shall be cold-drawn and shall have the following minimum physical properties.

PHYSICAL PROPERTY	MINIMUM
Tensile strength	97,000 psi (668 MPa)
Yield strength, 0.2% offset	85,000 psi (586 MPa)
% of elongation	13 psi (90 kPa)

The ground rod and wire connection shall be made by a thermo weld process or approved equal. The welding material shall cover and secure the conductor to the rod and shall be porous free.

An acceptable alternate shall be a ground grid connection properly sized and shall consist of a shear head bolt, a "C" shaped body, nest, and wedge. The connector components shall be fabricated from an aluminum-bronze alloy, silicone-bronze alloy, and copper.

922.08 Castings for Handholes

The ring and cover for handholes shall be in accordance with 910.05(b).

922.09 Entrance Switch

The entrance switch shall be a single pole, 50 amp, 120 volt circuit breaker in a NEMA type 3R enclosure. The minimum dimensions of the enclosure shall be: 5 in. (127 mm) wide, 3 3/4 in. (95 mm) deep, and 9 1/4 in. (235 mm) high. A 1 in. (25 mm) rain-tight detachable hub shall be supplied in the top of the enclosure. The enclosure shall have knockouts on the sides, bottom and back with diameters of 7/8 in. (22 mm) to 1 3/4 in. (44 mm). The enclosure shall contain the circuit breaker, an insulated solid bar for connection of AC Neutral, a separate lug for attachment of earthground, have provisions for a padlock, and shall be surface mounted.

The enclosure shall be made of galvanized steel with a rust inhibiting treatment, and finished in the manufacturer's standard color of baked enamel.

922.10 Conduit and Fittings**1830 (a) Steel Conduit**

Steel conduit, couplings, and elbows shall be galvanized rigid steel conduit in accordance with UL 6. The conduit shall be galvanized by the hot dip method on the interior and exterior surfaces. Conduit threads shall be cut after galvanizing. The conduit shall be supplied with a threaded coupling attached to one end and the other threaded end protected by a suitable shield.

The various conduit fittings such as bands, bodies, straps, lock nuts, and threadless connectors, shall be in accordance with Federal Specifications A-A-50553 and shall be galvanized if not stainless steel. Conduit straps shall be two hole straps with a minimum thickness of 1/8 in. (3 mm). Conduit lock nuts 3/8 in. to 1 1/2 in. (10 mm to 38 mm) in size shall be made of steel. Other sizes shall be made of either steel or malleable iron. All conduit lock nuts shall be galvanized. Other nuts shall be either stainless steel or galvanized steel.

(b) Polyvinyl Chloride Conduit

PVC conduit shall be in accordance with ASTM D 1785, schedule 40. The PVC conduit fittings shall be in accordance with ASTM D 2466. Each length of pipe shall include a coupling.

1850 922.11 Detector Housing

The entire housing casing shall be made from aluminum alloy in accordance with ANSI 320.

922.12 Certification

Unless otherwise specified, all materials covered herein shall have a type C certification in accordance with 916.

SECTION 923 – TEMPORARY TRAFFIC CONTROL DEVICES

923.01 Temporary Pavement Marking Tape

Temporary pavement marking tape shall be furnished in two colors and two types. It shall consist of a white or yellow reflecting film on a conformable backing which is a minimum of 4 in. (100 mm) wide, and is designed for marking either asphalt or concrete pavements.

- 10 The white or yellow reflective film on the tape shall be in accordance with highway colors. The tape shall have an average thickness, as determined by 5 micrometer readings, of no less than 20 mils (0.50 mm). The type I reflective film shall have glass beads uniformly distributed throughout the reflective film. Type I and type II reflective film shall have a reflective layer of glass beads bonded to the surface.

- 20 The tape shall be supplied in rolls ready for application and have a precoated, pressure sensitive adhesive on the backing which shall not require activation procedures. There shall be no more than three splices per 50 yds (46 m) of length. It shall be shipped in standard commercial containers so constructed as to ensure acceptance by the carrier and prevent damage during shipment and storage. It shall be capable of being stored at temperatures up to 100°F (38°C) for periods of one year without deterioration.

When the tape is applied in accordance with the manufacturer's recommended procedures, it shall be weather and traffic resistant and show no appreciable fading, lifting, or shrinkage during the useful life of the line. The material shall be of good appearance, free from cracks, and edges shall be true, straight, and unbroken. The material shall be capable of performing satisfactory for a minimum of one year.

- 30 Type I tape shall be selected from the Department's list of approved Temporary Pavement Marking Tape, Type I. Temporary pavement marking tape type I will be placed and maintained on the Department's approved list in accordance with ITM 806.

Type I tape furnished under this specification shall be covered by a type C certification in accordance with 916.

- 40 The minimum reflective intensity values expressed as 0.12 Candlepower/ft²/foot candle (0.12 Candela/m²/lux) when tested in accordance with ASTM D 4061 shall be in accordance with the following table.

SPECIFIC LUMINANCE USING ENTRANCE ANGLE 86 DEGREE

Observation Angle	White		Yellow	
	0.2°	0.5°	0.2°	0.5°
Specific Luminance, Type I	1770	1270	1310	820
Specific Luminance, Type II	1000	760	820	510

923.02 Temporary Raised Pavement Marker

Temporary pavement markers shall be designed to be affixed with adhesive to the pavement surface and shall be in accordance with ASTM D 4280. Adhesive shall be in accordance with the manufacturer's recommendations.

Markers shall be selected from the Department's list of approved Temporary Raised Pavement Markers. Temporary raised pavement markers will be placed and maintained on the approved list in accordance with ITM 806.

923.03 Construction Warning Lights

Construction warning lights shall be self-illuminated by means of an electric lamp behind the lens. Types A and C shall also be externally illuminated by reflex-reflective elements built into the lens to enable it to be seen by the light from the headlights of oncoming traffic.

The batteries shall be entirely enclosed in a case. The case shall be secured by a locking device which can be opened with a special tool.

(a) Flash Requirements**1. Flash Rate**

The light from types A and B shall have a flash rate of 65 ± 10 pulsations per minute from -20°F (-29°C) to 150°F (66°C).

2. On-Time

On-time is defined as the period of the flash when instantaneous intensity is equal to or greater than the effective intensity as specified in 923.03(b)1.

a. Type A

The light shall have an on-time of no less than 10% of the flash cycle.

b. Type B

The light shall have an on-time of no less than 8% of the flash cycle.

(b) Optical Requirements**1. Effective Intensity**

The light beam projected upon a surface perpendicular to the axis of the light beam shall produce a lighted area within the solid angle bounded by the two vertical planes nine degrees from the vertical plane through the axis of the optical system and

two planes five degrees above and below the horizontal plane through the optical axis of the system.

For type A, the effective intensity shall not drop below 4.0 candles (4.0 cd) within the area specified herein during the first 336 h of continuous flashing.

- 90 For type B, the effective intensity shall not drop below 35 candles (35 cd) within the area specified herein during the first 168 h of continuous flashing.

For type C, the effective intensity shall not drop below 2.0 candles (2.0 cd) within the area specified herein during the first 168 h of continuous burning.

2. Lens Illumination

The illuminated lens shall be uniformly bright in appearance over its entire illuminated surface when viewed from any point within the angle defined in 923.03(b).

100

3. Reflex-Reflective Performance

For types A and C the specific intensity of the lens when acting as a reflex-reflector at an observation angle of 0.2 of a degree shall be no less than the following.

Entrance Angle (degrees)	Specific Intensity Candles per Footcandle (Candelas per lux)
0	18 (1.67)
10	14 (1.40)
20	7 (0.65)

4. Testing Procedure

- 110 The effective intensity of types A and B lights shall be calculated using the Guide for Calculating the Effective Intensity of Flashing Signal Lights as approved by the Illuminating Engineering Society, June, 1961. The intensity of the type C light shall be tested in accordance with SAE Standard J 575d, Lighting Equipment and Photometric Tests. Reflex-reflection shall be tested in accordance with SAE Standard J 594d.

(c) Lens Requirements

1. Size of Lens

- 120 The lens shall be no less than 7 in. (175 mm) in diameter including for a reflex-reflector ring of 1/2 in. (13 mm) minimum width around the periphery for types A and C.

2. Directional Lenses

Unless otherwise directed, types A, B, and C shall have uni-directional lenses.

3. Lens Chromaticity

If the light uses an incandescent lamp, the chromaticity of the lens color shall be defined by the tri-stimulus coordinates of the Commission International d'Eclairage Standards. When tested with illuminants from 2856 K to 2366 K, the lens color shall fall within the area of the chromaticity diagram in accordance with the 1931 Commission International d'Eclairage Standard Observer as defined by the following coordinates.

X	Y	Z
0.543	0.452	0.005
0.548	0.452	0.000
0.584	0.411	0.005
0.589	0.411	0.000

If the light uses other than an incandescent lamp, the light output shall be in the same range as the light obtained with the incandescent lamp and the specific lens.

4. Lens Luminous Transmittance

The minimum relative luminous transmittance of the lens with illuminant at 2856 K shall be 0.440.

5. Lens Material

The lens shall be plastic of one piece construction and shall meet the test requirements in accordance with SAE J 576b, except that the exposure time and condition, paragraph 3.4.3, for the purposes of this standard shall be one year.

(d) Head and Case

1. Swivel Head

If swivel capabilities as described herein are not incorporated in the device used to mount a type A or C light on a barricade or sign, the head shall be mounted on the housing in a manner permitting it to be swiveled through a minimum 90 degrees arc in a horizontal plane. If swiveling is accomplished by rotation of the head, construction shall be such that the head rotation shall not damage the wiring.

2. Case

The case shall be so constructed and closed as to exclude moisture that would affect the specified operation of the light. The case shall have a weep hole to allow the escape of moisture from condensation.

(e) Photoelectric Controls

Photoelectric controls, if provided on types A or C lights, shall keep the light operating whenever the ambient light falls below 20 footcandles (215 lux.).

923.04 Flashing Arrow Sign

The flashing arrow sign shall be an all weather, self-contained, flashing sign designed to display the required flashing messages continuously for a minimum of 24 h without servicing. A reserve storage battery shall be provided to automatically operate the flashing arrow sign for a minimum period of 8 h if there is a power failure of the primary source.

170

The flashing arrow sign shall have a control unit which incorporates a photo-controlled transfer relay for automatic lamp intensity settings. The highest photo-controlled setting shall be full intensity for daylight operation. The lowest photo-controlled setting shall be for night-time operation and shall be 50% of full intensity when the ambient light level drops below 5 footcandles (54 lux). A minimum of two interim photo-controlled settings shall automatically increase or decrease the lamp intensity in direct proportion to the ambient light level.

180 The flashing arrow sign shall have a manual control unit for adjusting lamp intensity when automatic operation becomes unsatisfactory. The manual control shall be fully adjustable between the minimum limit of 30% of full lamp voltage and maximum limit of full lamp voltage.

An indicator light shall be provided on the back of the sign to provide confirmation that the flashing arrow sign is operating. The indicator light shall be visible for 500 ft (150 m).

(a) Solar Powered

190 Solar power assisted units shall incorporate a target sight device and leveling mechanism to aid the user for positioning of the unit prior to use. The device shall be attached to the elevated portion of the flashing arrow sign and not to the fixed support frame.

The lamps shall be electronically operated by means of a solid state controller. An automatic lamp intensity regulator shall hold the lamp output constant with varying battery voltage. The control system shall incorporate a full time tracking system designed to track ambient light for 24 h a day. The control system shall adjust lamp intensity to provide maximum system efficiency. The controller shall be in a weatherproof, ventilated, lockable enclosure.

200

The lamps shall provide amber beams with a minimum of 20° horizontal and 6° vertical field of view. The minimum effective luminance within the required beam shall not be less than one half the effective luminance at the beam center.

The battery bank shall consist of 12 v, deep cycle, batteries. The battery bank shall be of sufficient capacity to power the unit for 15 days with no assistance from the sun. A battery condition indicator and a test switch shall be provided to monitor the system's battery charge. The batteries shall be secured in a well ventilated, weatherproof lockable housing. A low battery charge indicator which shall be visible

- 210 to maintenance personnel driving past the sign shall be provided to indicate the need to recharge the batteries. The battery bank shall be at full charge when delivered to the project site.

The unit shall be equipped with a sign/solar panel lifting mechanism. The lifting mechanism shall be designed to safely carry the capacity of the sign's load. The lifting mechanism shall incorporate a positive locking device to secure the panel in a raised or lowered position.

- 220 Solar power assisted flashing arrow signs to be used shall be selected from the Department's list of approved Solar Power Traffic Control Devices.

(b) Diesel Powered

Flashing arrow sign shall be fueled by diesel fuel only.

(c) AC Powered

When connected to an AC electrical power source, provisions shall be made to prevent electrocution.

FLASHING ARROW SIGN GENERAL SPECIFICATIONS

	TYPE A	TYPE B	TYPE C	SOLAR POWER ASSISTED
Minimum Board Size	2 ft (0.6 m) high x 4 ft (1.2 m) wide**	See Note Below	4 ft (1.2 m) high x 8 ft (2.4 m) wide	4 ft (1.2 m) high x 8 ft (2.4 m) wide

<p>* When flashing a single or double arrow(s), the lamp(s) nearest the arrow points shall not be illuminated.</p> <p>** Either rectangular or arrow shaped black background sign will be permitted.</p> <p>Note: General specifications for a type B flashing arrow sign are shown in the Federal MUTCD.</p>				

923.05 Temporary Worksite Speed Limit Sign Assembly

The temporary worksite speed limit sign assembly shall be an all weather, self-contained unit designed to display speed limit signs in accordance with the MUTCD and as shown on the plans. The signs shall be installed on frangible posts or mounted on movable stands or trailers in accordance with 910.14(f). The power source shall be capable of operating the strobe lights, without service, for the period which the sign is in effect. An on/off switch will be required.

923.06 Tubular Marker

- 240 The vertically placed portion of this device shall consist of high density polyethylene plastic in accordance with ASTM D 5203. The base material shall be butyl rubber in accordance with ASTM D 5900 or high impact polystyrene in accordance with ASTM D 4549. Epoxy material used to attach the base to the roadway surface shall be in accordance with the manufacturer's recommendations. The tubular portion shall be reflectorized with high intensity reflective sheeting in accordance with 919.01(b)1 as shown on the plans.

923.07 Acceptance of Temporary Traffic Control Devices

- 250 Temporary traffic control devices will be accepted by visual inspection unless otherwise indicated.

SECTION 924 – WELDING SUPPLIES

924.01 Welding Supplies

(a) Aluminum Alloy Base Metals

1. Bare Wire Electrodes and Welding Rods

- 10 Bare wire electrodes for use with the gas metal arc welding process and welding rods for use with the gas tungsten-arc welding process shall be in accordance with AWS A5.10. Tungsten electrodes for the gas tungsten-arc welding process shall be in accordance with the Specifications for Tungsten-Arc Welding Electrodes, ASTM B 297 or AWS A5.12.

2. Filler Metal

Filler metals to be used with particular base metals shall be as shown in the table below. Other filler metals may be used if approved.

	<u>Base Metal</u>	<u>Filler Metal</u>
	3003 to 3003	ER1100
	3004 to 3004	ER4043
	5052 to 5052	ER5356*
	5083 to 5083	ER5183
	5086 to 5086	ER5356*
	5456 to 5456	ER5556
	6061 to 6061	ER5356*

925.01

6063 to 6063	ER5356*
356.0 to 6061	ER4043
356.0 to 6063	ER4043

- 30 *ER5183, ER5356, and ER5556 may be used interchangeably for these base metals.

Filler metals shall be kept covered and stored in a dry place at relatively uniform temperatures. Original rod and wire containers shall not be opened until time to be used. Rod and wire shall be free of moisture, lubricant, or other contaminants. Spools of wire temporarily left unused on the welding machine shall be kept covered to avoid contamination by dirt and grease collecting on the wire. If a spool of wire is to be unused for more than a short length of time, it shall be returned to the carton and the carton tightly sealed.

40 **3. Shielding Gases**

Shielding gases shall be welding grade or better. Shielding gas for gas metal-arc welding shall be argon, helium, or an approximate 75% helium and 25% argon mixture. Shielding gas for gas tungsten-arc welding done with alternating current shall be argon. Shielding gas for gas tungsten-arc welding done with direct current, straight-polarity, shall be helium.

Hose used for shielding gases shall be made of synthetic rubber or plastic. Hose which has been previously used for acetylene or other gases shall not be used.

SECTION 925 – ITS CONTROLLER CABINET

925.01 General Requirements

ITS controller cabinets shall be constructed such that it has a NEMA 3R rating. The cabinet shall be a rainproof cabinet with dimensions of 66 in. (170 mm) in height x 24 in. (600 mm) in width x 30 in. (75 mm) in depth. The cabinet top shall be crowned or slanted to the sides to prevent standing water.

- 10 The cabinet, sunshields, doors, and all panels shall be fabricated of 1/8 in. (3 mm) minimum thickness aluminum. The only exception to this aluminum thickness is the detector rack, which shall be fabricated of 0.090 in. (2.3 mm) thickness aluminum. All exterior seams for the cabinets and doors shall be continuously welded. All exterior welds shall be ground smooth. All edges shall be filed to a radius of 5/16 in. (8 mm) minimum.

The cabinet, sunshields, doors, and all panels shall be fabricated from aluminum sheet in accordance with ASTM B 209 (ASTM B 209M), 5052-H32 aluminum sheet.

- 20 Welding on aluminum shall be done by the gas metal arc welding process using bare aluminum welding electrodes. Electrodes shall be in accordance with AWS A5.10 for ER5356 aluminum alloy bare welding electrodes.

Procedures, welders, and welding operators for welding on aluminum shall be qualified in accordance with the requirements of AWS B3.0, "Welding Procedure and Performance Qualification", and to the practices in accordance with AWS C5.6.

Each aluminum surface shall be finished in accordance with Military Specification MIL-A-8625F(1), "Anodic Coatings for Aluminum and Aluminum Alloys", type II, class I coating, except that the anodic coating shall have a minimum thickness of 0.0008 in. (0.02032 mm) and a minimum coating weight of 0.04 mg/mm². The anodic coating shall be sealed in a 5% aqueous solution of nickel acetate (pH 5.0 to 6.5) for 15 minutes at 206°F (96.67°C). The anodized coating shall be silver in color. Prior to applying the anodic coating, the cabinets shall be cleaned and etched as follows:

- 30 (a) Clean by immersion in inhibited alkaline cleaner such as Oakite 61A or Diversey 909, or equivalent, 45-60 grams per liter, 160°F (71.1°C) for 5 minutes.
- 40 (b) Rinse in cold water.
- (c) Etch in a solution of 11 g of sodium fluoride, plus 30-45 g of sodium hydroxide per liter of distilled water at 140-150°F (60-65°C) for 5 minutes.
- (d) Rinse in cold water.
- (e) Dissolve in a 50% by volume nitric acid solution at room temperature for 2 minutes.
- (f) Rinse in cold water.

50 The cabinet shall have single front and rear doors equipped with a lock. The doors shall use a Corbin lock number 2, and each cabinet shall be equipped with two number 2 keys. When each door is closed and latched, the door shall be locked. Keys shall be removable in both the locked and unlocked positions. The door handles shall have provision for padlocking in the closed position. The handle shall have a minimum length of 7 in. (180 mm) and shall be provided with a 5/8 in. (16 mm), minimum, steel shank. The handle shall be fabricated of cast aluminum or stainless steel. The cabinet door frame shall be designed so that the latching mechanism shall hold tension on and form a firm seal between the door gasket and the door frame.

60 The cabinet shall not include a police door nor have provisions for a police door.

The latching mechanism shall be a 3-point cabinet latch with nylon rollers. The center catch and pushrods shall be zinc-plated or cadmium-plated steel. Pushrods shall be turned edgewise at the outer supports and shall be 1/4 in. (6 mm) x 3/4 in. (19 mm), minimum. The nylon rollers shall have a minimum diameter of 3/4 in. (19 mm) and shall be equipped with ball bearings.

All cadmium plating shall be in accordance with the Society of Automotive Engineers, SAE-AMS-QQ-P-416, "Plating, Cadmium (Electrodeposited)". All zinc

70 plating shall be in accordance with ASTM B 633-98E1, "Electrodeposited Coatings of Zinc on Iron and Steel".

The door's hinging shall be three or four bolt butt hinges. Each hinge shall have a fixed pin. Doors larger than 22 in. (60 mm) in width or 6 sq ft (0.5574 m²) in area shall be provided with catches to hold the door open at both 90 degrees and 180 degrees, \pm 10 degrees. The catches shall be 1/3 in. (8 mm) diameter, minimum, plated steel rods. The catches shall be capable of holding the door open at 90 degrees in a 56 mph (40 kph) wind at an angle perpendicular to the plane of the door. Door hinges, pins, and bolts shall be made of stainless steel. The hinges shall be bolted to the cabinet. The hinge pins and bolts shall not be accessible when the door is closed.

80

Door gaskets shall be provided on all door openings and shall be dust tight. Gaskets shall be permanently bonded to the metal. The mating surface of the gasket shall be covered with a silicone lubricant to prevent sticking to the mating surface.

Both cabinet doors shall have louvered openings and shall provide ventilation. A filter shall be provided over the louvers and shall include an aluminum filter cover secured with a spring loaded latch as shown on the plans. The filter shall be 12 in. x 16 in. x 1 in. (300 mm x 400 mm x 25 mm). Two spare filters shall be provided with each cabinet.

90

The cabinet shall be provided with two metal lifting eyes to be used when placing the cabinet on the foundation. Each eye shall have a minimum diameter of 3/4 in. (19 mm) and shall be capable of lifting 990 lbs (450 kg).

Machine screws and bolts shall not protrude beyond the outside wall of the cabinet.

925.02 Model Approval

100 Each cabinet model shall be approved prior to use. A period of evaluation will commence when the Department receives a preliminary product evaluation form accompanied by the product brochure, detailed electrical schematics, and cabinet assembly drawings. The Operations Support Division will advise the manufacturer or vendor, in writing, of the date and location to deliver the cabinet for which model approval is requested. Electrical schematics for the cabinet, cabinet assembly drawings, and parts lists shall be furnished with the controller when it is submitted to the Operations Support Division for evaluation and testing.

110 A list of approved models will be maintained by the Department. Only models from the Department's list of approved ITS Controller Cabinets in effect as of the date of letting, or as otherwise specified, shall be used on the contract. Continued failure and repeated malfunctions of an approved controller or control equipment shall be cause to remove that model from the Department's list of approved products. A design change to an approved model or cabinet will require re-submittal of the

model for testing, evaluation, and approval. Permanent addition or removal of component parts or wires will be considered to be a design change.

925.03 Warranty

120 The cabinet, sunshields, doors, and all other exterior surfaces shall carry a five year warranty against all material imperfections. All other electrical components and wiring shall carry a three year warranty against all imperfections in workmanship or materials.

925.04 Cabinet Accessories

The following accessories shall be furnished and installed with each ITS cabinet.

(a) Rack Frame Assembly

130 The cabinet shall come equipped with standard Electronic Industries Alliance 19 in. (480 mm) rack frame assembly. The rack frame assembly shall have standard Electronic Industries Alliance vertically spaced threaded holes for attachment of equipment, mounting angles, and shelves. Frame mounting of equipment and shelves shall be available on both door sides of the cabinet.

(b) Equipment Shelves

140 The equipment rack shall be furnished with two adjustable equipment shelves. A 3 in. (75 mm) hole shall be provided in each shelf. The hole shall be fitted with a nylon snap bushing liner with an outside diameter of 3.16 in. (80 mm), inside diameter of 2.5 in. (63 mm) and a height of 0.72 in. (18 mm). The shelves shall be constructed of an aluminum screen tack welded between the shelf bottom and upper ribs. The shelves shall be capable of being moved in any location.

(c) Sunshield

An aluminum panel sunshield shall be mounted on standoffs on the top and each side of each cabinet.

(d) Side Panels

150 Two aluminum side panels shall be provided and mounted on the Electronic Industries Alliance rack parallel to the cabinet sides. One panel shall be designated as the “power distribution panel” and the other panel shall be designated the “heater panel”.

(e) Data Pocket

The data pocket is to be large enough to hold several drawings, a maintenance log notebook, and several pieces of reference material but not so large as to contact any of the installed equipment.

(f) Equipment Labels

The labels shall have a non-reflective, exterior grade, low glare matte surface finish applied to flexible ABS plastic. The labels shall be black with white lettering

and have an engraving depth of 0.002 in. to 0.003 in. (0.0508 to 0.0762 mm). Labels shall conform to the designations on the cabinet diagrams.

(g) Primary Power Terminal Block

A power distribution terminal block shall be mounted on the power distribution panel. The power distribution block shall be a mechanical three pole connector. The connectors for the incoming power shall be able to accept wire sizes between 12 AWG and 2/0 AWG. The load side connectors shall be able to accept wire sizes between 14 AWG and 4 AWG. The rating of the connector shall be 195 amps per pole. The connector elements shall be made from a tin plated, high conductivity aluminum alloy and insulated with high strength thermoplastic housing with a relative temperature index of 260°F (125°C). It shall be rated 600 volt, AL9CU. The dimensions shall be 4 in. x 5.2 in. (100 x 132 mm) x 3.23 in. (82 mm) high. The block shall come with one polycarbonate safety cover per pole. Mounting screws shall be No. 10, 0.19 in. (4.83 mm) diameter. The block shall be UL Listed. The terminal block shall be a Burndy Model BDB-11-2/0-3.

(h) Ground Lug

The ground lug mounted on the power distribution panel shall be a heavy-duty 1-hole ground lug, manufactured from electrolytic copper tubing and strip stock. UL Listed and CSA certified for stranded CU wire and for 600 volts. Wire range: 6 AWG - 14 AWG. Bolt size: #10. Tang length shall be 1/2 in. (13 mm). Width shall be 5/16 in. (8 mm). The lug shall be an IlSCO Model SLUH-35.

(i) Ground Bus

Rated to 600 volts. 12 taps per ground bar suitable for wire ranging from 6 AWG to 14 AWG. Main ground connection wire range from 4 AWG to 14 AWG. The ground bar shall have a length of 5 15/16 in. (150 mm), a height of 3/4 in. (19 mm), and a width of 1 1/32 in. (9 mm). It shall be UL Listed. The ground bus shall be an IlSCO Model D167-12.

(j) Transient Voltage Surge Suppression

The transient voltage surge suppression, TVSS, shall have individually fused suppression modes, thermal cutout, operational indicators (LED) to indicate loss of protection or circuit fully operational, including neutral-to-ground, AC tracking filter with EMI/RFI filtering up to -50dB from 100 kHz to 100 MHz, and a short circuit current rating of 200,000 rms symmetrical amperes. Surge suppression shall be provided for each mode (L-N or L-L, L-G, N-G). The TVSS shall be UL 1449 Second Edition Listed and UL 1283 Recognized. The TVSS shall have 120/240 volt split phase service voltage and dry contacts for each phase providing a summary alarm. The contacts are terminated in a DB-9 connector.

The surge capacity shall be 80 kA/phase. The response time shall be less than 1/2 nanosecond. The unit shall withstand 5000 category C3 impulses with less than 10% drift. It shall be suitable for use under non-condensing relative humidity range of 0 - 95%. The suppressed voltage rating shall be 330 volts L-N, L-G, N-G and 700

volts L-L. Operating frequency: 47 - 63 Hz. Operating temperature: -40°F to 140°F (-40°C to +60°C). External mount NEMA 1 standard enclosure. Standard size: 6 in. (150 mm) long x 6 in. (150 mm) wide x 4 in. (100 mm) depth. Weight: 8 lbs (3.63 kg). The TVSS shall be UL 1449 Second Edition Listed, 1283 Recognized and CUL. The unit shall be an Advanced Protection Technologies Model TE/1XF.

210

(k) Load Center Main Breaker

The load center main breaker shall be enclosed 2 pole, 240/240 volt AC, 60 amp. It shall have a 10,000 rms symmetrical ampere short circuit current rating. The circuit breaker enclosure shall be a Square D, Model QO2TR.

(l) Load Center Panelboard

The panelboard shall be a 120/240 volt AC, 600 volt, 8 pole panelboard. The panelboard shall have a neutral bus bar with three 10 amp breakers, four 15 amp breakers and one spare. The load center shall be main lug only Square D, Model QO.

220 The circuit breakers shall be Square D, Model QO.

(m) GFI Duplex Receptacle

The convenience receptacle shall be a duplex, 3-prong, NEMA type 5-15R grounding type outlet and shall be in accordance with UL Standard 943.

(n) Duplex Receptacle

A standard 3-prong, NEMA type 5-15R grounding type outlet shall be mounted on the power distribution panel.

230

(o) Terminal Strip Surge Protector

One 48 in. (1220 mm) surge protected terminal strip with ten 15A outlets shall be furnished and installed.

The terminal strip shall have a low profile aluminum housing measuring 1 1/2 x 1 3/16 in. (38 mm x 30 mm) and have a 14/3 SJT cord and a NEMA 5-15P plug. The spacing between the outlets shall be 4 in. (100 mm) and the grounding pin shall be positioned so that it is oriented toward the bottom of the cabinet. The unit shall be in accordance with UL Standard 1449 with a 330 volt clamping level. The unit shall be a Wiremold Model 4810BCS with a 6 ft (2 m) cord.

240

(p) Door Open Switches

Four dry-contact, 1-pole-form-C (single-pole, double throw), switches shall be provided and installed. Switch poles are to be electrically isolated. One set of switches shall be rated for 5 amp at 120 volt AC to be used to automatically turn the lights off when both cabinet doors are closed. The other set shall be rated for 1 amp at 5 volt DC and are to be used to send a door open alarm. The switches shall be Omron part No. Z-15GQ-B.

(q) Light Switch

- 250 A toggle switch 20 amp, DPDT with 0.125 in. (3 mm) diameter hole in solder lugs shall be provided and installed that will manually switch on the lights regardless of the door switch position. The switch shall be McGill Mfg. Co., part No. 0121-7013 or Eaton part No. 7803K13.

(r) Lamp Holders

- Each cabinet shall be furnished with two lamp holders. The UL Listed device shall have a medium phenolic base measuring 1.9 in. x 1.9 in. x 1.5 in. (48 mm x 48 mm x 38 mm) and rating 660 watt and 250 volt. The lampholder shall be a Leviton Model 9063.

260

(s) Lamps

Each lamp holder shall be provided with a 100 watt rugged service incandescent bulb.

(t) Circulating Fans

- 270 Three 110 cft/min (3 m³/min), 4.7 in. x 4.7 in. x 1.5 in. (120 mm x 120 mm x 38 mm) cooling fans shall be installed within the cabinet to circulate internal air. The fans shall have an allowable ambient temperature range of ~14°F to ~158°F (~-10°C to ~+70°C) and a voltage rating of 115 volt. The fan casings shall be aluminum alloy. The impeller shall be UL94V-O reinforced plastic. The fans shall have ball bearings and an impedance protected, shaded pole induction motor. The fans shall not be exposed or routed to the external environment. The environmental controller shall control fan operation. The fans shall activate at 80°F (27°C). The fans shall be NMB Model 4715FS-12T-B50-D00.

(u) Enclosure Heaters

- 280 Two 250 watt ceramic insulated strip heaters shall be furnished and installed in the cabinet to protect against condensation damage and to keep the electronic components above freezing in the winter. The strip heaters shall have a seamless stainless steel sheath with ceramic element support and magnesium oxide packing. The environmental controller shall control enclosure heater operation. Heating strips shall not be installed on either door. The heaters shall be 8 in. (200 mm) long by 1 1/2 in. (38 mm) wide and shall have two wire terminals. The strip heaters shall be UL Recognized. The heaters shall be Hotwatt Model CS-8.

(v) Heater Relays

- Two solid state SPST-NO heater relays shall be installed on the power distribution side panel. Load current range 0.04 to 25 amp, one-cycle surge 250 amp peak. Rated for 120 volt AC and UL Recognized.

290

(w) Thermostats

The cabinet shall be furnished with two thermostats installed. One thermostat shall activate the enclosure heaters and circulating fan with the internal cabinet temperature goes below 35°F (2°C). The other thermostat shall activate the two

circulating fans at the top of the cabinet when the internal cabinet temperature goes above 80°F (27°C). The thermostats shall be Thermodisc, Type AL-1.

(x) Detector Card DIN Rail Terminal Blocks

300 Double-deck compression clamp DIN rail terminal blocks shall be hard wired to the Canoga Card Racks. A total of 64 terminal blocks shall be mounted to an aluminum panel that is secured to the Electronic Industries Alliance rack. The terminal blocks shall allow wires between 24 AWG and 10 AWG. Each measures 2.5 in. x 0.2 in. (65 mm x 6 mm). The terminal blocks shall be the Entretec part number 011527122 type M 4/6 D2.

(y) I/O Module

310 An isolated 8-Bit digital input module shall be provided and installed. It shall have 6 fully isolated inputs and 2 share common ground inputs. High voltage inputs. Logic levels: LOW +1.0 volt DC max, HIGH +3.5 to +30 volt DC. Input impedance: 3 kohm. Input isolation: 3000 vrms. Power consumption: 0.4 watt. Operating temperature: 14°F (-10°C) to 158°F (70°C). The I/O module shall be a Measurement Computing, Model CB-7052.

(z) Detector Card Rack

The detector card rack shall be as shown on the plans.

(aa) Padlocks

320 Padlocks shall be classified as a high security padlock with hardened shackles, laminated body, a minimum 4 pin cylinder, and come complete with a weather cover to protect the lock body and cylinder from sand, dirt, water, and ice. A wafer cylinder shall not be used. Keys shall not be provided with each padlock supplied. All padlocks shall be keyed alike and shall be keyed identical to the keys currently in use by the Department. The main body width of the padlock shall not exceed 3 in. (75 mm) and shall have a shackle length of 2 1/4 to 3 3/4 in. (56 to 94 mm) and a shackle diameter of 5/16 in. (8 mm). For padlock information, contact the ITS Operations Engineer.

(bb) Other Cabinet Equipment

330 In addition to the equipment specified above, the cabinet shall be furnished with all ancillary equipment, brackets, wiring ducts, hardware, etc, as is necessary to provide a neat and finished appearance. These items along with all associated cables, connectors, wiring, etc. shall be labeled on the required submittal drawings.

925.05 Cabinet Wiring

All conductors used in ITS cabinet wiring shall be in accordance with the following color-code requirements.

(a) The AC neutral conductor of a circuit shall be identified by a continuous white or natural gray color.

340

- (b) The equipment grounding conductor shall be identified by a continuous green color or by a continuous green color with one or more yellow stripes.
- (c) The ungrounded conductors shall be identified by any color not specified in a or b above.

350 All wire shall be type THHN with color and gage as shown on the plans with the exception of the microloop card rack wiring which will be 2-pair twisted with a shield and plentium rated.

Connectors used for interconnecting various portions of circuits together shall be designed and constructed for the application involved. Connectors shall be designed to provide positive connection of all circuits, and easy insertion and removal of mating contacts. Connections shall be permanently keyed to prevent improper connection of circuits.

925.06 Drawings

360 The Contractor shall provide three sets of cabinet wiring diagrams. The diagrams shall be non-proprietary and shall identify all circuits, as installed, in such a manner as to be readily interpreted. In addition, three cabinet drawings shall be provided with each cabinet to show the component layout in elevation views from the front and rear. An elevation of both aluminum side panels shall also be shown. Elevation views are to be detailed down to the level showing mounting brackets and wiring ducts. All other mounting hardware and cable ties need not be shown. All cables and connectors shall be clearly labeled. Any data sheets for internal cabinet components that have been made available by the manufacturer shall also be provided. One set of the wiring diagram and cabinet drawing shall be placed in a heavy-duty side-opening clear plastic pouch and inserted into the data pocket. The
370 pouch shall be of such design and material that it provides adequate storage and access to the drawings. The other two sets of drawings shall be delivered to the attention of the ITS Field Engineer.

SECTION 926 – MISCELLANEOUS MATERIALS

926.01 Flexible Delineator Posts

Flexible delineator posts shall be made of high density polyethylene plastic in accordance with ASTM D 5203. The post shall be straight along its center line and have a smooth surface free from cracks, flaws, seams, laps, blisters, and edges affecting the strength, durability, or appearance. The cross section width shall not exceed 6 in. (150 mm).

- 10 The reflective sheeting on the post shall be in accordance with 919.01(b) and shall have minimum dimensions of 3 in. (75 mm) by 8 in. (200 mm). Reflective sheeting shall be applied directly to the post and protected in a manner that minimizes damage to the sheeting upon impact.

The color of the post and the reflective sheeting shall match the color of the adjacent edgeline.

- 20 When installed, the flexible post shall withstand, without damage, five vehicle impacts at ambient air temperatures of 32°F (0°C) and at 85°F (30°C) each. The vehicle impacts shall include both bumper and tire impacts. It shall be able to bend to an angle of 85 degrees from vertical and right itself to within 10 degrees of the vertical immediately and stand erect within 4 h within the same ambient air temperature range.

Only flexible delineator posts from the Department's list of approved Flexible Delineator Posts shall be used. Flexible delineator posts will be placed and maintained on the Department's approved list in accordance with ITM 806, procedure G.

30 **926.02 Delineators**

(a) Acrylic Plastic Delineators

Acrylic plastic delineators shall consist of a hermetically sealed optical system with a circular plastic face and prismatic molded rear surface. The optical system shall have a minimum diameter of 3 in. (75 mm) with a minimum area of approximately 7 in.² (4520 mm²). The trademark of the manufacturer shall be molded legibly into the face of the lens. Color shall be clear, red, or yellow in daylight as well as when viewed by reflected light at night. Photometric or optical requirements shall equal or exceed the following minimum values.

40

Observation Angle Degrees	Entrance Angle Degrees	Specific Intensity Candle Power/Footcandle (Candelas/lux)		
		Clear	Yellow	Red
0.1	0	119 (11.1)	79 (7.3)	28 (2.6)
0.1	20	47 (4.4)	28 (2.6)	11 (1.0)
Note: The observation angle is the angle at reflector between the observer's line of sight and direction of light incident on reflector. The entrance angle is the angle at the reflector between the direction of light incident on it and the direction of reflector axis. The specific intensity is the candlepower returned at the chosen observation angle by a reflector or reflective surface for each footcandle (lux) of illumination at the reflector.				

The opaque backing shall be made from aluminum sheet having a minimum thickness of 0.02 in. (0.5 mm). The backing shall form an integral part of the delineator and shall retain the optical system securely. A single aluminum grommeted hole in the center of the reflector shall be provided for mounting. The inside diameter of the grommet hole shall be 3/16 in. (5 mm).

Only acrylic plastic delineator models and colors from the Department's list of approved Delineators shall be used. Acrylic plastic delineators will be placed and maintained on the Department's approved list in accordance with ITM 806, procedure G.

(b) Reflective Sheeting Delineators

Reflective sheeting delineators shall consist of reflective sheeting affixed to an aluminum backing material. The white delineator shall be 3 in. by 8 in. \pm 1/8 in. (75 mm by 200 mm \pm 3 mm). The yellow delineator shall be 5 in. by 5 in. \pm 1/8 in. (125 mm by 125 mm \pm 3 mm). The backing material shall be in accordance with 919.01(a) except the minimum thickness shall be 0.064 in. (1.6 mm). Reflective sheeting shall be in accordance with 919.01(b).

60

There shall be two mounting holes, 3/16 in. (5 mm) in diameter, with one at the top and one at the bottom. The holes shall be 6 in. \pm 1/16 in. (150 mm \pm 2 mm) center to center and in the corners of the square units. Completed delineators shall be dip coated with a high gloss clear finish coat as specified and supplied by the sheeting manufacturer. The finished units shall be clean cut, sharp, and have essentially a plane surface.

Material furnished under this specification shall be covered by a type C certification in accordance with 916.

70

(c) Barrier Delineators

The delineators shall consist of a transparent acrylic plastic face, herein referred to as the lens, and an opaque back fused to the lens under heat and pressure around the entire perimeter to form a unit permanently sealed against dust, water, and water vapor. The reflector lens shall be colorless.

The lens shall consist of a smooth front surface free from projection or indentations other than for purposes of identification or orientation of the reflector. The rear surface shall have a prismatic configuration such that it will effect total internal reflection of light. The manufacturer's trademark shall be molded legibly into the face of the lens.

80

The reflector lens, having a minimum effective reflex area of 6.5 in.² (4194 mm²), shall be methyl methacrylate in accordance with Federal Specification LP-380C, type 1, Class 3. Photometric or optical requirements shall equal or exceed the minimum values in 926.02(a).

Only barrier delineator models and colors from the Department's list of approved Delineators shall be used. Barrier delineators will be placed and maintained on the Department's approved list in accordance with ITM 806, procedure G.

90

(d) Temporary Barrier Delineator

Temporary barrier delineators shall consist of a type III sheeting in accordance with 919.01(b)1 affixed to a reboundable substrate. The delineator shall be 8 by 12 in. (200 by 300 mm) vertically mounted. The mounting bracket used to affix the delineator to the barrier shall not be more than 3 in. (75 mm) vertical.
